WATCH BUYERS, ATTENTION

The celebrated Borel and Courvoisier Watches were awarded the first prize in London in '62, grand prize at Paris in '67, first prize at Centennial in Philadelphia, and lastly gold medal at Paris in '78. These watches have stood the test for the past 20 years, and pronounced by best judges equal to any made. They all have Nickel Movements, Tempered and Hardened Breguet Hair Springs. Ischromised for railroad use in Key and Stem Winders, with all modern improvements in the art of watch making. Large numbers are in use on the principal railroads in the country. As a guarantee that they are what we claim for them, we refer by permission to the dealers named below who have sold them for years:

A. W. Brant, Fairport, N. Y.
Joseph Moulton, Worcester, Mass.
G. W. Fairchild, Bridgeport, Conn.
George Embrey, Morrow, Ohio.

ASK FOR
Wells, Richardson & Co's PERFECTED BUTTER COLOR
It Gives Butter the gilt-edged color the year round. The largest Butter Buyers recommend its use. Thousands of Dairymen say **IT IS PERFECT.** Used by all the best Creameries. Awarded the International Diploma at N. Y. Dairy Fair. Ask your druggist or merchant for it; or write to ask what it is, what it costs, who uses it, where to get it. **WELLS, RICHARDSON & CO., Proprietors, Burlington, Vt.**
USE ONLY THIS THE FIRST AND THE BEST

Humorous.

"It is true," said an old philosopher, "that two heads are usually better than one, but it never could be thus with the two heads on the same pin."

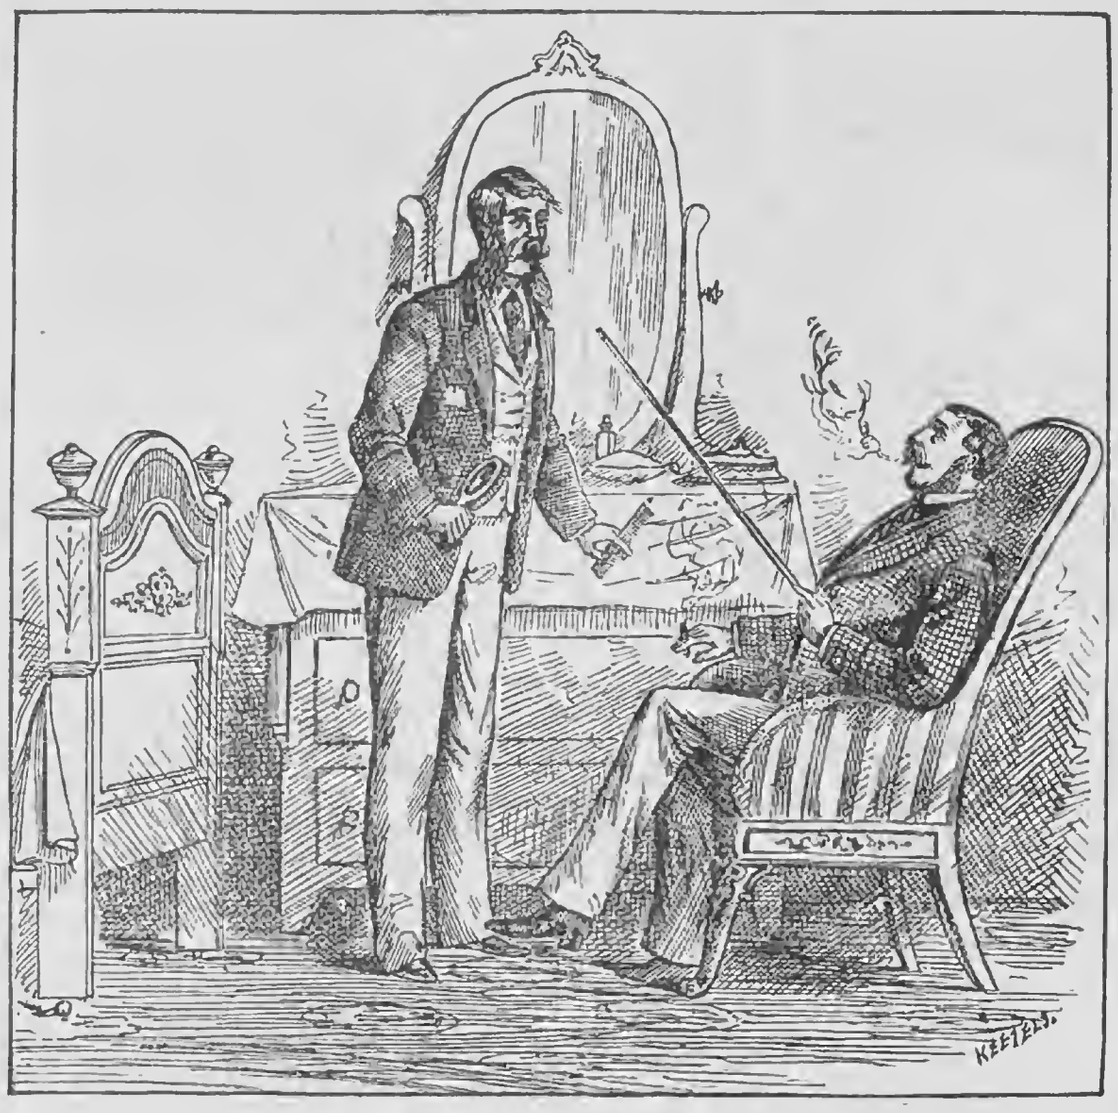
The boy who left the piece of ice in the sun to warm up, was no more foolish than the man who opened the store and expected people to hunt him out and buy his goods, without advertising.

A man who married a Jewess shortly afterwards joined the temperance society, and never dared to kiss his wife from that day, because he had considered himself prohibited by the pledge from meddling with Jew-lips.

He said he was bashful, and blushed painfully, and asked her if she could spell bashful. She said she might do it on a pinch, and spelled it b-a-s-h-f-o-o-l. Then he looked uneasily at her and began to wonder if she were unutterably ignorant or superlatively sarcastic.—Lampton.

A five-year-old son of a family the other day stood watching his baby brother, who was making a great noise over having his face washed. The little fellow at length lost his patience, and stamping his foot, said: "You think you have lots of trouble, but you don't know anything about it. Wait till you're big enough to get a lickin' and then you'll see—won't he, mamma?"

A notion seller was offering a Yankee clock, finely varnished and colored and with a looking glass in front, to a certain lady, not remarkable for personal beauty. "Why, it is beautiful," responded the vender. "Beautiful, indeed! a look at it almost frightens me," said the lady. "Then, marm," said Jonathan, "I guess you'd better take one that ain't got no looking glass."



PHILOSOPHICAL.

Jones—"Why, Brown, how gray you're getting!"
Brown—"Ah ha! I don't mind how *gray* I get, so long as I don't get *blue*."

One of the Impossibilities.

Among physical impossibilities is that of enjoying bodily vigor while digestion is disturbed, the bowels are irregular, or the secretion and flow of bile interrupted. To correct these conditions which interfere—as they surely do—with the acquisition of strength and flesh, the dyspeptic, constipated invalid should use Hostetter's Stomach Bitters, a medicine which has been accorded the highest sanction in professional quarters, and which time and experience have proved to be deserving of the popularity which it has gained on its merits. Whether chronic disorders of the digestive or secretive organs is due, as is usually the case, to a want of vigor and activity, or to temporary irregularity in the performance of their functions, the Bitters has invariably been found adequate to the task of furnishing those organs with renewed vigor or permanent regularity.

The request often made by publishers that readers will mention their journals when answering advertisements, seems to us a very reasonable one. Such mention is a helpful and friendly act to the journal mentioned and enables the advertiser to determine which journals are the best advertising mediums. Reference to our advertising columns will show there is not one advertisement of an exceptional or ambiguous character admitted. In so far as this is possible we hold ourselves responsible for their high-standing and trustworthiness.

THE RURAL NEW-YORKER

A JOURNAL FOR THE SUBURBAN AND COUNTRY HOME

VOL. XXXIX. No. 48. WHOLE No. 1609. | NEW YORK, NOV. 27, 1880. | PRICE FIVE CENTS. $2.00 PER YEAR.

[Entered according to Act of Congress, in the year 1880, by the Rural New-Yorker, in the office of the Librarian of Congress at Washington.]

The Herdsman.

HIGH-BRED DUTCH (OR HOLSTEIN) CATTLE.

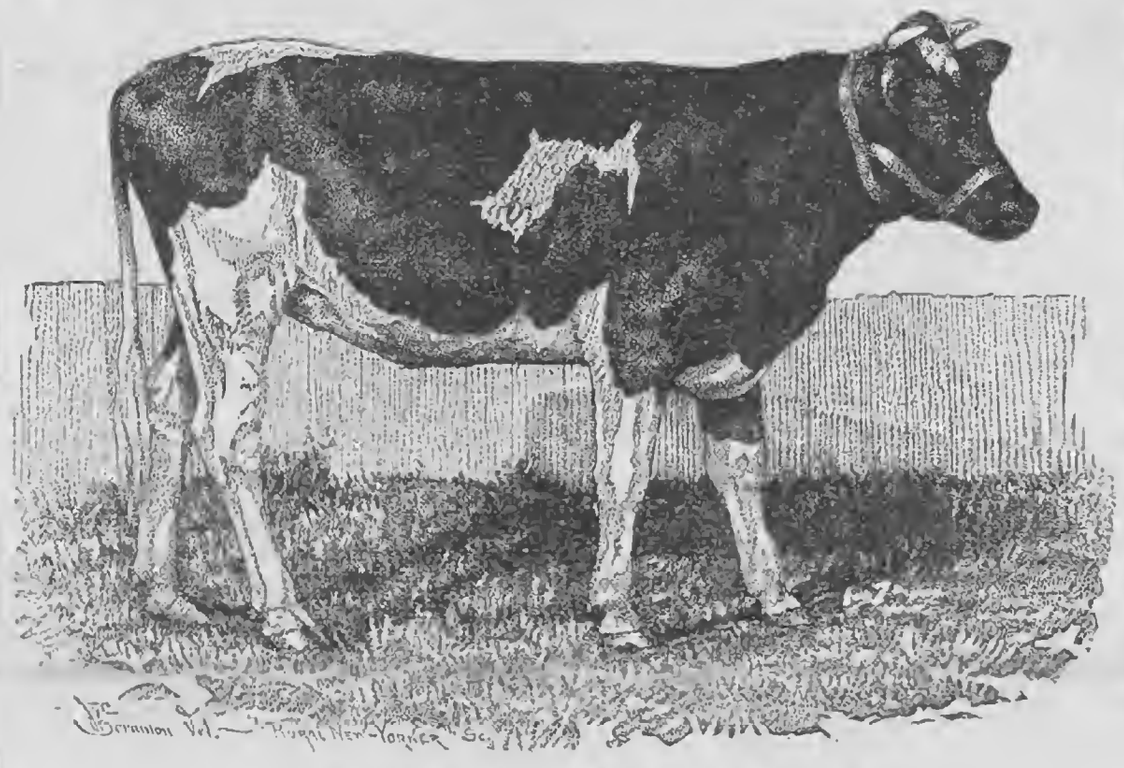
WE secured pictures of several of the prize animals at the recent show of the New York Agricultural Society at Albany, and in presenting our readers a portrait of the fine bull "Billy Boelyn" and of the two beautiful heifers "Nannie Smit" and "Panacea," offer a short sketch of the herd, sincerely regretting that the noble cows "Ondine" and "Johanna,"—the former a first prize winner at Rotterdam in 1878—would not stand still enough for our photographer to get their pictures.

The Kriemhild Holstein Herd.

This admirable herd imported, bred and owned by Mr. Gerrit S. Miller, of Peterboro, New York, is only eleven years old. Mr. Miller brought in the year 1869 four animals selected by his brother who had been led to prefer this breed because he had witnessed the accurate testing of the several prominent breeds in comparison with one another at the German agricultural school which he had been attending. This breed has attained such popularity within half a dozen years, that it is hard to realize that at the time spoken of Mr. Winthrop Chenery of Boston stood almost alone as an importer and breeder of these, yet so it was. These four animals, "Hollander," "Dowager," "Crown Princess" and "Fraulein," soon began to attract the attention of dairymen and farmers of Madison County and vicinity, and it only took one season to convince them of the great excellence of the breed for milk, independent of its beef qualities. Mr. Miller bred from these animals until '73, when he exhibited a herd at our State Fair in Albany. The competition was strong, the 1st prize herd from the New England Fair and the 1st prize herd from the Rhode Island State Fair, in addition to a fine lot imported by T. E. Whitney, were in the *show ring*, yet he took the herd prize, 1st and 2nd on cows, 2d on two-year-old heifers, 1st and 2d on yearling heifers, and 1st on aged bull. This was quite encouraging. In 1874 at Rochester and at Utica the herd was equally successful. From that date to this Autumn he has not exhibited at any fair. In 1876 six head were imported, "Billy Boelyn" among the number. An old cattle dealer of Holland of 25 years' experience, spent a week in hunting up this bull, and when he returned with his prize said, "he was as fine a bull as could be found in that country." In 1878 Mr. Miller imported eight heifers and the cow "Johanna"—winner of the 1st prize as milch cow at Albany this year—was among the lot. In January, 1879, he visited Holland again and selected seventeen as good animals as he could find. Among this number was the dam of the 1*st prize bull at the Paris Exposition*, said to have given 95 pounds of milk per day; unfortunately this cow died the day she arrived in port. Another of this lot, "Empress," said to have given 108 pounds per day was nearly used up by the unusually rough passage. These cattle were selected for their great milking capacity coupled with beautiful straight forms, fine bone, good size, and for having all the escutcheon that could be found with the true milking form. In September of the same year, Mr. Miller's last importation, also of 17 head, was selected on the same principle. This herd won at our State Fair in Albany this year the large gold medal under strong competition. It is the third time the herd has been exhibited at the State Fair and it has *won the herd prize each time*.

"Nannie Smit" won the 1st prize as a two-year-old. She was selected by Mr. Miller from the herd of GERRIT SMIT, in Holland. She dropped her first calf last June and produced in thirty days 1,293 pounds of milk, the largest yield in one day was 50 pounds. In addition to her great milking powers, she has a beautiful, straight, broad back, is deep in the hindquarters, light in front and carries an udder, perfect in form.

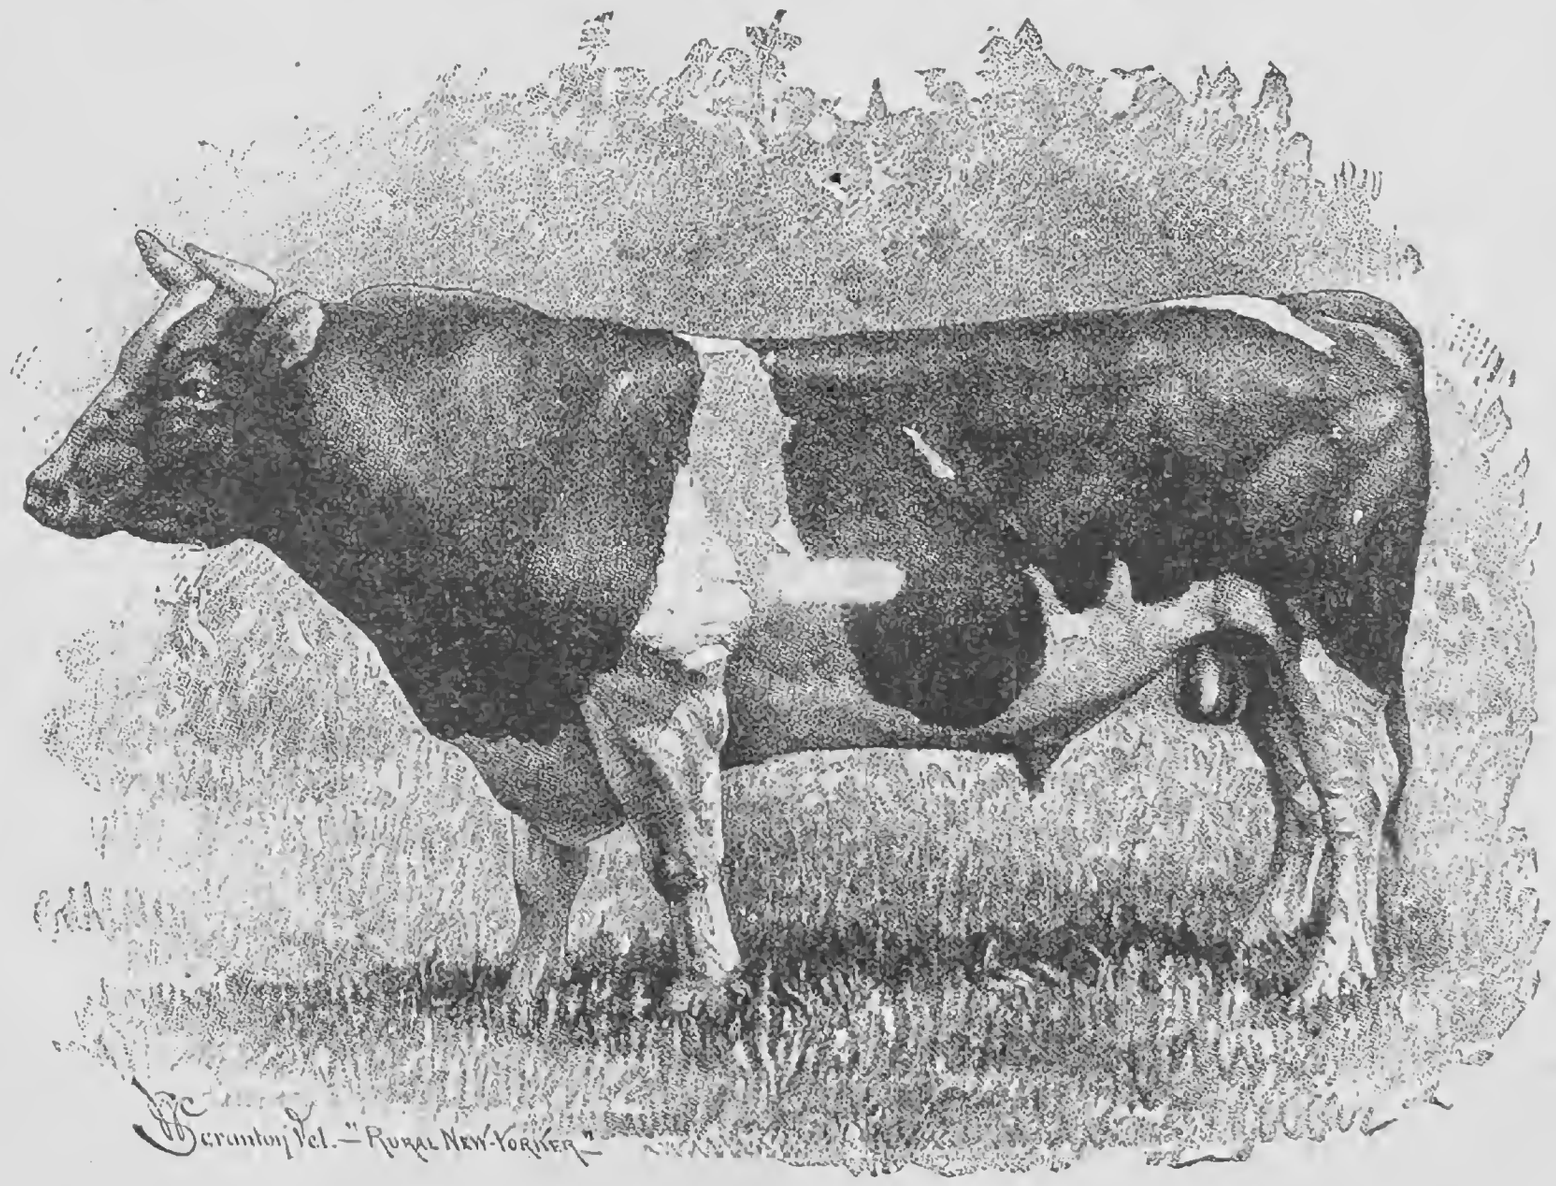
"Panacea" won 1st prize as a one-year-old, a daughter of Billy Boelyn and an animal of remarkable form and substance for her age.



PANACEA, ONE YEAR OLD.—FROM LIFE.—FIG. 376.

Her dam "Pansy" is a deep milker (having given over 6,000 pounds of milk as a two-year-old) and is now owned by Messrs. Forbes and Hall in Colorado.

"Billy Boelyn" (2d prize bull) is a very perfectly formed bull. He is long, low, straight and broad and unusually well filled in all points; his stand is perfect, legs strongly set wide apart; his weight is 1872 pounds. He has proved a valuable breeder and imprints his form on most of his get, two of which took 1st prize at this fair. He was calved in 1875. "Empire" (1st prize bull calf) sired by "Billy Boelyn," dam "Empress," is an elegant calf resembling both sire and dam and is to be the head of the future herd.



HOLSTEIN BULL, (Billy Boelyn.)—From Life.—Fig. 377.

NOTES BY A STOCKMAN.

IN keeping sheep for profit the great point is to secure cheap pasture. Where wool alone is the source of income cheap land is an absolute necessity and the supply of this is rapidly diminishing. There are few localities left in the United States where land can be procured in large tracts for 50 cents to one dollar per acre or even less than 50 cents. But such tracts can yet be procured in the mountain regions of Southwestern Missouri, West Virginia and North Carolina where the climate is all that can be desired.

A pastoral life has many attractions for persons of quiet, easily satisfied dispositions. Others had better never contemplate keeping sheep, for there can be no success without patient and persistent "sticking to it." There is no excitement about the business, but slow growth and gradual progress only. It is somewhat of a "humdrum" character year in and year out and that suits but few Americans. But one who begins, cannot leave off without loss; there is nothing to be done but to go on and work and wait for a few years. Those who look for excitement and to make money by the jump should avoid sheep keeping. Peculiarities of breed and character are, as one might say, "local issues." These peculiarities are formed and fixed by the character and circumstances of distinct localities. Thus every distinct kind of breed of sheep, cattle or horses possesses its distinct mark which is often lost as soon as the locality is changed. A notable instance is afforded by the Jersey cow which in America has lost its original angularity and boniness and has become smooth, fine-boned, larger-bodied and of much handsomer form. Compare old Duchess which was owned some years ago by Mr. Sharpless of Pa., with the modern Filbert or the daughters of Alpha and Eurotas. The climate and soil of America have a more refining influence than the ocean breezes of Jersey, and this breed here becomes superior in every way to the old stock from its native fields. As Americans use the English language with greater propriety and elegance than the English themselves, so the English cattle are surpassed by their descendants of American birth.

With sheep this is still more conspicuous, and instead of trying to keep sheep up to a sort of cosmopolitan standard, we should strive to procure some good local varieties and breed these to perfection. If England and its sister provinces of Wales and Scotland and Ireland possess twelve or fifteen distinct breeds of sheep, we might possess fifty, each thriving best in its own native place, and in time we might become the source from which the rest of the world should procure their means of improvement. This should be the

alm of America, first in peace, first in war, and first iu all the arts and industries.

A Western breeder states that his steers sired by a pure-bred Short-horn bull are now selling at $50 per head, while those sired by a grade bull are bringing $30 to $40. The difference is about the usual rate, and is sufficiently large to give a handsome profit every year on an investment of $200 in a good pure-bred bull. This note is well worth noting by every farmer whom it may concern.

It is difficult to discover any person who has made a single dollar out of Angora goats except the breeders. There are the breeders and their victims; the former make the money and the latter lose it. There are many persons to be found who have paid $50 for a pair of goats, or even more, and who have been glad to bestow them upon a friend after a year or two of experience with them, and the friend might well have said, "an enemy hath done this," as soon as he had discovered the hollowness of the goat delusion. Still one may read now and then of a new victim paying his $50 for experience in this line of business, in which the profit is all on one side.

What is the cost of so insignificant an insect as the cattle gad-fly: *Œstrus bovis?* $250,000 yearly is said to be the loss occasioned by the damage to the hides every year that are sold in the Chicago market alone, by reason of the perforations made by the grubs in the skin. A difference of two cents a pound is made on one-fourth of the 50,000,000 pounds of hides sold yearly in Chicago, on this account. The total loss in America may then easily be one million dollars annually, and yet this pest might be exterminated if owners of cattle would set about it.

Sheep Husbandry.

STARTING IN SHEEP HUSBANDRY.

I AM glad to see a little more interest manifested through the RURAL in that profitable animal, the sheep. I think that all farmers—dairymen not excepted—should keep at least a few sheep. But in starting one must not enter the business blindfolded; for he has a number of things to take into consideration. Among these is his proximity to market. If near a good market, perhaps mutton sheep would be the best for him to select. If not near a market, which is my own condition, he must make both wool and mutton his object. He must also consider the lay of his land, in order to determine what size sheep is best for him. If very rough and barren, choose the small and active kind, as they are the best foragers. If the land is only moderately rolling and of medium productiveness, the novice in sheep-keeping must select animals of medium size; but if his land is level and rich, producing excellent pasture, he must take the large kinds of sheep—the larger the better. It will follow as a matter of fact that the small sheep will, or at least should, produce a fine, short, close fleece; the medium size, a fleece of medium length and quality; and the large ones, a long, coarse fleece as a rule. Now the majority of farmers are so placed with regard to the character of their land and distance from market that they should keep medium-sized sheep and grow a medium quality of wool; and as a greater part of our clothing is made from this sort of wool, we are sure of a market.

But I do not mean to say that starting right is all that is necessary to make sheep husbandry profitable — far from it. The man who keeps sheep must always strive to increase the profit derived from his flock; and in so doing he will improve its quality. He must strive to improve the hardiness and constitution, compactness and quality of fleece of his flock as well as their mutton qualities. He must be very careful in selecting his breeding ewes, and still more careful in choosing his rams; for in breeding from a poor ewe her offspring alone suffers from her inferior quality, whereas the qualities of a ram, be they good or bad, affect all his progeny; hence a person should use his best judgment in selecting his rams for breeding. Do not breed from a ram that only cost five dollars, thinking that he is cheap; for he is not, no person can raise a good breeding ram for five dollars. Better by far pay $25 for a good one, for there is such a thing as being "penny wise and pound foolish," and this saying is applicable to the farmer who is not careful enough in selecting good males for breeding. I can breed up a flock of sheep that will suit me better and give more profit than a flock of any established breed of sheep in existence. I think if a man tries, he can breed a flock of sheep that will suit his particular location better than this can be done for him by any person in the Old Country or anywhere else. We want some flocks of thoroughbred sheep, of course, to get our breeding rams from, but we do not all want them, or at least that is my experience.

Cortland County, N. Y. S. E. M.

Dairy Husbandry.

THE DAIRY COW—NO 17.

HENRY STEWART.

Furniture for Dairies.

THE proper furnishing of a dairy has much to do with the convenience, economy and quality of the work done in it. Time and labor are saved, and cleanliness is secured by an effective yet simple arrangement of the shelves for holding the pans. In family dairies the milk is kept, sometimes necessarily, in a room or a cellar. Where one or two

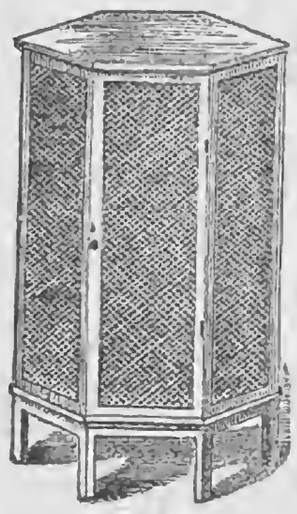


FIG. 376.

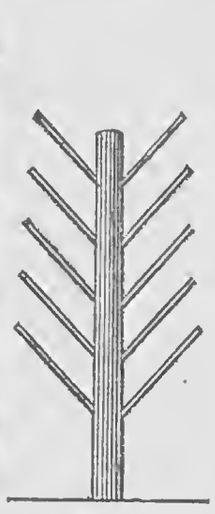

FIG. 377.

cows only are kept this cannot be avoided. In such cases a convenient arrangement is a milk closet protected by fine wire gauze (shown at fig. 376), or inclosed with glass. The latter method will permit the use of ice, by making an ice chest of the upper part and putting the top on hinges for a cover. The interior arrangement of the closet is shown at fig. 378 The shelves are fixed to a movable, upright shaft, so that they may be turned around to bring any pan that may be required to the front. An arrangement of shelves for a larger dairy, to be put up in a cellar, is shown at fig. 379

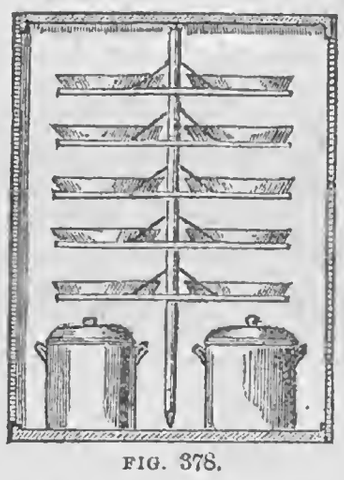

FIG. 378.

This consists of a strong post set on a pivot at the bottom, upon which it turns, and having the top fitted in an opening in the ceiling in which it may be moved around when desired. The advantage of this arrangement is, that a table or bench upon which the milk may be strained into the pans may be placed near the shelves and the shelves moved around so as to avoid the labor of carrying the pans of milk

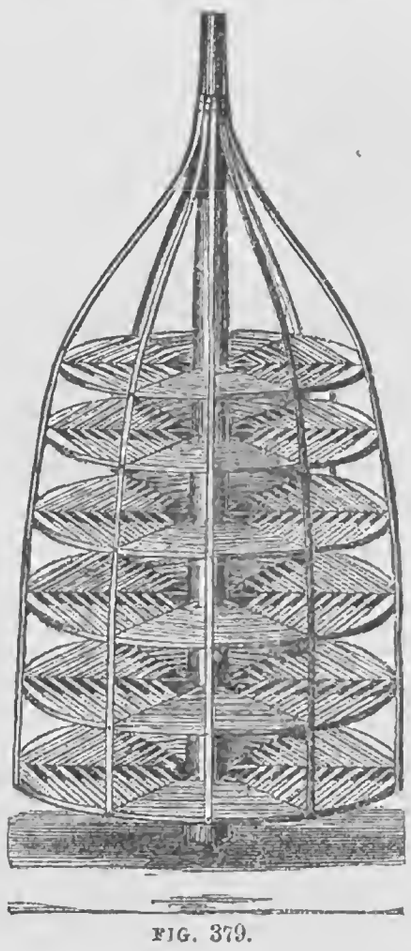

FIG. 379.

from place to place. So in skimming, the pans of milk are brought around to the table or bench and hundreds of steps are saved to the dairy-woman or man who does the work. Many modifications of these arrangements may be made so as to suit varied circumstances, the principle of their construction remaining the same.

A very useful refrigerating closet which may be kept anywhere in a kitchen, cellar, dairy-house or even in a barn is shown at fig. 380. This is made on the principle of an ordinary refrigerator, having thick, non-conducting walls and a door lined with zinc. The lower space is intended for the milk pails and above these is an ice chamber, with a shelf made of slats or bars. The pails are covered and the dripping water from the melting ice falls upon the pails and helps to cool the milk within them. The water is conducted away by means of a pipe, but it may be permitted to remain in the bottom to excreise its full cooling effect upon the milk, before it is drawn off. This closet was designed by Mr. L. S. Hardin whose name is familiar as a freqnent contributor to the RURAL NEW-YORKER, and it possesses many conveniences and advantages for both small and large dairies.

Milk Pans.

The tin pans in common use for setting milk have one objectionable feature; this is, the seam around the bottom in which sour milk *will* be concealed, unless great circumspection is used. The pressed pan, of which fig. 381 gives a section, has no such hiding place for the sour milk, which acts upon the fresh milk in the same manner as rennet, and will often curdle it in a few hours and before the cream has been able to rise to the surface. The pressed pans are therefore much easier to clean and much safer in use. It is also an improvement on the pans to have supports on the bottom at

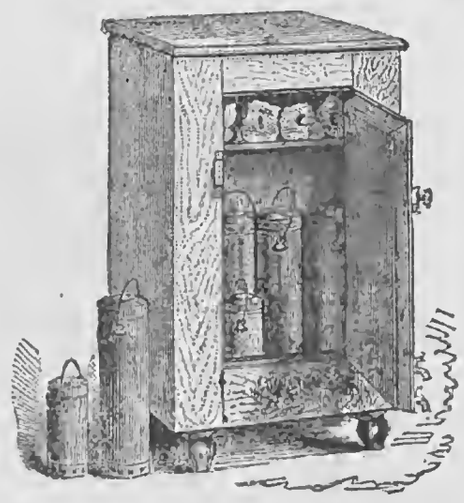

FIG. 380.

least half an inch thick to raise the bottom of the pan from the shelf. This permits the air to circulate under the pan and cools the milk more quickly than if it rested closely upon a solid shelf. The slatted shelves are intended to assist in this more rapid cooling. The deep pails which are preferred by so many dairymen, are about 20 inches deep and from eight to nine inches in diameter. A rim encircles the bottom, which raises it about an inch and which is perforated with several holes to admit air to circulate under the bottom. The shape of these pans is shown above, with the Hardin refrigerating closet, in which they are

FIG. 381.

used. These pails may be used either in dry, ice or cold water setting, but cannot be used except with ice or cold water, the effect of which secures the low temperature by which only the cream can be raised rapidly enough through so great a depth of milk to prevent loss by premature souring.

Washing Pans.

The furniture of a dairy is not complete without arrangements for washing, drying and airing the pans. A sink in the dairy room or the kitchen, with a small pump attached to it and connected with a well or cistern, will be necessary to save trouble and secure effectiveness. In dairying, as in business, it is the economy of labor upon which the profitable results depend next after feeding and managing the cows; and in many cases a well managed herd of cows has been rendered less profitable than it might have been, by poor arrangements in the dairy. In family dairies every housekeeper will as easily recognize the utility of the best method of cleansing the apparatus and arranging the furniture in a systematic way, as a business dairyman whose living depends upon his success. Nevertheless, I have been in dairies and creameries where the system in operation was totally devoid of the commonest means of insuring the necessary cleanliness; and in seeing this the natural consequence—a poor quality of product which unfortunately is the rule rather than the exception—is by no means surprising. Above the sink there may be a rack in which shallow pans may be kept upon their sides; or lath shelves upon which deep pails may be placed bottom upwards. An out-door rack placed in a sunny exposure will be found very convenient. For shallow pans this may be provided on the porch of the milk house, or of the kitchen; for deep pans a post set in the ground near the dairy, and furnished with a number of pins, as shown at fig. 377 will serve as a rack for airing them.

A NEW CREAMING TANK.

T. H. HOSKINS, M.D.

THE Douglas family of Vermont, though it has furnished one eminent public man to the country, is essentially a family of farmers, and they are men who do credit to the profession of agriculture. Francis D. Douglas of Whiting, while a member of our State Board of Agriculture, did much to popularize the deep setting of milk for cream. His open creaming tanks, which he constructed and began to use some ten years ago, and still uses without further modification, were fully described by him before large audiences in all our chief dairy towns, as well as in New York, Massachusetts and Connecticut, where he was invited to address agricultural meetings. These addresses of Mr. Douglas and his high reputation as an extensive and very successful butter dairyman did much to familiarize the minds of our farmers with the practice of deep setting, and prepared them to accept easily the connected principle of cold setting which has revolutionized dairy practice throughout the country. Mr. Douglas is so well pleased with the results of deep setting in tanks where the water is not reduced in temperature below 50 degrees, that he has seen no reason for using a lower temperature. His milk sours before skimming, and is fed to calves and swine. His butter, mostly from Jersey grades, is of the first quality, and is all sold at a fancy price to private customers. He milks between 40 and 50 cows.

E. B. Douglas, of Shoreham, a brother of the gentleman above referred to, has considerably modified the tanks devised by the latter, and has adapted them to cold setting. Mr. D., in a recent tour of agricultural observation through the State, stopped a couple of days with the writer, who was so interested in an account of his improvements, that he exacted from him the promise of a description of them for publication in the RURAL. This has been received, and is as follows:—

"We have a tank two feet deep, six feet long and 27 inches wide, made of two thicknesses of boards, with a thin air-space between. This tank is lined with galvanized iron. Two covers are used to save ice in hot weather. This is sufficient for 35 cows. The milk is strained into pails 20 inches deep and eight inches in diameter, with a narrow hoop on the bottom pierced for the circulation of water beneath the pail. The pails have no covers. They are set, when filled, in the water, which is tempered with ice, and if the temperature is kept below 45 degrees, we are sure to get all the cream in 12 hours. It makes no difference how cold the water is kept if the milk does not freeze. There is more bulk of cream than in warmer setting. It is soured before churning, when it is brought to 60 degrees in Summer and 64 degrees in Winter. A barrel churn is used, and the salting is regulated according to the taste of the customer. No fire is kept in the milk room in Winter, as the heat in the milk keeps the water from freezing. The box being furnished, it can be lined for $10 or $15 by any tin-worker. The pails cost from 60 cents to one dollar each. If you have spring water below 50 degrees, you may use this tank Winters without ice, and let the milk stand 24 or 36 hours without harm before dipping the cream. The method of souring the cream is by warming a sufficient quantity in Winter and mixing it with the whole mass to have it sour the morning before it is to be churned. We have perfect control of the seasons and made 60 pounds of nice butter one day in Midsummer. The cream is perfect for sale or table use."

The above is Mr. Douglas's description of his apparatus, upon which there is no patent, and which he says he would not exchange for any of the more costly apparatus for sale. Any further particulars would no doubt be cheerfully given by Mr. Douglass on application by letter. I hope I may be pardoned for adding (what my own experience suggests) that such letters of inquiry should contain a stamped and addressed return envelop. Signatures are often deficient in legibility.

In the RURAL NEW-YORKER of July 31 I notice that Col. Curtis says: "If writers would quote and readers would understand the statements made in regard to Jersey milk which we made several years since, which Dr. Hoskins in a recent article misquotes, there would be no grounds for so much display of rhetoric." As I never happened to see that article written "several years since," I don't see how I could misquote it. Referring to my file of the RURAL (every reader ought to keep one), I find that in the article of mine to which he adverts (RURAL, May 1, p. 280.) I quoted two lines and a half from Col. Curtis's note in the RURAL, April 3, p. 246, and that I had it *verbatim, literatim et punctuatim*, exactly as there printed. This is, I feel sure, the only extract I ever made from the Colonel's writings. If, however, I have anywhere else misquoted him, and he will tell me how, I will apologize handsomely. I regard *purposed* misquotation as an inexcusable offense, but I do not imagine

that Col. C. means to charge me with that. I hope he will now admit that I was not even careless. Regarding the question of the wholesomeness of Jersey milk, it seems that between him and me there is no difference. But I think he is mistaken in thinking there is none between us and Dr. Sturtevant. If what the Doctor has meant is only that Jersey milk needs more watering than Ayrshire when fed to babies, he has said it in a very obscure way.

The Swine-Herd.

ECONOMY IN FEEDING PIGS.

COL. F. D. CURTIS.

ECONOMY in feeding is necessary if there is to be any profit in the making of pork. More flesh and fat can be extracted from food of any kind when it is cooked. Some things are comparatively valueless when fed in a raw state, but when cooked are excellent food and decidedly fattening in character. The most remarkable of this class of food are potatoes, which require to be cooked in order to be digestible. When cooked the starch in them, the fattening portion — is readily assimilated in the stomach; but when fed raw, it is otherwise. Raw potatoes are therefore among the poorest kinds of feed for swine; but when cooked they are among the very best. The nutritive value of corn is also nearly doubled by being thoroughly cooked. When fed raw a considerable portion passes through the stomach, especially if it is dry and hard, without the least chemical change and quite a percentage is not digested. Where corn is very cheap and fuel and labor dear, it will pay best to feed raw, but where the relation is otherwise and corn is high in price and fuel and labor cheap, it will always pay best to cook it. Whether this important article of food should be fed raw or cooked depends therefore upon circumstances which must govern every farmer, rather than upon any arbitrary rules.

Next to cooking, grinding is the most important condition in the preparation of grain of any kind. All ground food is better fitted for digestion in the stomach and assimilation, especially if it is fed whole. No animal when hungry will feed slowly enough to properly masticate grain, but it will rather hasten to fill the stomach as rapidly as possible. Such a mass of unmasticated food will not be fully digested and, of course, will be voided without the animal receiving the full benefit from it. It serves to stop hunger, but does not make its proper quota of fat. Half the quantity put in a condition to be fully digested, would add more to the growth of the body than the whole quantity. As pigs are usually fed, it may be set down as an assured fact that there is a loss of fully one-half of the food unless we give the credit to the manure, which is an expensive way of adding value to it. However cheap corn may be, this is not a profitable way of feeding, for in such localities manure has a proportionately small value, as it is not needed. The miller's toll—one-tenth for grinding—must be taken into account and the expense of taking to and from the mill, in considering the cost, so that the value of ground feed is a relative one, and must also be determined by the circumstances.

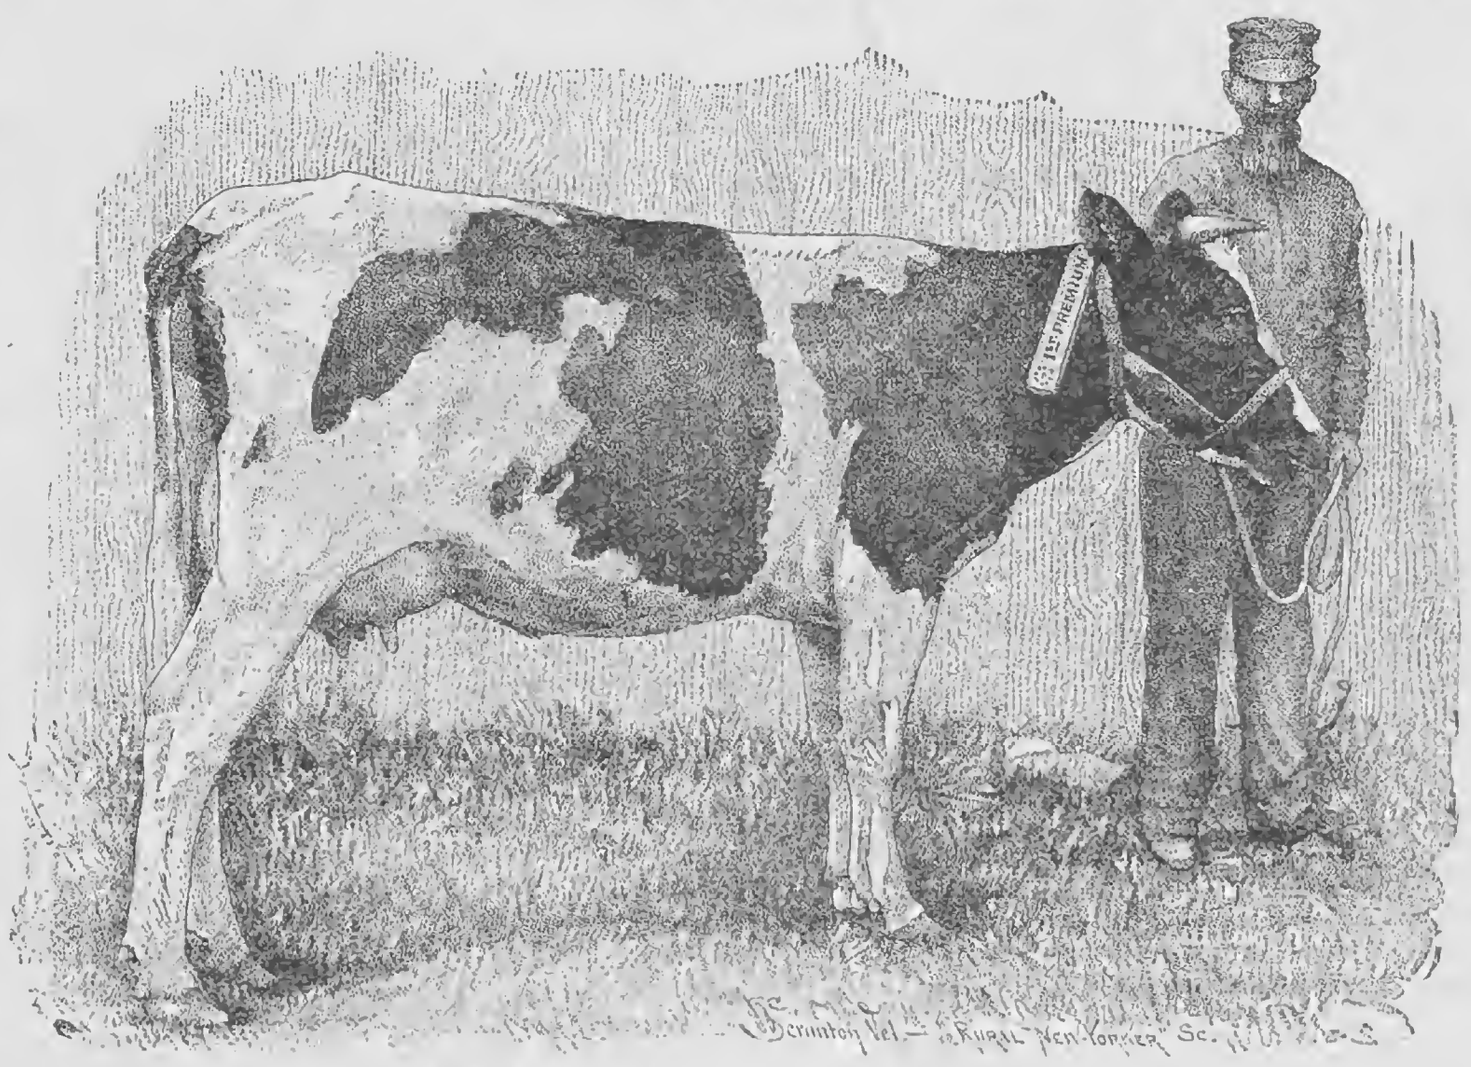
Soaking the grain to a condition of softness so as to make it more readily digestible, will save the miller's toll and make it more profitable in some cases than to have it ground. When grain is thus prepared pigs will do well on it. In cool weather it may be soaked for 48 hours and should be fully this length of time to put it in the best condition for feeding. In hot weather the time for soaking should be less, or else the grain may become tainted and unpalatable for pigs. The first degree of fermentation, an acid state, is the proper one, the most palatable and healthful for pigs. Beyond that fermentation is not healthful. When food reaches a vinous condition—that of vinegar—it is not fit for pigs or any other animals to eat.

The preparation of food, therefore, requires careful attention that it may be properly and profitably utilized. Most vegetables may be rendered more valuable by cooking, and when this is done, they should be mixed with bran or meal to absorb the juices, otherwise there will be too much liquid and this form of food will be found to be washy and weakening. Too much liquid in the food of pigs acts as a diuretic and is too stimulating for the kidneys and urinary organs. The bran or meal should be mixed with vegetables and cooked with them to absorb the natural excess of water. When this is done there will not be such a volume of liquid taken into the stomach, but the food will be more concentrated and healthful.

Vegetables—beets, mangels or pumpkins—may be fed raw in connection with grain and they will be found to aid in digestion and at the same time they will keep animals in a healthy condition. When fed in this manner, they tend to increase the appetite and to prevent fever which is the natural result of feeding grain alone. They are cooling and laxative in their nature and therefore serve as antidotes to the heating and costive effects of grain. Sloppy food of all kinds makes soft and flabby meat, while dry food tends to make it firm and solid. A judicious mingling of the two kinds of feed always makes better meat by making it firm enough and at the same time keeping it free from any feverish tendencies. Such meat will also possess a good flavor because the conditions under which it is made are healthful.

When pigs are fed corn on the ear they do not eat it so ravenously as if shelled for them, and they masticate it better. More hogs are fattened in this manner than in any other; but we believe that it would be more economical to grind the ears, cob and all, and feed it in this form. There is fully five per cent. of nutriment in the cob, as has been tested by repeated experiments, besides its containing chemical properties conducive to health, and it also tends to promote a distension in the bowels and action similar to that of raw vegetables. Every farmer, if he wishes to feed his pigs for any length of time, should unite the cob with the corn to keep them in good health. If fed in this manner they would not be liable to founder, the effect of the feverish condition. When cob is united with corn in the stomach the food is not so compact in the stomach and is more readily penetrated by the gastric juices, hence digestion can be more rapid and complete.

Shelled corn should be scattered thinly on the ground so that it may be picked up slowly, which will cause the pig to more thoroughly chew it. If thrown in a mass pigs will swallow it whole, when it will not be digested as the gastric juice will not penetrate the unbroken shell of the kernel. Such feeding is exceedingly wasteful.



NANNIE SMIT.—TWO YEARS OLD.—FROM LIFE.—FIG. 382.

The Poultry Yard.

RAISING ARTIFICIALLY - HATCHED CHICKENS.

L. S. HARDIN.

IT is evident to the most casual observer that chickens hatched without a mother must be raised without a mother. Born orphans, they must remain orphans. When my incubator produced the first chick, what a commotion there was in the house. The birth of a baby wouldn't have been a circumstance to it, and while the women folks would have known what to do with a new baby, we all looked at one another with blank bewilderment when the question was asked what we should do with the new chick. The thermometer outside was down nearly to the freezing point, while in the incubator the temperature was 105 degrees. The little chick's hair stood on end and he was panting for dear life. He must come out of there, and as his brothers and sisters were following him out of the shells, we began to prepare all sorts of receptacles for them. We rigged up a mother on the heater and put in it several chicks that lived a few hours and then died. We decided it was too cold, so we put others in a box and put them back in the incubator, where some of them were smothered with the heat. It was evident something must be done or we would soon have no chicks to experiment with. I determined in my own mind that a temperature of about 90 degrees would be correct, so I rigged up the brooder and started the lamp, put in the thermometer, and when the proper degree of heat was reached put what was left of the young chicks into the brooder and they began to brighten up. The problem was solved, though its solution cost me the lives of many fine chicks.

With further experience I find the following treatment a complete success: After the chick breaks the shell let him scramble around and dry himself in the incubator, which will generally take a few hours, though some are much stronger than others. After too much exercise they begin to pant, and should, of course, be removed. I have a box 12 inches square and six inches high. To the lid of this tack strips of woolen cloth an inch wide and two inches apart. These rags should hang within two inches of the bottom. Put a half inch of dry sand in the box. The brooder is kept at a temperature between 80 and 90 degrees. The young chicks, when perfectly dry, are taken from the oven and put in the box and the box put in the brooder where the other chicks are. Air-holes should be cut in the *lid* of the box, for if cut in the side the other chicks peck out the feathers of the little ones through these holes. This box keeps the chicks warm and they soon brighten up, and at the end of 12 hours are ready to take the first lesson in eating. Take a hard-boiled egg and chop the white and yelk up together as fine as grains of wheat; with it cover the bottom of a little pan—the top of a blacking box will do. Place this in the box with the chicks and while tapping with the finger in the feed, repeat "tuck, tuck," like the clucking of a hen—fig. 383. A little patience and one chick will see something and peck at it, when the others will follow suit, and in a few minutes the first lesson is learned. After a few meals, with this process repeated, it will be only necessary to rap on the box and the little fellows will be ready for their meal, and also be spry enough to be put out of the box and run with the others in the brooder.

FIG. 383

The next lot of chicks I feed as follows: Stale wheat bread is soaked in water. A cupful of oat-meal or rice has boiling water poured over it and is stirred until it takes up all the water. I mix two handfuls of soaked bread, with the water squeezed out, with one handful of this oat-meal, and dry it all with unbolted corn meal until it crumbles freely. A little salt is mixed with it. This, with a little meat once a day, is their sole feed, and it is given about every three hours until the chicks are a week old, or until the wings are large enough to cover their backs, when they are put in a pen. This third lot is fed the above mixture five or six times with meat or worms once a day, and a head of cabbage is hung in the pen for them to peck at. The bottom of this pen is covered with dry sand and ashes with a pile of old mortar and broken oyster shells to be picked over.

For a water fountain I use a small tin pan, covering with a stone all the top except just enough to allow the chicks to drink, as shown at fig 384. Turn the open part next to the wall so the little things cannot scratch dirt into it. Chicks are very fond of scratching the feed out of the pan. To prevent this I take a sheet of tin —fig. 385—bend it over and put the feed under the bent part. This prevents their treading on or scratching out the feed and caters to their natural taste for hunting under things for food. It is also cleaned more readily than a pan.

The body of the brooder—fig. 386—is made of zinc with an air chamber over and under the back end. The lamp setting under it sends the heat up through the heater and out through the top where a nursery for young or sick chicks is placed to utilize the waste heat. This form of brooder, with a warm chamber and the chicks feeding in the open air, I believe to be better than those where the chicks are never subjected to a cool atmosphere. The short stay while they feed in the open air tends to harden and invigorate them. All brooders, boxes or pens, used to keep large numbers of chicks in, should have the bottom lined with zinc, as wood or earth is sure in time to become saturated with excrement, no matter how clean you try to keep it, and it is the ammonia arising from these tainted floors that causes such pens in time to prove fatal to the chicks.

I promised to tell the truth about my experience in hatching the eggs, and here it is: The last eggs that hatched out were bought Oct., 10. Up to that time I had purchased 105 eggs at 30 cents a dozen. About one-third of these proved unfertile and were cooked and eaten or hard-boiled and fed to the young chicks, leaving about 75 eggs for the incubator to work on. Out of these I now have 27 as fine chicks as I ever saw. By my own awkwardness and want of experience I have killed or

FIG. 384.

lost fully one dozen. My machine was an old one and the battery was worn out. The gnage never was worth a cent. All defective parts have been renewed except the guage and I have learned to doctor that. Owing to the above faults the temperature in the oven has run too low for days at a time, and for hours it has been at 82 degrees, while it has taken short trips as high as 110 degrees. The only wonder is that I got a chicken out of any of the eggs. It is astonishing how much an egg will stand.

From my experience with hens I am satisfied I will be able to get more chicks from a given number of eggs with the incubator than

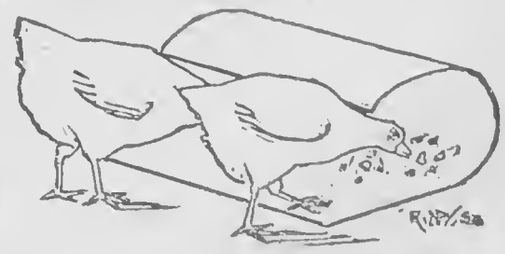


FIG. 385.

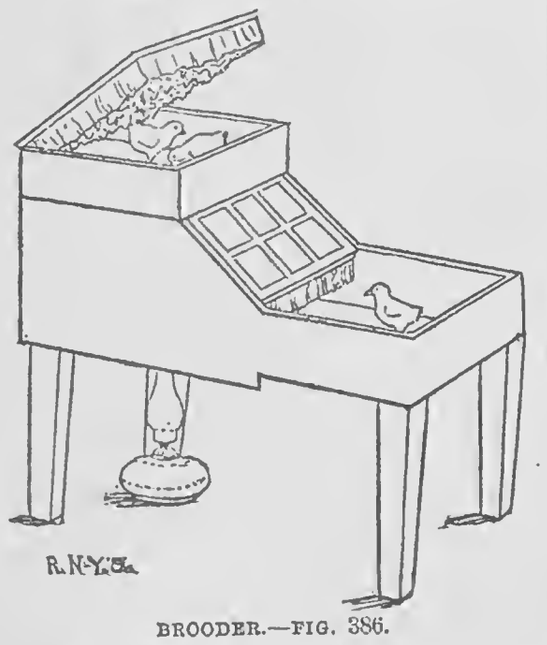
I ever could with hens. It would be a poor hand who could not raise from a fourth to a third more chicks with brooders than with the best hens.

LIME FOR LAYING HENS.

THE shell of a hen's egg is composed of almost pure lime which she is obliged to fur-

nish from her food. Eating pure lime will not always accomplish this. Each article she feeds upon, whether flesh or vegetable, has in its ingredients a certain amount of the carbonate of lime, and in the wild, natural state with but few eggs to lay in a season, it was easy for the hen to store in her body all of this material necessary to meet her requirements; but in the present artificial state, with a large quantity of eggs to lay in a year, she needs some artificial aid in order to supply this extraordinary demand for shell material.



BROODER.—FIG. 386.

When hens have not a wide range they should be supplied with lime in some form. The best mode in which this can be supplied is in the shape of old mortar or plaster crumbled, or of oyster shells broken fine with a hammer. Some writers advise burning the shells first to make them brittle and easily broken, but this will be found only an extra trouble by the close observer, as a hen will require several times the amount of burnt shells that she will of fresh ones. The best way to break them is to have a keg with both heads out; place it over a flat stone; lay the shells on the stone and either drop a heavy stone on them, or make a pounder with a handle to it like those with which paving stones are beaten down in streets. The keg prevents the pieces of shell from flying away and being lost. A hen eats these pieces with great avidity, which is a very good proof that they are useful to her. If pure lime is fed it should be first air-slaked to prevent it from being too strong and dangerous to the bird. Burnt or broken bones answer quite as well as lime or shells.

Farm Economy.

PRESERVATION OF APPLES.

PROFESSOR F. H. STORER.

A SET of experiments made recently in Germany, by Sorauer, are interesting as bearing upon the question, brought forward on page 731 of the RURAL, whether Winter apples can best be kept in a dry or a damp cellar. The results of these trials clearly corroborate the conclusions set forth by Dr. Hoskins in your issue of November 6th. Sorauer premises that while there is no longer any doubt in men's minds that light and warmth had better be excluded in order that apples may be kept fresh and be hindered from becoming over-ripe, there is still a wide diversity of opinion as to whether damp or dry air is most favorable for the preservation of the fruit. To test the question, he experimented upon several kinds of apples, particularly the "Winter Golden Pearmain." Three separate lots of the apples having been weighed out, one lot was spread on shelves in an ordinary fruit cellar, another lot was kept in air from which moisture had been pretty thoroughly removed by means of chemicals, and the third lot in air that was completely saturated with moisture. On re-weighing the several lots after the lapse of some time, it was found that the apples kept in the air of the cellar had lost three and a half per cent. of their weight; those kept in dry air almost eight per cent.; while those kept in air saturated with moisture had lost but little more than one-half per cent. It could not be perceived that any advantage was gained by using the dry air. On the contrary, the apples kept in the dry air shriveled more than the others, and manifestly ripened more rapidly, so that in the later months of the experiment they were less sweet than the others, and a larger proportion of them decayed. Not a few of them became rotten-ripe, and this in spite of the fact that, as was naturally to be expected, rather less moldiness appeared, as time went on, upon the fruit kept in the dry air than upon that in the air which was saturated with moisture. The importance of hindering the fruit from coming too quickly to full maturity was further illustrated in these experiments by the fact that the first apples to decay were those which were ripest, that is to say, most mature, at the beginning of the experiments.

It was found to be true of apples kept upon shelves in the cellar that they gave off more water by evaporation in a given time when they were green than they did afterwards, as they became riper. It appeared also, rather remarkably, in a trial between apples whose stems had been broken off and those whose stems had been left uninjured, that the latter lost rather more by evaporation than the former; the inference being that there is no harm in breaking the stalks of apples in the process of gathering.

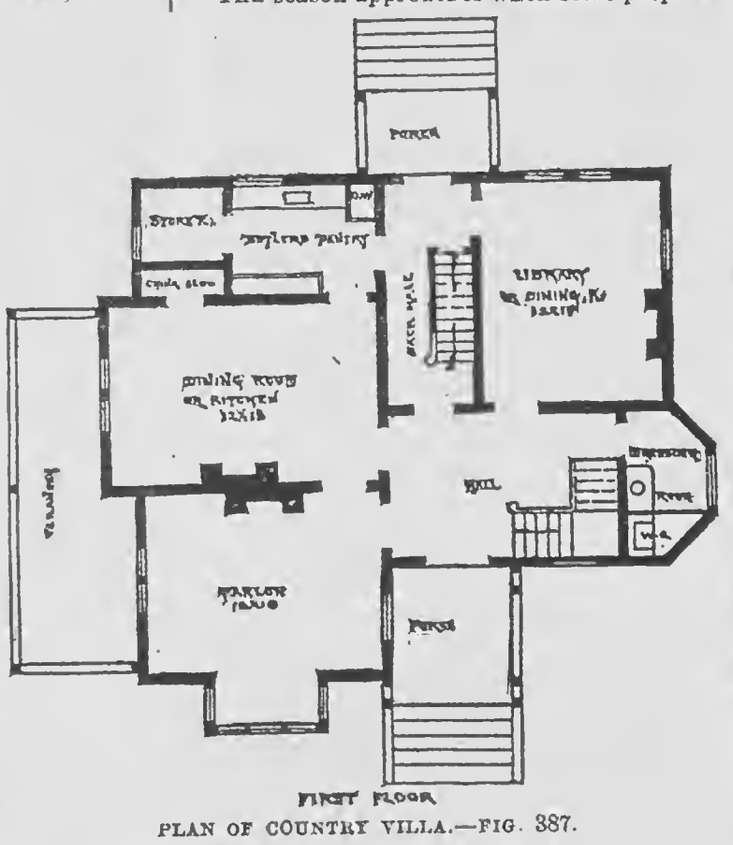
Other experiments were made to determine how much influence the natural varnish on the skin of apples has upon their preservation. To this end, the waxy covering was removed from a number of apples by gently rubbing them with a mixture of alcohol and ether, then washing them with very dilute potash lye and finally with much water. It was found that apples thus treated lost five per cent. more of their weight, by evaporation, in a given time than apples which had been left in their natural condition and similarly stored. As regards this point, Sorauer is in full accord with the popular conviction that the unhurt skin of an apple is to be regarded as the chief protection against decay. He found that apples whose waxy coating had been left unharmed did not decay for a long time after he had smeared them with mold, although they were left all the while in a moist and warm place.

Still other experiments were made to test the question whether there is any advantage in packing apples, layer by layer, with straw or sand. Four kinds of apples were packed away in glass vessels, half of each lot in chopped straw and the other half in dry sand. It appeared not only that the sand was decidedly preferable to the straw, but that the use of straw is not to be commended. Although there was no loss through decay of the apples packed in the straw, they nevertheless shriveled more than apples which were lying free in the cellar, and they acquired a musty taste from the straw as it became damp. The use of dry sand, on the other hand, seemed to be advantageous, since the fruit packed in it retained an uncommonly fresh appearance and excellent flavor, and promised to keep, in good part, until July. The sand-packed apples lost only about half as much water by evaporation as those which were lying free upon the shelves; they were almost wholly free from moldiness, and when one of them happened to decay it did not infect the others. Even those apples which had been bruised did not decay any more rapidly than the sound fruit, provided that the skin had not been broken. Other apples were wrapped in tissue paper and compared with those left uncovered, both in a dry chamber and in the cellar. No advantage was derived from the paper excepting in the dry room, for in the cellar mold developed itself more rapidly upon the apples wrapped in paper than on those which were lying free.

It seems plain that the main points to be considered in storing apples are, to keep the temperature of the room so low that the fungi which cause decay cannot flourish, and to have the air of the room moist enough to hinder the fruit from shriveling. If the storehouse were warm, moisture would doubtless be injurious, since the conditions would be favorable for the propagation of the hurtful fungi; but if the room be cold enough to hold the fungi in check, moisture will do good rather than harm.

ICE HOUSES.

THE season approaches when some preparation for storing a sufficient quantity of ice for the family use during hot weather may be considered. The appearance of an article upon the subject of ice houses in connection with dairying in the last issue, affords an opportunity for suggesting the preparation of a house and the storing of at least a small quantity of ice. As will be seen by reference to Mr. Stewart's article upon the Dairy Cow, there is no very elaborate or expensive outlay necessary. The only requirements are that there should be perfect drainage and ventilation, and that the walls be rendered non-conducting by the use of leaves, straw, charcoal, saw-dust, tan-bark, or other substance, and that the ice be closely and compactly put in with some non-conducting material around the layers and upon the top. There is, perhaps, little need of anything between the layers, provided the ice be closely packed, for if a stream of water could be so conducted as to trickle upon it and freeze the mass into one solid body, it would be as well. In many instances a mass of ice is piled up squarely over an excavation or upon a platform upon the top of the ground, raised so as to insure drainage, and the house afterwards built around it. When once the effort is made and the pleasure of a glass of ice water and other uses of ice are once experienced during warm weather, the family will not afterwards willingly be without the cheap luxury.



PLAN OF COUNTRY VILLA.—FIG. 387.

BOOK FARMING.

WE came here about two years ago from Ohio, to see if the climate would give me any relief from asthma. I had been afflicted for several years and have been improving since I came here until now I am almost cured. I bought a poor, worn-out farm of 150 acres, half cleared, the rest oak and pine timber. I knew nothing about farming, practically, being a carriage-maker by trade. I owned about an acre of land in Ohio, and took great delight in working in the garden. I loved it, and intended as soon as I could to be a farmer. I have taken agricultural papers and periodicals for the last 20 years, and tried to learn the true theory of successful farming. There is no paper I have ever seen that suits me as well as the RURAL, and I could not do without it for three times its cost. When I came here I had just $11 in cash after paying my freight bill on the railroad, but I was out of debt and owned my farm and a team of horses. To recount how I have succeeded would be a long story, and I would like the thousands of poor mechanics in the North to know it, as I am sure a great many of them could do likewise and better their condition greatly. Suffice it to say, I and my family have improved in health; we have not run into debt; we have now four cows, eight hogs, 12 sheep, two horses and feed for our stock and ourselves through the Winter. We are happy and owe our prospering chiefly to the agricultural papers of the country, the first and best of which is the RURAL NEW-YORKER. Long may it flourish! The farmers in this section have just done sowing their wheat. There has been a large acreage sown. The tobacco crop was a failure here this year, owing to the fly and the drought. The corn crop is excellent—the best in 10 years. Wheat is about half a crop. Oats, Winter, tolerable; Spring, a failure, some not being worth cutting. Potatoes and garden truck generally were very poor owing to the dry Spring. Should you wish it will write you again. G. L. A.

Chase City, Mecklenburg Co., Va.

[Yes, we wish it. Such experiences as yours are just what we do wish most of all. What you have done—others may do. Tell them. Eds.]

Rural Architecture.

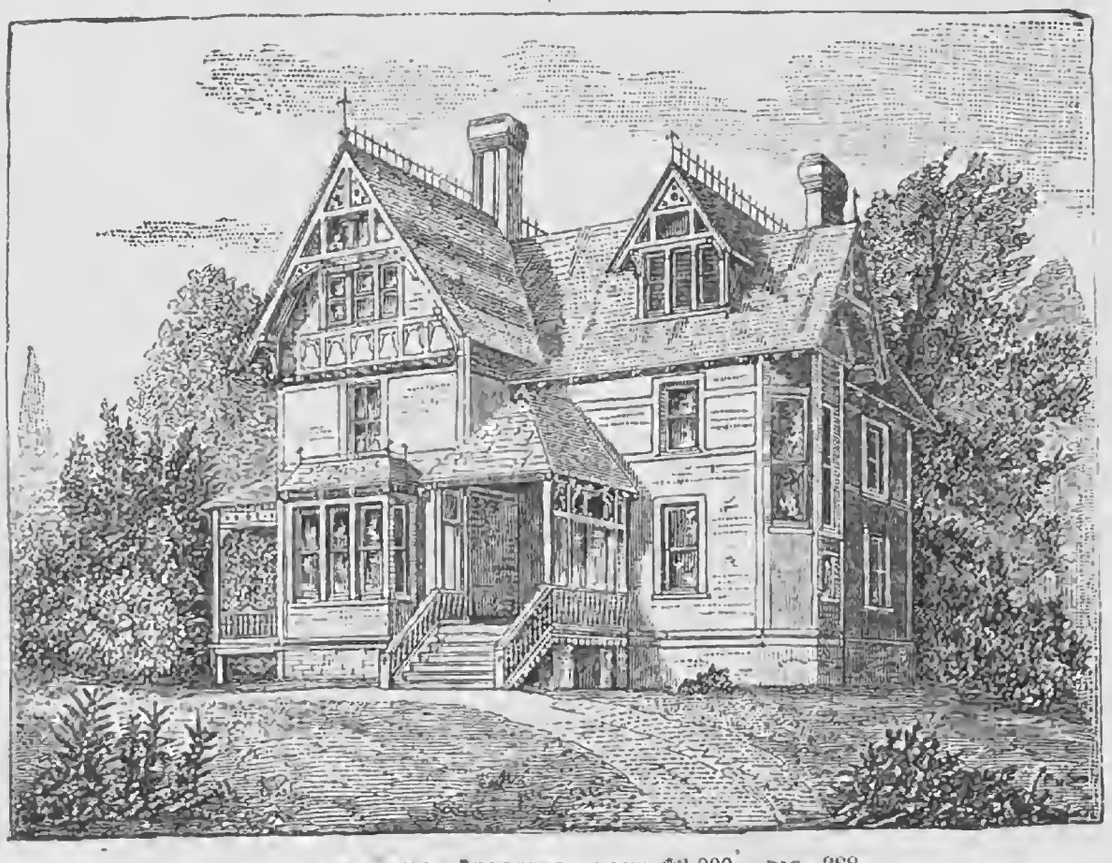
DESIGN FOR COUNTRY VILLA.

WE give herewith a very neat and complete design for a first-class country villa, which, constructed of wood, comes within the reach of those possessing neatly laid out grounds and desiring a moderate-sized and moderately expensive dwelling.

As will be seen by reference to the plan of first floor, the shape has been selected for the purpose of utilizing space without constructing a large frame, and is therefore in part oval or circular rather than entirely square, affording a more picturesque appearance in keeping with rural scenery, and adapted to the presence of foliage and drives as found at country seats and country places.

At the same time the good arrangement of the rooms and their individual comfort and convenience are greatly promoted, while to the appearance of the whole there is given such character and picturesqueness as will add greatly to the value and attractiveness of the property. A special and somewhat new feature is the location of a conservatory in front of its first landing of stairway in octogon end at the right and dressing-room below. The library is in the rear of main hall, and at the right of back hall, which includes the back stairway. The parlor occupies the front of the house at left hall, with dining-room, butler's pantry, store room, china closet and dumb-waiter in the rear. The plan is arranged for kitchen in the basement, although it can easily be included on principal floor, if desired. The second floor contains three bedrooms, bath-room and five closets. Two or three rooms may also be included in the attic plan.

The cost of the villa, according to the estimate of Messrs. Bicknell & Comstock, architects, No. 194 Broadway, N. Y., who furnish us the illustrations, is about $3,000



A COUNTRY VILLA, COSTING ABOUT $3,000.—FIG. 388.

Miscellaneous

CATALOGUES, ETC., RECEIVED.

HISTORY OF THE MASSACHUSETTS HORTICULTURAL SOCIETY FROM 1829 TO 1878.—This octavo volume of 575 pages is, both in matter and treatment, a model for future works of the kind. The collection and orderly arrangement of the great mass of antiquarian and other information contained within its covers, display a praiseworthy degree of painstaking ability. Its typographical execution, too, is not unworthy of the excellence of its contents. The paper is good, the type large, clear and restful to eyes wearied with the smaller print of ordinary books and newspapers. It is a work which should find a prominent place in the library of every lover of horticulture, not only in the State with whose horticultural progress it mainly deals, but all over the country, for although the Horticultural Societies of New York and Pennsylvania were established before that of Massachusetts, yet the latter has done more for the horticulture of the entire country than any similar association in the land, and the history of its career during the first half century of its labors embraces a large variety of topics of nearly as much interest to horticulturists everywhere as to those of the old Bay State.

More interesting to the general reader than even the history of the Society is an introduc-

tion of 54 pages, giving a pithy sketch of horticulture on this side of the Atlantic down to the year 1829 when the Society was established. The first settlers, it seems, found that the Indians already used fish manure for corn, selected the finest ears for seed, possessed varieties specially adapted to cold and warm climates, and were in the habit of planting their corn "when the leaves of the White Oak were as large as a mouse's ears." In 1629 we learn that "thirtie, fortie, fiftie, sixtie-fold were ordinarie" yields of corn in Plymouth Colony. In 1631 we are told the Pilgrims planted 20 acres of Indian corn and six of barley and peas, while grapes, white and red, very sweet and strong; strawberries, gooseberries, raspberries; plums, white, red and black; and roses of the same colors, "single, but very sweet indeed," were all abundant. Of Peregrine White's apple orchard planted at Marshfield in 1648, a venerable tree survived until it was cut down a few years ago, when the land passed away from the old settler's descendants; while a pear tree, imported by Gov. Prince from England about 1640, and planted at his homestead near Cape Cod, bore 15 bushels of fruit a year as late as 1836, and though the larger of the two stems that formed the tree was blown down in 1857, the remaining stem is now five feet around the butt and 35 feet high; while another pear tree planted by Anthony Thatcher in 1840, bore fruit in 1872. The Rhode Island Greening apple seems to be the oldest of our present favorites, having been introduced away back about 1765. But want of space prevents further reference to the interesting reminiscences with which the 54 pages of the "Introduction," are richly packed.

The first step towards the present work was taken in 1854, when, on motion of Mr. C. M. Hovey, it was voted by the Society that the Committee on Publication should consider the propriety of publishing such a history. No action, however, was taken until 1861, when a committee of six, consisting of President Joseph Breck, Edward S. Rand, Marshall P. Wilder, Charles M. Hovey, Joseph S. Cabot and Eben Wright, was appointed to collect and publish a complete record of the proceedings of the Society from 1829 to 1862, inclusive. Rev. Luther Farnham was appointed editor, and prepared the history to the close of the year 1852. In 1862, President Breck, in his valedictory, stated that the work would require revision, but nothing was done until 1871, when the subject was placed in the hands of another committee, embracing M. P. Wilder and C. M. Hovey, of the former committee, and these appointed Mr. Robert Manning, the present Secretary of the Society, to revise and complete the work.

Under his able editorship the history has been brought down so as to include the first half century of the Society, and his laborious research, strict accuracy and great application have produced a work which for its lucidity, fullness and finish reflects no small honor upon him. The appendix, besides a good deal of other information, contains a full list of all the officers and members of the Society since its foundation, among which occur some of the best-known names in American horticulture.

In concluding this brief notice we once more strongly recommend all lovers of horticulture to secure a copy of this truly excellent work, and to do so at once, as we learn the supply is limited. The work can be had from Mr. Robert Manning, Secretary Massachusetts Horticultural Society, Boston, at the moderate price of $3.

MICHIGAN HORTICULTURAL SOCIETY.—The tenth annual meeting of the Michigan State Horticultural Society will be held in Ann Arbor, on Monday, Tuesday and Wednesday, Dec. 6, 7, 8, in acceptance of an invitation from the Washtenaw County Pomological Society. Ample arrangements will be made by the local society for the reception and entertainment of members of the State society and delegates from branch societies. Others will find good hotel accommodations at reduced rates. A cordial invitation is extended to all interested in horticulture to be present at the sessions and join in the discussions upon the various topics presented.

T. T. LYON, President.
CHAS. W. GARFIELD, Secretary.

HOW TO AVOID THE DOG DISTEMPER.

I HAVE raised many a puppy to doghood, and of several different breeds, and never had a case of dog distemper. The way I avoided this was, not to feed the pups any meat till they were about nine months old, and then sparingly till they were a year old. The best food I have found for puppies is a mixture of Indian and oat-meal, half and half, or wheat grits or Graham meal. With either of the above, half and half, and made into bread, or boiled into mush, the dogs have thriven well. With this, when they would eat it, I have given some boiled potatoes, turnips or carrots. Now and then a puppy will also take cabbage as a part of his vegetable food. Soup made from boiled bones is a good thing to mix with the bread or mush, or a little pot grease may be added to it for a better relish. Give a tender bone now and then for the puppy to gnaw.

Puppies and dogs may be fed all the skimmed milk they will drink. This should be given warm, and then it is not apt to scour them. If they get too loose at any time, give a little astringent medicine, or change their food. Fine wheat flour boiled to a thickish mush in milk, is an excellent thing for a change of food, and to stop looseness. Perhaps rye flour might do as well as wheat, but I did not happen to have it on hand to try it when my dogs were affected with scouring, which was never serious with them.

Kittens may be raised pretty much in the same way, and thus kept from disease. But they can have a little fish now and then. This I don't like to feed to dogs for fear of their getting choked with bones. Both should have free runs in the open air, and where they can get at grass during the mild season. This is healthful for them, and they like to eat a little every day. Cat-mint is also excellent to keep cats and kittens in good order, and if they can get it either green in Summer or dried in Winter, they will nibble just what is wanted and no more. B. A.

RURAL BRIEFLETS.

LET us repeat—The Niagara is not yet for sale. . . . . .

OUR remark respecting this much-talked-of grape that, in quality, it was "no better than the Concord" has brought out several protests. Here is one from our respected contemporary The Rural Home:

"We have eaten a great many grapes, and, although we make no pretensions to a critical taste, we know when a grape accords with our taste and think we can make comparison between two grapes with which we are familiar. We have long been familiar with Concord and are getting pretty familiar with Niagara, and we have never thought of putting the latter down as low in quality as the former. It is much pleasanter without foxiness, sweeter and richer. It does lack, as we have before said, a certain vinous flavor prevalent in the best foreign varieties, and it is also free from those unpleasant peculiarities of flavor to be met with in most foreign or hybrid varieties. . . .

THE Ohio Farmer proposes for next year not only a new "dress," but to enlarge itself. The Farmer is a good paper and we are glad to see this evidence of its prosperity. . . . . .

THERE is room for the display of a more liberal spirit among the members of the agricultural press towards one another. A few weeks ago we sent the following advertisement to a number of Eastern and New York State Journals for one insertion:

"The Fair Number of the RURAL NEW-YORKER will be issued in September. It will consist of 40 pages with original engravings and articles from our best writers. Our readers are invited to send for copies which will be forwarded without charge."

THE New York State papers, to which it was sent, viz. the Husbandman, (Elmira), Rural Home (Rochester) and The Cultivator and Country Gentleman (Albany) published it promptly. The Eastern papers, with the exception of one, ignored it entirely. That one (the American Cultivator) was polite enough to return our advertisement indorsed "Respectfully declined." . . . . . .

WE would state that the columns of the RURAL NEW-YORKER are open to the announcements of any of its agricultural or horticultural contemporaries. And we should not object to adding the recommendation to our readers that they send for specimen copies of the journals so announced. If by such a course we were to injure the interests of the RURAL NEW-YORKER, we should at least have the satisfaction of knowing that we had placed them as subordinate to the interests of agriculture. . . . . .

IT may be supposed that the province of rural journals is to serve rural people. Is this best effected by seeking to confine them to the reading of one rural journal only? . . . .

THOSE who are inclined to sit in judgment and who delight in drawing odious comparisons might dwell upon the harmony of things as between the much-talked-of, worn-out fields of New England and the tolerant, great-hearted spirit of her Agricultural Press. . . . .

OUR advice to our readers—to all—is to send for as many specimen copies of different farm journals as it is practicable or pleasant for them to examine carefully, and then subscribe for those which seem best suited to their several requirements. . . . . .

IT would seem from Prof. Storer's note on page 769 that his opinion of the U. S. Agricultural Reports formerly and now published, is different. . . . . .

QUASSIA is recommended by a Western peach grower as a remedy against blight and green fly. A weak solution only is advised. . .

SOME people are so gloomily disposed that they are unhappy when the moon is full because they can't see the dark side of it. . . . .

SEVERAL of our readers have complained that these "Briefletts" are *too crowded*. Here is one from our esteemed friend Dr. F. M. Hexamer: "Please do print the Briefletts in separate paragraphs. As it is, the reading of them is hard and a great strain upon weak eyes."—Hence the change. The RURAL is conducted to please its readers and we have only to learn of their wishes to respect them. . . .

DR. HEXAMER at the same time pays us a compliment: "Your grape illustrations," he says, "are splendid." . . . . . .

READ Prof. Storer's article on the Preservation of Apples. . . . . .

WHAT OTHERS SAY.

MR. W. I. CHAMBERLAIN has remarked—in the Cultivator, if we remember rightly—that as a mere child he recited Greek in a preparatory school, to a learned college professor. One day the professor remarked that out of 300 English grammars already published, there was not one really good one, and in the simplicity of Mr. C.'s heart he asked him why he did not write one himself! He was not offended, but immensely amused at his childish innocence, and only said "it is far easier to criticise others' grammars than to make a good one yourself!" Kindly criticism is always welcomed by managers of fairs, and is sometimes useful. But criticism of fairs and of State and county boards often comes from non-exhibitors, and even non-attendants—from those who do not put their own shoulder to the wheel in honest effort to help. Shakespeare makes one of his characters say, in substance, "I could easier teach twenty men what it were well to do, than to be one of the twenty to follow my own teaching."

SMALL POTATOES.—A correspondent of a leading publication writes that he made an experiment the past season which he thinks fully explodes the theory that small seed potatoes will only return a small crop of small potatoes. Any theory of that kind was exploded, the Germantown Telegraph supposes, before that writer was born, and the whole letter is an admirable illustration of a class who are continually fancying they are exploding something when there is really nothing to explode.

Still there is some misapprehension as to this small potato seed business, and it may be worth while to set it right. It is not the size of the potato, but the vigor and strength of the eyes on the potato, that make up the case. These are often as large on a potato of moderate size as on a very large one. If the eyes are of the same strength—of equal vigor—it is the same as if they were all cut from the same tuber. A strong eye starts to grow and almost immediately sends out roots of its own, and has no farther dependence on the old piece. It gets its food wholly from the earth. If it is a weak, puny sprout of course it takes a whole season to get strong, and in the meantime can only send out very weak threads that must be able to form nothing but very small potatoes.

PROFESSOR HILL of England, in a lecture upon the cart horse, observes that the face should have an intelligent and good-tempered expression, and this is usually found in horses with a broad, flat forehead, a straightly-inclined nose, a moderately square muzzle (in brown horses a tanned one is preferred) with some expansion of nostril, full and prominent eyes, and thin lids. A small, sunken eye, particularly with a Roman nose, gives a horse a sulky, piggish expression, and often denotes obstinacy and bad temper. Again, the submaxillary space, or distance between the branches of the lower jaw, should be moderately wide, and not bulging or lumpy towards the chin, otherwise a profile view is considerably depreciated. The ears also, which are indicative of alarm, temper, or play, demand attention. They may be directed forward, or as it is termed, "pricked," from excitement fear, or inquiry, or be laid backward from play or vice, while frequently you may observe one is carried forward, the other backward, especially when going. This is for the purpose of collecting all sounds, and such an animal is usually attentive to all that goes on around him.

PROF. SHELDON writing to the Live Stock Journal of London from Canada says:—"But Canadian cheese has obtained a high reputation, and most deservedly so, in England. It has great body, a good flavor, plenty of quality, and as a rule is well made. I visited several factories in the neighborhood of Ingersoll, and also the Tavistock factory, which belongs to Mr. Ballantine, M.P.P., and is situated a few miles from the city of Stratford-on-Avon. This is one of the most conveniently arranged factories I have seen, and the cheese made in it is excellent. The milk received daily at the time of my visit was about 17,000 pounds, from nearly 1,000 cows. The temperature of the curing room is kept, for Autumn cheese, at 65 deg.; for Summer at 75 deg.; and Spring fodder cheese at 80 deg., there or thereabouts."

AGAIN he says:—"The grand secret of the Cheddar system of cheese-making—which, by the way, is probably the best system the world knows—consists in the ripening which the curd gets after separating it from the whey, and before salting and pressing it. But even in the Cheddar system it is well known that the Autumn cheese does not mature like the Summer's, and this Mr. Ballantine declares is owing to the night's milk of Autumn not ripening like that of Summer. Now, to those who have studied the question of cheese-making in its scientific as well as practical aspects, this argument of Mr. Ballantine appeals at once to the suffrage of one's judgment. He, at all events, is thoroughly convinced of its soundness, and I have had other testimony to the same effect. The expedient is worth trying in England; it is simple enough in all conscience; try it."

MR. C. E. THORNE, of the Ohio State University, makes a very interesting report in the Farmer of wheats which were sent out to a number of persons in various parts of the State. The following is a summary:

COMPARATIVE YIELDS.

Fultz	24 reports;	average 28¾	bu. per acre.
Clawson	10 "	" 28¾	" "
Silver chaff	15 "	" 26¼	" "
Velvet chaff	11 "	" 26	" "
Gold medal	13 "	" 21¾	" "
Sandomirka	7 "	" 24½	" "

Of Clawson, Mr. Thorne speaks as follows: "A further inference which seems fairly deducible from our tables, is that the Clawson is not our most productive wheat. We have noticed on this farm that its straw appeared to be losing its stiffness, while the grain seemed to be improving in quality. This improvement in the grain has not been maintained this season, however, while the buyers of the vicinity have finally executed their threat of lowering the price of Clawson from five to ten cents per bushel below that paid for red wheats. The importance of a very small increase in the productive power or in the market value of a variety of wheat will be realized when it is remembered that the wheat crop of Ohio for 1878 was nearly thirty-five and one-quarter million bushels, from two and one-eighth million acres of land, an average of sixteen and one-half bushels per acre. An increase in productiveness of one-half bushel per acre would add more than 1,000,000 bushels to the total crop, while an advance of five cents per bushel in the market value of the whole would amount to a total of a million and three-quarters of dollars.

TASTELESS COD-LIVER OIL.—Dr. Peuteves, in La France Medicale, recommends, in order to render cod-liver oil tasteless, to mix a tablespoonful of it intimately with the yolk of an egg, add a few drops of essence of peppermint, and half a tumbler of sugared water, so as to obtain a *lait de poule*. By this means the taste and characteristic odor of the oil are entirely covered, and the patients take it without the slightest repugnance. Besides, the oil being thus rendered as miscible as the water in all its proportions, is in as complete a state of emulsion as the fats at the moment they penetrate the chyle vessels, consequently absorption is better assured.

KEEPING CIDER.—In 1869, a writer in the N. Y. Sun, says that he purchased a small farm in New Hampshire, and in 1870 (the bearing year) made 23 barrels of cider, averaging from 36 to 48 gallons each. He bought in Boston very sound, empty, iron-hooped whisky casks. In making his cider, he filled the casks himself, as the cider came from the press. To allow the pomace to be any considerable time in the trough causes the spirit to evaporate, and the cider turns red; but if it is at once barreled as it comes from press, it is nearly white and will keep for years, the spirit being in it. He bunged the barrels at once on filling; if they burst he let them go. He never lost but one. He sold some of his cider the next Spring for bottling without racking off, and after two years drank some at a gentleman's table in Boston. It was white, clear, and far better and more delicious than Rhine wine. His apples were natural fruit, and all No. 2 Northern Spies, Baldwins, and Spitzenbergs. (No rotten ones.) As apples are plentiful this year, try his method and you will have clear, spirited, and fine cider, with nearly double the strength of ordinary cider. As long as the liquor is closely bunged from the air it will be sweet. As cider is the natural wine of our country, he is astonished that some scientist has not taught our countrymen to make and preserve it properly long since.

HOW TO GET ON IN THE WORLD.—To show what can be done by industry and pluck, a writer in the Ohio Practical Farmer refers to what a young German has done under his own eye. He hired him in March, 1875, for one year, at $18 a month, for seven months, and $15 for the remaining five months. He could not speak a word of English, had no money, and not even an acquaintance in Ohio. He saved about $150 that year, and then rented four acres of land and went to gardening. The writer does not know what he is worth today, after five years of gardening, but he has a good horse and wagon, hot-bed sash and frames that must have cost him over $200, plows and tools, and comfortable furniture for

his house, and money laid up and is already beginning to talk of buying a small farm. He thinks, however, that he is worth nearer $2,000 than $1,000 His business has increased so that he keeps considerable hired help, on which he is making a profit, and he is known and respected by the entire community, The writer concludes, if he had spent a hundred dollars the year he worked for him, he doubts if to-day he would have been doing business for himself.

IODINE has been recommended as a substitute for quinia by good authorities. The dose for adults is 10 drops of the tincture in one-third glass of sweetened water, thrice daily. For children, proportionately less. We find in the Druggist's Circular an essay read by F. Grinnell, M. D., on the value of iodine as a remedy for malarial diseases, from which we make a few quotations:—"At that time," the Doctor says, "I treated 135 cases of intermittent fever, 74 being males and 61 females; these included children and in some instances infants. The quotidian and tertian types of the fever were the forms principally presented. I also treated four cases of diarrhea and eight cases of neuralgia, each of malarial origin, using the same remedy, only adding astringents or opiates as indicated. One hundred and forty-seven cases were thus treated with the iodine, and the results were *fully equal to those treated with the sulphate of quinia*. The remedy seemed to act almost as by magic; in many instances the paroxysms were not repeated after the medicine was given, though the doses were repeated for a day or two after the cessation of the fever. In cases of enlarged spleen there was a more speedy reduction in the size of that organ than when the sulphate of quinia was used." The fact that the cost of iodine is so little in comparison with quinia, especially renders it a boon to the poorer classes, who can ill afford to purchase quinia, and the physician who treats them and furnishes the remedy finds his bill for drugs not an insignificant item of his expenses, with little to show in return. The fact that iodine exerts such a pronounced effect upon those very glands which appear to harbor the malarial poison seems to render its great value in these cases quite philosophical. It only seems strange that in the settling up of our great West, with malarial poison ever opposing the onward march of civilization, and the great scarcity and high price of quinia, the value of this remedy had not been earlier and more generally appreciated.

KAEMPFER'S PLANTS.—At the British Museum the other day—that is, in the New British Museum at South Kensington—we (London Chronicle) had an opportunity of seeing the herbarium made by Engelbert Kaempfer in Japan in the last years of the seventeenth century, hard upon two hundred years ago. It was interesting to see among them the camellia, the aucuba, the sciadopitys, the maples, the weigelas, the retinosporas, the azaleas, and a number of plants now familiar in our gardens. Some of these were figured and many described in Kaempfer's *Amœnitates*, published in 1712. Others were published by Sir Joseph Banks, in 1791, in his "*Icones Selectæ Plantarum quas in Japonia collegit et delineavit Engelbertus Kaempfer.*"

SMOKING ORCHARDS UNSUCCESSFUL.—A writer in the Rural World describes an unsuccessful attempt to keep off the curculio, by smoking his trees, fifty in number. A barrel of coal tar was bought, and several holes dug six inches deep through the orchard. Corn cobs were dipped in the tar, placed in the holes, and set on fire. The operator says that he "got a nice smoke," and had his holes to suit the wind. This work was repeated three mornings in each week for a month. The whole process did no good, the young fruit being badly stung. As this remedy, comments Mr. J. J. Thomas, is frequently recommended by those who have given it little trial, such failures as this are worth recording. The jarring process, properly conducted, is easier, cheaper and more efficient; if not properly applied, it is of little use.

FEEDING BEES IN WINTER.—Prof. Cook writes to the N. Y. World on this subject as follows: After an unpropitious season bees are apt to go into winter-quarters ill provided with stores. Well informed and cautious apiarists, aware of this lack, feed weak colonies during the Fall sufficiently to supply the need.

It is never desirable to feed liquid stores, either honey or sirup, in Winter, and not well to feed at all unless positively demanded. The best way to feed, if we must, is to put candy made from granulated sugar on the frames, just above the cluster. This will be kept warm, and can be taken, and will disturb the bees so little that, if it must be done, it will generally succeed. If the bees can pass the Winter until March—and the stores needed during the cold Winter are very light, compared with those consumed later after brood-rearing commences—then we may feed either honey or sirup. Then the bees can fly occasionally and will receive no harm from liquid food. This food, too, will stimulate brood-rearing, and thus work a double benefit. The feeder will need to be so constructed as to keep the food near the cluster or the bees will not appropriate it, because of the cold.

No one should fail to use a division-board in Winter and Spring. Keep the bees crowded on to so few frames that all will be covered, and Spring dwindling will do little harm.

A HEIFER WITH A WOODEN LEG.—A valuable heifer belonging to a farmer near Northallerton recently broke its leg, and it had to be amputated. Truth (London) says that the animal has since been fitted with a wooden leg, on which it moves about with the utmost ease, "which proves the absurdity of hastily ordering the destruction of animals that meet with such accidents."

VICK'S NEW SEED HOUSE.—FIG. 389.

JAMES VICK'S NEW BUILDING.

AMONG our seedsmen we know of no one that holds a higher place in the esteem and confidence of plant-loving people than James Vick, of Rochester, N. Y. He has earned this place by fair and liberal dealings with his patrons through many years. Whether Mr. Vick, by a life-time of hard, unremitting labor, has been prompted merely by a desire to establish a large and remunerative business, or whether a love of creating an appreciation of the floral treasures of the world has been the stronger incentive, it would be difficult to judge, for he has been eminently successful in both respects.

To meet the requirements of his increasing business it has been necessary for Mr. Vick to increase the area of land under cultivation and to erect new buildings. The most conspicuous of these latter is one built last Summer about two miles from the heart of the city, an engraving of which is herewith presented. It is one hundred and sixty-two feet front and fifty-four deep. Here Mr. Vick has his packing and shipping rooms, printing office, bindery and business office. Convenient to the grounds and green-houses, his artists also find in it convenient and congenial headquarters. Easily accessible by horse-cars, which leave the city every few minutes, Mr. Vick designs to make these grounds worthy the visits of friends who pass that way.

Everywhere.

NOTES FROM WESTERN KANSAS.

I COULD write an article on Kansas for the RURAL and make the whole State, from north to south and from east to west, a Paradise for the new settler, and verify every statement of enormous production by the affidavits of good men. I could make the climate delightful and the rainfall abundant, and support the statements by the records. On the contrary, I could write an article, supported by affidavits of good men, that neither Kansas nor any part of it is a desirable place for the immigrant; that the climate is detestable, the soil poor and the rainfall totally insufficient to insure fair crops, and support the statements by the records. I can go into the neighborhood of orchards that produce thousands of bushels of the finest apples and pears and peaches in the world, and I can get the statement of men near-by who "han't got" any orchards, that fruit won't grow in Kansas; and so on through the whole catalogue. Now can't you see where the truth comes in? The same set of men that are "starving" in Western Kansas to-day would have starved in Central Kansas five years ago, or in Eastern Kansas 20 years ago; and they would starve in Queens County or Orange County, or in any other county of New York or New Jersey or Pennsylvania if they settled there under like circumstances (were it possible) in any year, There is a great deal of this starvation going on every year on the frontier, but it won't pay to get it prominently before the public, except about once in five years. Kansas has had four eras of it now; one more, possibly *two*, and then the western line will be passed and Kansas be freed from this disgrace.

Immigration often seems to move without judgment or adequate reasons, and until you can persuade the man who has worked on shares some of his "wife's father's land" for a few years, the shoemaker who knows more about farming than John Johnston, or the factory operative who knows more than the proprietor of Kirby Homestead, and the machinist who knows more than the RURAL, that their very valuable services cannot be spared from the East; in short, until you can sort out and fit each one to a proper and suitable place adapted to his or her capacity, means and profession, and then by some miraculous power hold each to his or her place, I don't see how you are going to do away with destitution and suffering on the frontier.

As long as great railroad corporations subsidized and pampered by government, have millions of acres of land to sell and can make more money by selling it to poor people than in any other way (for as a rule they can sell it three or four times over on account of defaulted payments, and get in the long run two or three prices for their land); just as long as Government by its land laws invites speculation in *poor men's rights*; just so long will destitution and suffering exist, and anything either I or you could write won't check it, in my judgment.

Given a steam engine: look at it: under the manipulations of its master, what a power! what a display of the ingenuity, skill and work of man in its construction! At the will of its master it can walk, run, draw great loads, run factories, propel great palaces over the ocean, etc., etc. Well, right in the mountains of Pennsylvania are the iron, the coal, the water, all the elements of this great power. Let the editor of the RURAL go out on Long Island and on the south side gather up the clam diggers, the fishermen, the coasters; let him go into North Hempstead and gather up the farmers who draw manure from New York City, and raise great crops of wheat and Timothy hay and have great dairy barns and feed brewers' grain to cows and furnish the city with *pure milk*; let him go over to Oyster Bay and Little Neck and get the oystermen, or down to Flushing, Astoria and Flatbush and get the "truck"men, and then go about the city and gather up the stevedores, the draymen, the porters, the clerks and book-keepers; get them all together by thousands and show them the engine. Tell them there is nothing about it but iron, wood, coal and water, and that all these exist in inexhaustible quantities down in the mountains in Pennsylvania, and that they can be had for almost nothing. Let all go down there and go to making engines.

Don't they know all about catching eels and porgies, bony fish and blue fish, sea bass and black fish? Can't they sail a sloop or scull a boat to perfection? Don't they know all about feeding brewers' grains, and raising and selling Timothy hay; how to raise onions, celery, Lima beans, radishes, cucumbers and cabbages; how to load ships, draw boxes and barrels, tie up packages of dry goods and groceries, enter them on the books and foot up the ledger? Can't they do these things and many more? They are an intelligent, enterprising and go-ahead set of people, and, of course, they can make steam engines and run them, too, and they will. They've been fools to live as they have in such a humdrum manner, but now they will all make engines and every man of them will have one of his own, and be independent.

Now, shut your eyes and dream out a few years' existence with this motley horde of engine-makers out in the wilderness of the mountains--and they are forced, too, to get their bread and butter at the same time out of the business—and you will have a counterpart of this starvation horde in Western Kansas.

Given a soil of incomparable fertility—proof: don't the railroads and State fairs show the products, the great ears of corn, the large grapes, the plump wheat, the big melons, the enormous potatoes, the luscious fruit? Yes. Don't the records show rainfall, sunshine, dew? Yes. Isn't the land that will produce all these things free to all? Yes. Let all go and take big slices and make farms and all have big potatoes, golden wheat, fine cattle and horses and luscious fruit. *The idea is a grand one*, and under it, gather up thousands of broken merchants and bankers, dilapidated preachers and lawyers, machinists, clerks, bookkeepers, draymen, sailors, railroad laborers, factory operatives and the men who worked their "wives' fathers' farms on shares," with now and then a good practical farmer for spice, a few keen speculators and a lot of young men just out of school to make advisory committees of; put them out here with little or no capital on the wide frontier; stay with them a year and then I think you could take in the situation.

The two past seasons have not been propitious, yet they are not the cause of this destitution, but they serve as a pretext for getting it before the public and soliciting aid. The real cause is behind, and is in the character of the immigration. Such a mass of helpless humanity thrown down together anywhere under the delusive idea that they can get something for nothing, would be destitute and suffering. It is just like the mining mania. One in twenty who have no means or experience "strike it rich"; the other nineteen drag their weary way back, if they can, to old homes and old-time ways of getting bread; but the one successful one will be the "will-o-the-wisp" that will lure 20 more into the same position in order to find out which will be the one successful man. They are all that one till the trial.

So in the settlement of these Kansas lands the agricultural wealth is here, just as the gold is in the mountains, and as the years roll round it will be developed; but of the developers three-fourths will be stranded and wend their way back to the East.

The RURAL talks about "emigration recoiling;" it has recoiled for twenty years, but every recoil creates an undertow that sweeps back more on to the great uncultivated area than the recoil bore from it. No doubt there is a vast amount of destitution in Western Kansas and also in other parts, but it came here from further East, and has held its own remarkably well. Of starvation there is none, unless the folks choose to starve rather than apply for food through the regularly constituted authorities. Every municipal township has its trustees, and every county its County Board of Commissioners who are authorized and compelled by law to relieve and support, if necessary, every applicant who can prove his necessity, and they can raise money by taxation, or bond the county, under limitations, for that purpose. H. L. J.

RURAL SPECIAL REPORTS.

CANADA, Pembroke, Ont., Nov. 6—We have an old and enthusiastic gardener here who gives the RURAL seeds a thorough trial, and under his care they have all done more or less well, especially the Beauty of Hebron Potato. The shrub—whose name I know not—did not bloom with us the first season, but the present year it put forth a profusion of blossoms and was the admiration of all. Please give us full information about it. [Our friend forgets that we have no means of knowing to which he refers. EDS.] Some of the hollyhock seeds produced plants with flowers nearly black. I inclose a leaf of one of the plants which has grown with us for two years without producing bud or flower—what is it?—T. S.

[The leaves look like those of the deutzia seeds of which we sent out two years ago. It will probably bloom next season. It ought to have bloomed last year.—EDS.]

CANADA, Frazerville, Quebec, March 9.—Your Mold's Oats and Golden Mangels did splendidly with me. The oats were sowed on the 25th of May and cut on the 25th of September, well ripened. The Cuthberts entirely failed; they were too dry when put into the ground. No magnolia seeds have yet sprouted, but the pentstemons have come up; also two of the man-root seeds and many of the Iris Lævigata. Two of the Abies Sibirica had grown in the house, but died in July when in the open ground. J. E. P.

ILL., Ludlow, Champaign Co., Nov. 6th.—During the first half of October the weather was fine, with no hard frosts till the 17th, when the storm which prevailed over the Northwest amounted here to a Texas "norther," and gave us a skim of ice and a light flurry of snow. Since then we have had some pleasant weather and some chilly and November-like, but dry and favorable for work. But to-day is snowy with about two inches on the ground, and a chilly wind blowing keenly from the north. A great deal of Fall plowing has been done, and corn husking is only fairly begun. Corn is turning out from 15 to 40 bushels per acre, with 25 about the average, as nearly as I can judge, which, considering the large acreage, poor cultivation and unfavorable season, is as good as could be expected. Wheat is looking well thus far with about the right amount of top. Fat hogs are worth $4.15 to $4 25 ₱ cwt, live. Stock hogs are in good demand and hard to buy, probably because poor corn is considered worth more to feed than to sell. There is no disease among swine as yet. A few cases of epizooty are reported among horses. "G."

INDIANA, Hall's Corners, Allen Co., Nov. 5.—The Ennobled Oats did well; I have about three quarts for seed another year. The cow-peas also turned out a good crop; but unless the stock will eat them, I don't know what they are good for. The other seeds also did well. I think the Seed Distribution worth to me the price of the paper. Your corn statement shows a very good crop, though I think my boy, under 18, can make as good a showing on one acre. We gave him one acre for competition with other boys of this State and others, for a premium offered by one of our papers for the largest yield of corn on an acre. W. H. H.

[Please send us particulars about the yield, culture, kind, etc., etc., of that boy's acre. Eds.]

KANSAS, Freedom, Butler Co.—The acreage of wheat is larger than ever in this section and it is looking very well considering the dry weather; no rain in four weeks. Feeding commenced this year on Oct., 5, and we have to feed until April 20 or May 10. Markets are active. Hogs have been up to $4 35 per hundred; but are down now to $3.25. Beef cattle have been selling for $4.50 from the sward; butter, 25c; wheat 65 to 80c., and not much coming into market. W. J. B.

NEW YORK, Pitcher, Chenango Co., Nov. 9—The last two days have been warm and pleasant. Last Sunday the air was quite full of snow, and the wind blew a perfect gale. We have had heavy rains during the past few weeks; the ground is full of water. It has been very wet for plowing. The great crop of apples is nearly all gathered. We dispose of them mostly by feeding them to stock. Cows, horses and hogs all help to save them. One of my neighbors had over 3,000 bushels of grafted apples. He saves a few for family use and the rest he feeds just as fast as the cows will take them. L. W. S.

WIS., Louisville, Dunn Co., Nov. 6.—We have had good weather for husking corn and plowing. Prices are good and farmers are in fine spirits. So are laborers, as work is plentiful and wages good. Wheat, No. 1, 80c; hay, $9 per ton; live hogs, 4½c; beef and stock cattle, 2½c. to 3c; potatoes, 30c. A great many of them are rotting. Prices of good land are low; good, improved farms can be had for $10 to $20 per acre with good water. We always have a healthful climate, and plenty of work for all who come to this place to live. Wages now, $1 per day and board. We have had some snow but it has all gone and the weather is delightful. T. M. S.

WISCONSIN, Eagle, Richland Co., Nov. 6.—Fall wheat was never known to be so slow in making a start. Quite a large acreage has been sown. We sow by the first of September or the last of August, and get about 25 to 30 bushels per acre. Corn-husking is well under way. Corn is only an average crop and we have plenty of hogs, sheep and cattle to feed it to. The weather has been rather dry for a month; it is raining now. Lots of Early Amber Cane are raised here—over 6,000 gallons of sirup have been made in this town. J. H. F.

WIS., West Salem, La Crosse Co., Nov. 4.—My Mold's Ennobled Oats rusted badly and were late in ripening. The beets were fine, and the cow-peas ripened. Blount's Corn matured earlier and better than last year. The weather has been quite hot the past week; farmers are busy husking their corn; the crop is not as good as was expected. M. L. H.

The Querist.

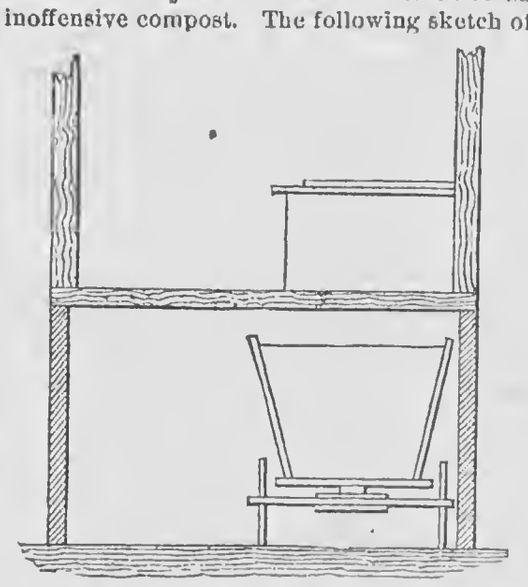
ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention.]

Constructing a Privy.

J., Leroy, N. Y., asks how to construct a privy vault adjoining a dwelling-house so that no unpleasant odor shall arise.

ANS.—This is a question that presents two points of consideration; first, the construction of the vault, and, second, the disposal of the refuse. For if this is allowed to accumulate, no means whatever can prevent the inevitable consequence of decomposition and foul odors. We suggest the following plan which will be found convenient and effective at very little cost and trouble and which will completely avoid every inconvenience that attaches necessarily to our present barbarous and dangerous system. Let the house be raised three feet above the ground, upon a close basement. In this basement have a movable vault mounted upon low wheels which can be drawn away when filled or at regular intervals of a week or a month, and emptied upon the manure heap where it will disappear; or, in places where there is no manure it may be thrown upon the ground and covered up or buried in it or reduced by the admixture of earth to an inoffensive compost. The following sketch of



PRIVY VAULT.—FIG. 390.

the basement (the doors being removed), will help to make the method plain. The movable receptacle may have a foot of earth or sand in the bottom as an absorbent or deodorizer and a box of dry earth with a scoop may be kept in the house and one responsible person should make a practice every day of adding sufficient of this earth to keep the contents of the box inodorous. When necessary it may be removed to some convenient place and allowed to accumulate until it can be used or disposed of. There is no better fertilizer for grass lands than such a compost and any farmer would be glad to have the disposal of it. This plan would remove what is now a nuisance and a constant menace to health and life.

Feeding Dairy Cows.

A. W., Everett, Pa., says—"Rye is worth 66 cents per bushel; oats, 30; corn, 35; millet and Hungarian each about 60; buckwheat, 50; wheat bran and middlings, $1 00 per hundredweight; and bran, separate, 85cts.; clover hay, $10 per ton; Timothy, $12.; corn fodder five cents per bundle; butter, from 20 to 25 cents per pound. Now, I would like to know which of the above-mentioned grains I had better feed to make the most clear money on my butter, and which kind of hay I had better feed, or had I better feed fodder? Will it pay to cut the fodder? We have tread-power and can hire a cutter at $1 per day. I would also like to know how many cows it would pay me to keep at the above prices for feed. Butter gets as low as 10 cents per pound in Summer. Grain-fed beef can be sold for four cents, live weight—which will pay the best? Would it pay to steam the feed at the above price? Could I get a six-horse vertical steam engine that would run my machinery profitably, which consists of a small Separator Union Grist mill and other farm machinery, and that could be made to steam the feed also by means of pipes or any way you could suggest?"

ANS.—The cheapest (that is the best) feed for cows is clover hay and corn finely ground mixed with an equal portion of bran and middlings. Corn fodder at five cents a bundle, is dearer than clover hay at $20 a ton, unless the bundles are very large indeed. The comparative value of good clover hay and corn-stalks is as 20 to 8; that is, hay at $20 per ton is equal to corn-stalks at $8. By all means cut the hay, wet it and mix the meal with it. Ten pounds of cut hay thus fed are worth 15 pounds given loose. You can get an excellent fodder cutter for $30 to cut for 40 cows. A horse-power will be better for you than a steam engine and much cheaper; steaming food is one of the obsolete, so-called improvements, and is rarely practiced by those who farm for profit. Keep as many cows as you can get feed for, if they are good ones, and make butter only in the Winter and grow feed in the Summer.

Roup in Fowls, Etc.

J. S., Greenville, Pa., asks, 1, which do we think the best breed of fowls for general purposes—the Plymouth Rock or Light Brahma; 2, which of the two is the hardier; 3, what will cure the roup.

ANS.—1, Plymouth Rocks. Both are excellent but we think there is a little point in favor of the P. R. 2. There is little difference in that respect. 3. This disease is very contagious, and the affected birds should therefore be promptly separated from the remainder of the flock, and put into a dry, warm but well-ventilated place. There is a great number of nostrums for the cure of this disease. An old remedy is five drops of tincture of iron in a tablespoonful of water three times a day. Give scalded feed well seasoned with Cayenne pepper. Another is confinement alone in a warm, dry place, and a tablespoonful of castor oil every morning for a week. In aggravated cases the following recipe is strongly recommended:—Powdered sulphate of iron, half a drachm; capsicum powder, one drachm; extract of liquorice, half an ounce; make into thirty pills, give one at a time, three times a day for three days. Then take half an ounce of sulphate of iron and one ounce of Cayenne pepper finely powdered; mix carefully a teaspoonful of these with butter, and divide into ten parts; give one part twice a day. Wash the head, eyes and inside of the mouth and nostrils with vinegar, which is very cleansing.

Melon Raising in Oregon.

A correspondent whose name we have mislaid, asks several questions respecting the raising of melons in Oregon, to which we reply as follows:

ANS.—We should doubt melon growing for market being a paying crop in Oregon, but of that our correspondent must be the best judge. There are two plans for advancing the plants earlier; one by selecting the warmest ground at command, and after thorough cultivation, marking out spots at the proper distance for the hill throughout. Then make holes, say a yard wide and six inches deep, fill with horse manure in a state of fermentation (other manure is not so good, being too cold) and replace the soil over the top. This will make hills, and be warmer and drier than on the level. These hills may be covered with any cold-frame lights, or, if such lights are of use for other purposes in the Winter, they may be used for both purposes. If no such lights are used, a rough frame, 18 inches square, covered with glass, may be used and raised up to allow the plants to run under, and be removed when the cold rains are over. But probably the best plan would be to prepare a hot-bed in the usual manner with manure; sow the seeds in four-inch pots, and plant out, without breaking the roots, on hills prepared as before advised, after the cold rains are over; but we think neither would pay unless melons are very high-priced, and we should try the venture on a small scale first.

Treatment of Skins, etc.

W. J. B., address lost, asks, 1, how to tan skins with the hair on, so as to make them soft; also, how to tan skins with the hair off; 2, how to preserve bird skins until they are mounted—three or four weeks; 3, Is there any creamery that will do where ice cannot be had, but where there is cold well water?

ANS.—1, Skins cannot be tanned with the hair on; instead they must be tawed and not tanned. Tawing is done with alum and salt. The skin, either fresh or steeped in water, is spread and covered with a mixture of powdered alum and salt in equal parts. It is then folded in two, the flesh-sides together, and either rolled up, if it is a single skin, or piled in a heap if there are many, and kept so for 10 days. Each is then scraped, and rubbed dry with a piece of chalk, being pulled and stretched meanwhile to make it soft and pliable. If the hair is to be removed, this is done first by spreading lime paste on the flesh-side and leaving the skins placed in pairs, flesh-sides together, in a heap until the hair parts easily. The skins are then steeped in alum and salt liquor. 2, Bird skins are dusted with arsenic, which preserves them from decay and from vermin. 3 Cold well water will make a good substitute for ice as far as it goes. Read carefully the articles on "The Dairy Cow," in which all such points as these are treated. You can have a cold-water tank, as described in article No. 14 on Spring Houses, if you will change the water.

Lost Nation as a Winter Wheat.

E. W. G., Somerset, Pa., asks for full information about Lost Nation wheat as a Winter variety.

ANS.—We must refer our inquirer to late RURALS for a report of the yield of Lost Nation as a Winter wheat. From our plot of last Summer we carefully selected the best heads, the grain of which was sown again in September as one of the seventy-seven varieties now growing at the Rural Farm. We can state positively nothing as to the value of this wheat as a Winter sort. Another year will probably enable us to do so. Of all the wheats we have thus far tried, we are best pleased with Silver Chaff, Velvet Chaff and Shunmaker.

Miscellaneous.

S. S. B., Westchester, N. Y., asks, 1, when should ground bone be applied to grass land; 2, will it be of any service to clover; 3, when should it be applied to corn.

ANS.—1. Ground bone, if the flour of bone, will be felt in its effects in one or two months if the weather is moist, but it is safest to apply it three to six months before it is expected to be wanted by the crop. Coarse ground bone does not become as readily soluble. 2. When applying coarse ground bone to a field of corn one Spring there was a quantity left over, which was directed to be sown upon an almost barren place in the meadows, but where there were some Timothy and some red clover growing. The result was not perceptible at haying, but in the Autumn the growth of grass and especially clover was three times as great as in the surrounding field, and the cattle ate it very closely. 3. Coarse bone applied to corn in the Spring has but little influence upon the crop; if applied the Fall previous bone stimulates the starting of the corn crop, but unless other manure is used to continue the food supply, the corn shows that the food from the bone is early exhausted.

J. L., Auburndale, Mass., says: "This Spring I sowed a lot of large "Red Weathersfield" onion seed on poor land very thickly, and did not cultivate them, intending them for setts, next Spring, for early onions; they have grown about as large as hickory-nuts; will it be safe to set them out next Spring or would they be likely to run to seed? The tops have all died, and they appear to be quite ripe."

ANS—Our friend does not state when they ripened off. If they have grown all Summer, the onions will have matured and will certainly run to seed next season, if planted out.

N. J. A., Grand Rapids, Mich., asks, 1, whether Blount's Corn is likely to mature in that latitude; 2, where seed can be had; 3, where can Ennobled Oats be bought.

ANS—1. We are of the opinion that it would. You should save seeds to mature, and we have no doubt your season would be long enough the second year. 2. Probably of D. M. Ferry, Detroit, Mich.—price about $2 50 per bushel. 3. B. K. Bliss & Sons, N. Y. City, are the only firm we know of at present that offer the oats.

D. & C., Danbury, Conn., ask whether if corn-stalks are thoroughly steamed they will be all eaten up, and whether it will pay to cut and steam them; will it pay to steam all kinds of fodder?

ANS.—The expense of labor and fuel is usually more than the saving in using steamed fodder, if there is any economy at all. Cutting the fodder and grinding grain *will* pay beyond a doubt, but this generally is as far as economy can go in preparing food.

H. P., Cornwall, Vt., asks how to kill ferns or brakes.

ANS—There is no known remedy but uprooting them and often where the pastures are so rough that it is impracticable to plow, there is no other way but to dig them up with a grub hoe, or to confine a drove of hogs upon them. In the latter case water must be supplied the hogs and some corn scattered among the brakes.

R. S. P., Bolster's Mills, Me., sends a fern for name.

ANS.—This is Adiantum pedatum—the Maiden-Hair Fern—the most beautiful of all our ferns, abounding in damp, rocky woods. The above question was mislaid.

A. S. S., Union Co., Pa., Mr. J. G. Burrow will furnish you a catalogue without charge which will give you all the information respecting the Jefferson Grape you desire. His address is Fishkill, N. Y.

Inquiries are made respecting the dictionary offered in advertising columns for ten cents.

ANS.—It is the same as that previously offered, only the cover is paper.

S. L. L., Hanley, Ia., asks how much should a large mangel-wurzel weigh.

ANS.—One weighing 15 pounds would be considered of fine size.

Y. J. W., Topsham, Me., sends leaf of a shrub for name.

ANS.—The leaf is not known to us.

THE
Rural New-Yorker,
PUBLISHED EVERY SATURDAY.

Conducted by
ELBERT S. CARMAN.

Address
THE RURAL NEW-YORKER,
No. 34 PARK ROW, NEW YORK.

SATURDAY, NOV. 27, 1880.

READERS are respectfully requested to bear in mind that the RURAL NEW-YORKER is promptly discontinued at the end of the subscription term. We keep no subscription account books, and we *cannot*, therefore, regard requests that the paper be continued, unless accompanied by the subscription price. This is $2.00 per year and (please note) $1.10 for six months. Those desiring our Seed Distribution—which is necessarily strictly limited to subscribers—should add their share of the postage—viz., six cents—unless they subscribe in connection with the other journals with which the RURAL clubs—as already announced.

LOSSES IN BREEDING AND PURCHASING RACE-HORSES.—Lord Roseberry, who married a daughter of the wealthy English banker, de Rothschild, recently sold 15 of his stud for the very low price of 3,370 guineas. One of these horses alone had cost him, three years ago, 6,000 guineas ($30,300); he now fetched only 135 guineas ($680). Another horse for which he paid over 1,000 guineas ($5,500), when a yearling, sold for 75 guineas ($379.) There is nothing more uncertain than the breeding of race-horses, and millions upon millions of dollars are annually lost upon them in England, and a great deal of money in our own country. It is safer to breed trotting horses if one is determined upon going into fancy animals; but it is infinitely more sensible and profitable to breed handsome carriage horses and good, strong farm and work horses.

RYE-BREAD is the ordinary food of the working classes in Germany, where 7,300,000 tons of rye are consumed yearly. The average rye crop is 6,200,000 tons; but this year it is only 5,200,000 tons, so that the country must either import 2,100,000 tons, costing $89,200,000, or else substitute other forms of food. The import duties on the rye needed would be 21,000,000 marks or $5,000,000—a direct tax on the absolute necessities of the people. Moreover, the scarcity will, of course, raise the price of this sort of food and also that of others that may serve as substitutes. In Russia, too, the rye crop, which there also is the staple food of the lower classes, is reported to be 40 per cent. short, and in St. Petersburgh the price of rye-bread is twice as high as in ordinary years. Indeed in all the Baltic region people are suffering severely from the partial failure of this crop last season.

TAKING the country through, wheat this year is about 10 cents per bushels lower than at the same date last year; corn about two cents per bushel higher; hogs 75 cents per 100 pounds higher; lard $1.10 per 100 pounds higher; pork $2.50 per barrel higher for January delivery; for earlier delivery the price is not so high, as there is a considerable amount of old stock on hand which will not be "regular" after New Year's, and will, therefore, most likely be thrown on the market before. Winter hog packing has begun all over the West, and the business is brisk. Farmers are selling freely, both because tney are satisfied with present prices and because, as a rule, they expect better figures for corn, and, therefore, think they can make more profit by selling it later on than by feeding it to the hogs. The amount of packing in the West thus far considerably exceeds that at the corresponding date last year, aggregating at 15 chief points 915,000 on Nov. 15 against 595,000 at the same time in '79, an excess of 320,000 hogs.

MIGRATION TO AND FROM CANADA.—Taking advantage of the distress in Ireland, Canada is seeking to obtain thence a desirable class of agricultural laborers. A telegram from Toronto announces that the Minister of Agriculture has submitted to the home government a plan the main points of which are the free transportation of emigrants from the afflicted districts at the expense of the imperial government, and the grant to them by the Dominion of certain lands in the northwest, together with enough implements and seeds to enable them to start new homes there and develop the country. The carrying out of this plan would be a good thing for the distressed Irish peasantry and not a bad one for our thinly-settled northwestern territory, for most of the newcomers could be pretty sure to find their way thither before long. There are not more than two or, at most, three European countries from which the tide of immigration to the United States is stronger than that from Canada. The records of the Huron district, the leading point for crossing the line, report a total of 94,375 emigrants from the Dominion to this country during the year ending June 30 last. Of these only 18,936 came from various European countries, while 75,435 were Canadians.

THE NEW YORK EXPERIMENT STATION.

We have already informed our readers that an appropriation of $40,000 has been made by the Legislature of New York State for the establishment of an agricultural experiment station. The best plan to render this station of most service to those who are to be benefited by it is to be determined by a Board of Control, as we have explained. Several meetings have been held and the resolutions adopted have been forwarded to a committee appointed by the Board, for its guidance. At all of these meetings—and this is what we wish to comment upon—the subject of practically testing the value of commercial fertilizers has been mentioned as if that were the chief object of establishing the station. This is a question which every farmer must determine for his own soil, even though a sub-station were established in every county in the State, and the less time and money appropriated for that purpose, the more there will remain for investigations which may prove of real service to the farming community. It is to be hoped that the control of this station will not fall into the hands of specialists. It may be necessary to employ chemists, geologists and entomologists, but only as department officers. The Director should be an educated, earnest farmer.

OLD-TIME EPIZOOTICS.

Thanks to the general use of steam in traveling, it is comforting to reflect that in spite of the very great annoyance and inconvenience caused by the horse diseases in recent years, particularly by the epizootic which prevailed in the year 1872, the inconveniences to which people are subjected nowadays in the lack of horses are really much less grave than those which our ancestors had to contend with, in similar circumstances. For our forefathers, the prevalence of a severe epizootic meant the cessation of all traveling and transportation, whether for long or for short distances; excepting, of course, such service as may be done by oxen and by men on foot. Some idea of the gravity of the situation is suggested by the following extracts from an old Birmingham newspaper which we chanced to come across a few days since. On February 4th, 1760, notice was published that "the horses belonging to the Birmingham stage coach are so much affected by the present distemper that prevails among them, that its journies are obliged to be discontinued until their recovery." And in the week following another notice appears underneath that of Feb. 11th, 1760, "the horses belonging to the Birmingham stage are still so bad that it would be dangerous to attempt their going with the coach this week; but on Monday next, the 18th, Mr. Peyton proposes that the coach shall set out to go from hence as usual; after which he hopes it will meet with no other interruption."

THE WHEAT CROP OF 1880.

ELSEWHERE we give by States the Department of Agriculture's estimate of the wheat crop of the country for 1880. It will be seen that the aggregate yield this year is put at 480,849,723 bushels against 448,755,118 bushels last year, an increase of 32,094,605 bushels. The acreage, however, this year is estimated at 36,037,950, against 32,835,909 in '79, an increase of 3,202,041 acres. The increase in total yield, therefore, is proportionately less than that in acreage, so that the average yield this year is 13.03 bushels, against 13.7 last year; 13.1 in '78 and 13.9 in '77. Previous to 1877 the average yield for 15 years was 12.2. The proportion of the wheat crop, per head, kept at home for food, seed, etc., for several years was as follows: 6.03 bushels in '78–9; 6.09 bushels in '77–8; 5.34 bushels in '76 7; and 5.23 bushels in '75–6. Estimating the domestic requirements of '80 1 at six bushels per head of a population of fifty millions, we have an aggregate of 300,000,000 bushels, which, deducted from our estimated total yield, would leave 180,849,723 bushels for exportation. In the above estimate of domestic requirements, however, is included all the flour made in the country. Of this an equivalent of 27,057,385 bushels of wheat was exported during the year ending June 30 last, and the equivalent of 25,333,713 during the preceding year. It is reasonable therefore to suppose that an equivalent of at least 29,000,000 bushels of the present year's wheat crop will be exported in the form of flour. Deducting this amount from the domestic supply and adding it to our exportable surplus, we have for the former a total of 271,000,000 bushels, and for the latter 209,849,723 bushels. From a careful comparison with a large collection of other trustworthy estimates, however, we feel pretty confident that the agricultural Department's estimate of the aggregate yield is somewhat too high. For California and Oregon alone an increase of 15,491,200 bushels is given, which, judging from the Department's overestimate of the yield there last year and from other data, seems to us excessive. While conceding to the Department's Bureau of Statistics a fair measure of care in its inquiries and estimates, we are persuaded that the total wheat yield this year is from ten to fifteen million bushels less than its estimate, and that our exportable surplus will be correspondingly smaller.

AGITATION NEEDED.

Last week a large number of representative cattle raisers and breeders met at Chicago and passed a series of resolutions urging Congress, at its next session, to adopt prompt and effective means for the suppression of pleuro-pneumonia among our herds. For upwards of two years, the RURAL NEW-YORKER has persistently pressed upon public attention the necessity for energetic Congressional action in this direction. While many other agricultural papers, both East and West, have either belittled the danger to which our vast cattle interests have been exposed from this destructive and insidious malady, or persistently denied its existence among us, we have repeatedly insisted on the need of legislation both to prevent its spread and to extirpate it from our borders. The Boards of Agriculture of Massachusetts, New York, New Jersey, Pennsylvania, and some other States, have already joined us in urging upon Congress the need of speedy action in this matter, and resolutions looking to this end should be passed in every other State at the earliest opportunity. We have just learned that the National Grange, at its annual meeting lately held at Washington, passed resolutions urging such legislation. Great as has been the increase of our exports of live cattle to Great Britain of late, there is no doubt that it would have been much more rapid, if freed from the restrictions placed upon it owing to the presence of this disease in a few scattered parts of the country. Among a large and influential class in Great Britain there is every disposition to remove these restrictions at the earliest opportunity. Even within the last few days the cable informs us that a vigorous effort is to be made, at the next meeting of Parliament, to greatly modify the regulations at present governing the importations of cattle from this country. This favorable disposition across the water should be encouraged by vigorous action on this side. Hitherto whenever our English friends have sought to lighten the embargo, it has been objected that it could hardly be expected the British government should be in a hurry to relieve our trade of a burden which our government, owing to its culpable remissness, was doing so little to remove.

Judge Jones, of Ohio, who was lately sent to England by the President to investigate the matter, reports that the present embargo on our cattle causes a loss of from $15 to $25 on each imported steer. Having to be slaughtered at the port of debarkation 14 days after landing, there is not time enough for the beasts to be put in good condition after the hardships of the voyage and the previous railroad transportation. Moreover, the meat has to be thrown on the market whether this be favorable or unfavorable, so that often it has to be sold at a loss, whereas in the absence of restrictions the animals could be well fattened, driven where wanted and slaughtered only when a good price could be obtained for the meat. The number of cattle to be imported from this country during the current year is estimated at 150,000 head, so that a loss of even $15 on each would entail on the trade a total loss of $2,250,000 for a single year. The farmers of this country are the chief sufferers by this loss, a part of which would pay all the expenses of eradicating the plague of pleuro-pneumonia to which it is due. It is notorious that "President-making" and the making of political "records" occupied the time and attention of Congress at its last session almost to the entire exclusion of needed legislation, and that no industry suffered more from this neglect than did agriculture. Now that the President is "made," let us have some honest, useful work from our legislative Solons.

BREVITIES.

RURAL GROUNDS, Nov 22.—Thermometer at six o'clock A. M. 13 degrees.

THERE is a good prospect that we shall be earlier in putting up and mailing our Seed Distribution than we were last year. There may still be a doubt as to the Rural Branching Sorghum—but it is so small that we no longer worry over it—and all the rest are secured beyond a peradventure.

WE have received the following letter from Gerrit S. Miller in reference to our engravings of his stock: "Gentlemen—Yours of 15th inst. inclosing proofs of my Holsteins, is at hand. I think you are doing the best work of the kind I have ever seen. I am well pleased with the copy of the photograph."

WE learn by cablegram this morning (Nov. 22) that the great Eastern Fresh Meat Company with a capital of $1,500,000 has been formed in England. It proposes to import carcasses from North and South America and for this purpose the Great Eastern steamship has been fitted up with refrigerating appliances. Well, while we should wish that as much as possible of the profit of our export meat trade should go into the pockets of our own citizens, we welcome all honorable competition. The more buyers in the market, the better the prices for farmers.

On November 17, the National Grange held its annual meeting at Washington, D. C. As the sessions were secret, there has not been time enough yet for the proceedings to dribble out to public notice. It is said, however, that the reports indicate that, instead of the membership having fallen off, as has been generally supposed, the Grange now numbers as many members as at any time in its history. Nearly half of its patrons appear to be women, to whom its social features are especially attractive and beneficial. In this and other respects the Grange has been a blessing to the agriculture of the country—long may it flourish!

So great has become the substitution of oleomargarine for the poorer sorts of butter in this market, that commission men say that only two kinds of butter can be sold here—creamery and oleomargarine! A new Chicago sensation is that a new process has been discovered for converting lard into butter and that a lard "boom" is among the approaching probabilities. Exports of the stuff have, it is said, been made to Europe where, it is reported, it has given high satisfaction as a butter substitute. Six factories are reported to be turning out twenty-five to thirty thousand pounds a day of the concoction which sells all the way from 13 to 27 cents a pound.

A COMMITTEE of the Elgin Board of Trade has been investigating adulterations of butter and cheese at Chicago and are reported to have discovered that "anti-huff" is largely used there in the manufacture of cheese. This is a compound of alkali, sal soda and other articles which is said to destroy the albumen of the cheese and prevent the latter from puffing up enabling the maker to work in buttermilk. The stuff is used only in making skim-milk cheese and as yet there is no difference in price between the anti-huff preparation and the ordinary article. The stuff has been only lately discovered. Cheeses in which it is used soon become leathery and then break down and crumble to pieces. It is also thought they are injurious to the stomach.

THE BEST AUTHORITIES WILL SOMETIMES DIFFER:—According to the Report of the Ohio State Board of Agriculture the aggregate yield of the wheat crop of that State this year is 52 522,700 bushels, while the Department of Agriculture's Report gives it only 37,792 800 bushels, a difference of fourteen and three-quarter million bushels. The former figures, nevertheless, are said to be based on actual township canvass since thrashing. Last year, too, there was a pretty little discrepancy of 4,476,700 bushels between the estimates of the same excellent authorities, the State Board putting the total wheat yield at 41 052,120 bushels, and the Agricultural Department allowing a yield of only 36,581,360 bushels. Then, too, the former claimed that 2,319,323 acres were under the crop; but the latter could find only 1,876,480 of them.

THE receipts of wheat at St. Louis have been much greater this year than ever before. A late Globe-Democrat says that for fully a fortnight the receipts of wheat there had been nearly as great as those at Chicago. In July and early August there would be nothing remarkable in this, because the Winter wheat of the Southwest, a great part of which goes to St. Louis, is harvested from two to five weeks earlier than the Spring wheat of the Northwest, most of which goes to Chicago; but at this time the receipts of this sort of wheat are usually heaviest at the usual markets, and therefore the Chicago receipts should be much larger than those of her rival. Most of the St. Louis wheat is carried by a new line of barges to New Orleans whence it is shipped to foreign markets. Since January 1, it is said twice as much wheat has been shipped to Europe by this route, as there was in the corresponding period last year.

For Women.

CONDUCTED BY MISS RAY CLARK.

THE CHANGE.

Out of the long white dresses
And into the dainty frocks,
Little blue shoes with buttons,
In the place of the worsted socks:
No longer a helpless baby,
Carried in arms all day,
But a restless, mischievous fellow,
Brimming with frolic and play.

Getting himself into troubles
That seemingly have no end,
Tearing "bid holes" in his dresses,
For patient mamma to mend!
Bumping his curly round noddle
Which mamma's soft kisses must cure;
And meeting a hundred misfortunes,
Which babies must learn to endure.

Too soon I shall lose my baby,
And do the best I can
To welcome the magical power
Which changes the boy to man!
Oh! that the years were slower
In rolling the months away,
And would that for many a season
My baby a child might stay!

I wonder how he is dearer,
As only a babe on my breast?
Or changed to this roguish fellow
Whose feet are never at rest!
Is a rosebud any the sweeter
Before 'tis a full-grown rose?
Ah! the love that is born with the baby
Must grow as the baby grows!

DESCRIPTION OF CUTS.

FIG. 391.—DRESS-SLEEVE.

The sleeve is of striped material; the puffings at the lower elbow and wrist are of plain material; this sleeve will be found very suitable for a velvet or velveteen dress, with the puffings in satin.

FIG. 391.

FIG. 392.

FIG. 392.—DRESS-SLEEVE.

The gauntlet is one of the newest sleeves for Winter dresses; the top of sleeve is quite plain; it must be made of two materials; in our model the top and cross folds are of woolen broche, the cuff of velvet or velveteen. The sleeve is tight to the waist and fastens with six buttons.

FIG. 393.—LADIES' CRAVAT.

The cravat is formed of stripes of Oriental pattern ribbon and stripes of black lace insertion; it is trimmed with black lace.

FIGS. 394, 395, 396, 397.—LETTERS: CROSS-STITCH.

The large initial letters are now very fashionable for marking household linen. To prevent the trouble of counting threads, canvas may be put over the linen and worked through, and the threads of the canvas drawn out when the work is finished.

REVELATIONS IN FURS.

No more appropriate time than the present could be selected to greet the reader with warmth. The expressions clothed in fur taking the form of wrappings, creates in thought the comfort to be gained

FIG. 393.

by possession of one or more articles. The reality, however, is what we wish to disclose.

For information received, we extend thanks to C. G. Gunther's Sons, 184 Fifth Ave., N. Y.

Sealskin continues unsurpassed in popularity, and is conceded the highest rank in the fur kingdom. It is the existing *mode* and a particular feature in the fashionable arena. Fashion has not dictated its use to be confined to the sacque or jacket, but has granted an extended license, the result of which shows cloaks large enough to almost entirely envelope the person; this beautiful fur is also revealed this season in the deep ulster.

In sealskin sacques the pile turns upward, this fact serves as a test for well-made garments.

The pieces usually comprising the sealskin set are the sacque or jacket, the muff and boa; it is in exceptional cases accompanied with the cap or hat; sometimes a cloak in some form is substituted for the sacque with the neck finished with a collar which obviates the necessity of a boa.

The sacque deviates slightly from the former make up, being somewhat more slender in shape, the change being affected by blocking in the centre of the back, making deeper curves in the under arm seams and the shoulders of the approved hight. They are made both single and double

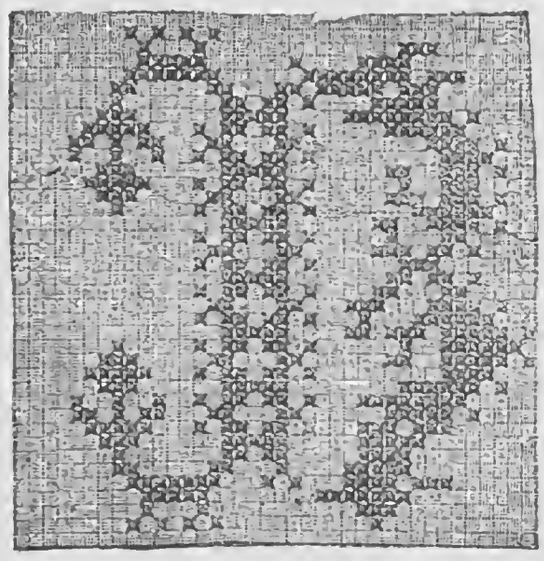

FIG. 394.

breasted, the preference being given to the former; a square collar and lapels opening in a shallow point at the throat. The fronts are slightly lapped and fastened with loops of cord set on the edge of the right side, over large cross-bars. The sleeves although fitting more closely than previously are not strained.

Furriers still advise the plain finish in sacques when first purchased, a bordering being held in reserve for renovation after a year or more of wear. The average depth is from 35 to 37 inches.

The cloaks are all trimmed and in models, are in a measure modifications of the dolman mantle cut deep and extending to within a few inches of the bottom of the skirt.

The "Medicis" is the dolman modified; it has deep mantle-shaped sleeves curving to the back. In sealskin or in silk with fur lining this style is extremely popular; the former are shown trimmed with black fox, Argentine fox, blue lynx and Arica chinchilla and are pictures of elegance.

The "Albani," the *Roi de Lahore*—a model of which is valued at $375—the Paletot and Pelisse—$400, being the value of one style of the latter two—are other forms introduced.

Fur-lined cloaks are still in great demand. Some of the materials used in making are Sicilienne, velvet brocade, *gros-grain* from Antwerp, and a new cross-barred, heavy silk fabric called *barre*. The squirrel is usually patronized in lining. A good circular may be bought for $70 or $80. Those in wool armure with a silk surface are useful and handsome, and when well lined, costs $75.

The popularity of sets will be revived, being worn more than for many previous Winters. The velvet and cloth cloaks will need this addition to insure completeness.

To a certain extent the collar and cape will supersede the boa. The small round collar, the medium large Eugenie collar cut off square across the front, yet long enough to cover the chest, and the large, stylish pelerine, covering the shoulders nearly to the waist like a coachman's cape are styles seen in new sets.

Muffs remain small. The round muff and those with a border of another kind of fur are the styles exhibited by the above furriers.

The black fox pelerines cost from $45 to $60; some in monkey-skin and black hare, the latter a thick lustrous fur, cost but $5 to $10, and a pretty muff to match may be obtained for from $4 to $6. The capes are of great service and will no doubt be greeted with applause by persons needing particular protection and yet wishing to avoid the weight of long cloaks.

Young ladies and misses favor the leopard sets. The pelerines cost $20; the smaller collars $7 to $15—the latter the most popular. Fawn-skins and chinchilla are other favorites.

In trimming, the black fox is the choice of elegance. This border for wraps costs from $7 a yard upward. The black hare is a thick, long, lustrous fleece; it is a pretty, low-priced trimming, costing $1.25 a yard.

Caps of seal-skin for ladies have large high crowns or are indented and have a turned-up band all round. The former is designated as the Hungarian, the latter as the Cossack. Birds, breast feathers and leopards' paws are used for trimmings.

From the many styles and prices of fur apparel, selections can be made to meet the demands and circumstances of the majority of would-be purchasers.

VANITY FAIR PAPERS.—NO. 1.

A New Material for Screens, Lambrequins, Grate Curtains.

While table scarfs, lambrequins and curtains are made of all grades and varieties of goods, usually, it is only the costliest fabrics that are employed as screen coverings. Plushes, silks, satins and velvets are regarded as necessities in screen decorations. These materials, rich though they be, are, however, eclipsed by the gold and silver cloth lately imported from France.

The gold cloth is made of gold thread and cardinal crewel. It is woven in such a way as to resemble a sheet of shimmering gold dashed with a suggestion of cardinal. The latter color intensifying the general effect of brilliancy.

The silver cloth is composed of interminglings of gold thread, silver thread and black silk. The effect is even more beautiful than that of the gold cloth. The yellow of the gold presents a sharp contrast to the white of the silver and the slight infusion of black serves to relieve it of the faintest suspicion of tawdryness.

These cloths are designed mainly for screens. They present too pronounced a background for the advantageous display of delicate embroideries so that applique designs are usually employed on them.

Two screens made of this material are shown: one of gold cloth with a Calla Lily and leaves appliqued in plush, with cardinal plush bordering. The other of silver cloth has a square of heliotrope satin in the center with a hand-painted design of a girl with a petticoat of pink and a robe in two shades of purple; the screen, which is framed with a border of heliotrope satin, is embellished with beautifully painted morning glories in pale pink and lilac.

Lambrequins.

Scallops are out of date and lambrequins, whether for mantel or window decoration, are made in Eastlake style. Many materials are used in their construction, and the greatest possible latitude is allowed individual taste in the matter of ornamentation.

There is a fancy just now for using sets of scenes from Mother Goose as designs on mantel lambrequins. A popular one represents six episodes in the life of Cinderella. The lambrequin, which is of old gold sateen is arranged in panels and the design is outlined in seal brown Japanese embroidered silk. The panels are separated by bands of crimson plush. A broad band of the same material, and a rich fringe in cardinal, old-gold, seal brown, Nile green and Watteau blue finish the edge.

"Puss in Boots" scenes are used on a lambrequin of Turkish satin in two shades of olive-green. The designs are filled in with bright colored crewels and filoselle. A heavy fringe of olive-green and cardinal chenille with a rich heading is placed at the edge.

Curtains or hangings for grates should show the same colors and materials as the mantel draperies. The rods and rings, too, should correspond with the metal used in furnishing the grate and its

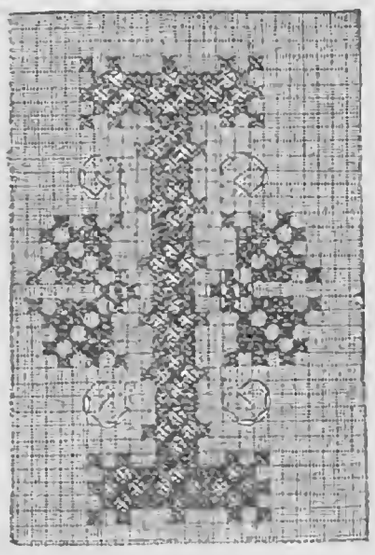

FIG. 395.

appliances. When drawn, the curtains are hung over an arm which should be of brass or of nickel plate.

FAITH RIPLEY.

FASHIONS.

Skirts are worn fuller than last year.

The Derby hat is very much worn again this Autumn.

Muffs are now made of velvet with a center of fur to match.

Plush hats are very fashionable.

Pale blues are very much worn in evening costumes.

Handkerchief crown hats are coming into favor.

Surah silk is much in use for bonnet strings.

Tassels of all kinds, including lace ones are fashionable.

Mull and lace fichus of every description remain ashionable.

Old fashioned neckerchiefs are very popular with the ladies.

Ribbon is not so much used for bonnet-strings as satin serge and soft crushable damassee silks.

Velvet fruits are used as trimmings for plush hats.

Easy simplicity is the characteristic of most coiffures.

Fashionable coiffures make the head look very small.

Ostrich feathers are lavishly used for bonnet trimmings.

Many evening bonnets are in white or cream plush, with pearl or crystal ornamentation.

Short sashes, very wide, and made of double material, are much used with plain round waists.

Crown braids and puffs are entirely out of date, the fashionable coiffure being very flat and smooth.

Cashmere-colored buttons and belt buckles are seen on the Oriental costumes so fashionable at present.

The newest flounces are shirred half their length and the lowest half is pressed to form plaits.

Prune or plum color, in dark shades is a favorite with middle aged and elderly ladies.

Basques of figured or brocaded fabrics, with skirts of plain goods, are very popular.

Polonaises, jackets, basques, overskirts, trimmed skirts and princess dresses are equally in favor.

Cords, both beaded and plain, will be largely used in trimming polonaises and outside wraps this fall.

Oriental textures and effects will be very fashionable this season.

Large hats and bonnets, as well as very small ones are much worn.

Plush bands are seen on the bottom of some plain skirts of satin or velvet brocade.

Black jet is used in fringes of every width, galloons, *passementeries*, *quilles*, cords, tassels, spikes, frogs, and buttons.

Large gilded hooks and eyes, little gilded pigs

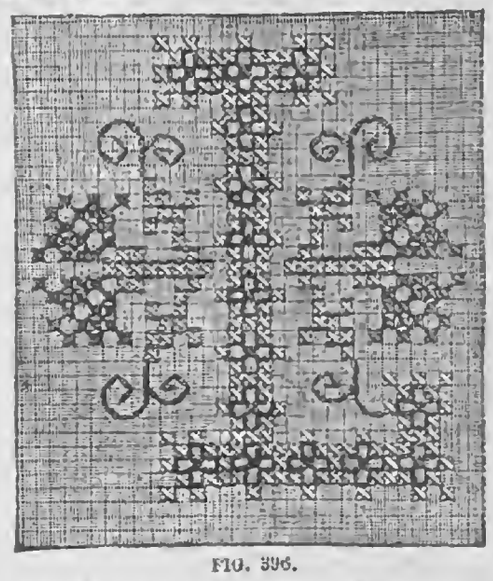

FIG. 396.

and elephants, gilded spiders, beetles, and insects, of various kinds are found among new bonnet ornaments.

ABOUT WOMEN.

Mrs. Langtry is now living in New Jersey.

Jenny Lind is fifty-nine years old, and the sweetest, kindest looking woman one sees in a year's travel.

The Empress of Germany is a very charitable lady. She supports a school and hospital in Berlin out of her private purse.

Miss Van, the American singer, who has achieved such distinction in Rome, is a Cincinnati girl. She is quite a handsome blonde, with golden hair, and is only twenty years old.

Isabella McCulloch, the divorced wife of Brignoli, died in New York the other day. Brignoli abandoned her in Europe, and about two years ago she applied for a divorce. Since then she has supported herself as a church singer.

Little Jeanne Hugo, the granddaughter of the poet, has received from Professor Nordenskjold the gift of a paper knife made from the tooth of a moose. On one side is this inscription: "Product of the hunt in the Polar Sea, offered to Mlle. Jeanne Hugo by A. E. Nordenskjold."

Carlotta.—The ex-Empress Carlotta has fortunately lost all memory of her Mexican experience, never making any allusion to it. The unhappy princess in the darkness of her mind still retains the habits of court etiquette, exacts all ceremonious adjuncts, even to a guard of honor, and always attires herself in a handsome costume for dinner. The only visitor whom she consents to see is Queen Marie Henriette, who shows a kindly devotion to the invalid which does her honor.

Miss Anna Louise Cary is having some new gowns made in Paris. Among them is a princess wrapper of light blue cashmere, finished around the lower edge in points trimmed with silver braid. Below the points is a knife plaiting covered with Valenciennes, and above them a quilling of the same lace. A purple morning dress, made with a skirt and half-fitting sack is also trimmed with silver braid, and is quite as pretty as the wrapper. A brown walking suit, a short dinner dress of two shades of blue, are among the other gowns which the singer is to have for herself, and not for the dear public, for which her finest garments are designed.—Cincinnati Gazette.

CORRESPONDENTS' CORNER.

Editor:—Will you please print in your paper

NATURE'S CHILDREN.

EVA EDGERTON.

Daisies and buttercups, milkweed and clover,
Ye are so beautiful all the world over,
I would not change you for exotics rare,
Breathing their life away in the soft air,
Ye are so humble, down by the glade
Where silver-tongued brooks ripple 'neath the cool shade,
Growing so beautiful in your seclusion,
Scattering blossoms in richest profusion,
On the steep hillside, over the ledges,
In the wild brambles and through the thick hedges,
Ye are so lavish with all of your treasures,
Covering the earth with such brimming measures;
Asking no recompense, seeking no praise,
Starring the meadows and dusty highways;
But, oh! do ye know, ye gold-hearted daisies
Each of you tell of life's saddest phases!
For, when the parting with loved ones is over,
Under the daises and under the clover,
Knowing you'll guard them with tenderest care
We lay our loved and lost, down 'neath you there,
Lay them to rest, until over the river
We meet, no more to part, never to sever.

INMATES OF LESTER HALL.

(Continued from page 774.)

CHAPTER XXI.

THE JOURNEY.

Mrs. Audley went away to spend the Christmas holidays with her relatives; Mattie wrote that she and her husband were to spend theirs at Cannes, "where the orange-flowers are blossoming under our windows;" and Cecil wrote to accept the two invitations she had selected, and to decline the others. Then there were a few days devoted to shopping and to interviews with dressmakers, for a three weeks' campaign in a fashionable country house is an important matter, and although Cecil was engaged, she had by no means retired from the field, and had as many victims as ever.

Just before the time fixed for the journey to Mrs. Brayburn's the weather broke up, and from being fine, clear and frosty, became wild, blustering and snowy. If the truth were known, Mr. Daton would far rather have seconded Ernest's proposal to spend Christmas quietly at home; but Cecil's will was law, and he found himself one snowy day in a comfortable first-class carriage, with Cecil wrapped to the chin in sealskin and sables, and Ernest in attendance, bound for one of the most charming places to visit, for Mrs. Brayburn made a most delightful hostess, and her husband seconded her admirably.

The journey was not a long one, and in the cushioned compartment, with every contrivance to keep out King Frost, there was not much inconvenience from cold.

Mr. Daton, with a most discerning idea of what would be expected of him under the circumstances, leaned back comfortably in his corner and fell fast asleep; while Cecil, wrapped in her furs, looked dreamily out of the window at the fair white world through which they were speeding, and forgot altogether the presence of her handsome, fair-haired lover, who, from his corner opposite, devoured the beautiful, wistful face of his lady-love with his eyes.

"Cecil," he said, at last, in a low tone, judiciously calculated not to disturb the obligingsleeper; but low as his voice was, the girl started and turned her eyes away from the snow-covered landscape with a nervous shudder. "Why, how you started, love," said he, smiling. "Were you asleep with your eyes open?"

"I really think I was," Cecil answered, a trifle pettishly. "Why did you speak to me, Ernest?"

"Probably because I had something to say," he replied, gaily. "Shall I say it now, Cecil, or shall I let you return to your slumbers?"

"It is as well to get it over," she answered, languidly.

"One would think you alluded to a visit to your dentist," he said, lightly. "I hope it is not so unpleasant as that, Cecil?"

"I hope not," was the rather ungracious rejoinder. "I am in a very bad temper as it is."

"Then perhaps I had better defer our conference," he said, gently. He was getting used to Cecil's pretty tyrannies, and had ceased to resent them, even if he ever had done so. "I may hope for a more favorable audience some other time."

"You shall have it now," she said, suddenly, turning to him with a smile, which made Ernest change his seat from one facing her to one beside her and take her hand in his.

"Thank you," he said, tenderly.

And Cecil exclaimed, with a little burst of remorse:

"How patient you are, Ernest! You make me ashamed of my ill-temper."

"Whoever heard of a rose without thorns?" he said, smiling.

"There are more thorns than leaves to this one," she said, laughingly. "Well, what is this important communication you wish to make?"

"I had a letter from my father this morning," said he, fondling the little gloved hand left in his, "and he fears, from the state of Ida's health—not to mention my mother's, which is almost equally delicate, that they will not return this next year at all."

"I am very sorry to hear your mother is so delicate," answered Cecil, kindly; "but I have no doubt that such a long stay in a warmer climate will benefit her greatly. Mr. Edgar writes that Mattie is quite strong, and I have no doubt that she will derive equal benefit."

"I hope so," said Ernest; and there was a short silence.

"Cecil," he asked then, with the red blood flushing his cheek, "when are you going to make me the happiest of men?"

Cecil started, and her eyes met his with a quick look of alarm; then hiding her emotion, she said, smiling;

"I thought you were the happiest of men."

"But I shall be happier when you are my own, Cecil," he said, eagerly. "When may I put another ring on this dear hand? Nay, my dearest, I did not mean to startle you. Is the idea such an alarming one, Cecil?"

"No—no," she said hurriedly, turning her face from him to hide the sudden pallor which had overspread it, "it is not that—but, Ernest—you—are very happy—we are very happy as we are.

"Why, Cecil, what do you mean? Do you not think you will be equally happy as my wife? Do you not think that I will do my best to make your life one cloudless sunshine?"

"I am sure you will," Cecil answered, looking distressed; "but Ernest, you must not hurry me. I do not want to be married yet. I cannot leave Uncle Henry so soon."

"Uncle Henry," repeated Ernest, "he would not wish to stand in the way of your happiness, Cecil."

"I know that," she said, petulantly; "but because he is so unselfish, is that any reason why I should be selfish? Think how good he has been to me. I will not leave him yet. We are both young enough to wait a little."

"Cecil," he said, with a sudden gravity, "what is this? I know that before we were engaged you told me you did not love me; but you said you were willing to be my wife. Have you changed your mind since then?"

"Changed my mind?" she said, with a little nervous laugh; "No, I have not changed my mind. I like you"—she turned to him with a very kindly light in her lustrous eyes—"I like you a thousand times better now than I did then. No, you need not go into raptures," she added, lightly. "How could I help liking you when you are so good to me? but, Ernest, you must give me time. You must let me get accustomed to the idea."

"But we have been engaged two months," remonstrated Ernest; "and my father is anxious that the marriage should take place soon, and hopes that we will go and pay them a visit."

"He is very kind, but," and Cecil turned quickly to him as she spoke with a pretty, imperative air of decision—"but it is quite out of the question that I should be married while Mattie is away. So that settles the matter!"

"How long is she to remain away?" said he, ruefully.

"They will not be home till the Spring."

"The Spring! When is the Spring, Cecil? Does that mean April, or May, or June?"

"It might mean March," she answered, lightly. "Shall we leave it an open question, Ernest?"

"No," said Ernest, firmly; and when a man shows firmness a woman generally gives way. "We will say a fortnight after their return."

"A fortnight—certainly not!" said Cecil. "A month if you like, but not a day sooner!"

"Well, be it so," said his lordship. "But I do not think you are kind to me, Cecil!"

"It is because I am kind to you," she answered, looking at him a little wistfully—"it is because I am kind to you that I do not want to let you be in such haste. I am not such a desirable possession after all! But," and Cecil started up with a look of intense relief, "here we are at our journey's end! How lovely all those frosted trees look! Uncle Henry, wake up; we are at our destination at last!"

CHAPTER XXII.

THE MEETING.

Mr. Brayburn had driven down himself to meet his guests, and was standing on the platform of the little country station. When the train stopped, he came forward eagerly to assist Cecil to alight.

"Here you are!" he said, cheerily. "Not quite frozen, I hope, Miss Lester. Mr. Daton, I am delighted to see you! That little wife of mine prophesied you would not come. Ernest, I knew that, under the circumstances, you would not fail me."

"Not likely!" said Mr. Eleston, gaily, while the servants collected wraps and dressing-cases, and Mr. Brayburn hurried Cecil to the carriage, which was waiting outside, with an omnibus for the servants and the baggage.

As they turned into the grounds belonging to the estate, Cecil broke into a little cry of delight at the beautiful white, fairy-like scene which lay before them. Trees, hedgerows, and grass were all covered with the glittering frost; the sun was setting in the west, and the red light was shining on the beautiful white world. Beyond rose, a fine old red brick mansion, stately and ivy-grown, and the last rays of the setting sun were gleaming on its many windows, giving it the appearance of a house on fire.

"How beautiful!" said Cecil, softly.

And Mr Brayburn looked delighted at the appreciation of his estate, and he bent over her kindly.

"Yes, it is a fine old place. But I have heard a great deal of the beauty of Lester Hall."

"It is a ruined beauty," she answered, half sadly. "Uncle Henry wishes to restore it, but I do not know. Perhaps—"

Mr. Brayburn's was a comparatively modern house, with large windows and every modern comfort; and the room into which Cecil was led, was a large square apartment, which looked very inviting and cosy after the long, cold journey. A blazing coal-fire was burning in the wide grate; huge fur rugs were scattered over the polished oak floor; wide low armchairs and a large round table, groaning with novels and all manner of light literature, stood near the fire; wonderful old cabinets, full of art-treasures, stood against the walls. The firelight threw a ruddy glow over the room, and over the pretty gipsy-table, with its dainty tea-service, which stood before the hearth—on Mrs. Brayburn's graceful figure, seated in a low chair beside it, and on a tall, broad-shouldered man, with a great tawny beard, who, standing with his elbow on the mantelpiece, was talking to her ladyship in a deep rich voice, which was the first sound which met Cecil's ears as she entered the hall.

Mrs. Brayburn, an extremely pretty and coquettish brunette, rose and fluttered across the hall to greet her guests. She was a French-woman, and had brought into her home all the graceful vivacity of charm of her country-women, with a little spice of coquetry, which made her all the more bewitching.

"Ah, Cecil, *ma belle!*" she said, gaily; "not quite frozen, I hope. No, I see you are not. What a lovely color! A journey on such a cold day agrees with you. Mr. Dayton, how good of you to come! Ernest, I will not thank you. I suppose you would have come even without an invitation."

"The temptation would have been a very great one," said he, who was no mean performer in the art of flirtation, "It is so long since I had the great pleasure which I enjoy now, that I was getting quite desperate."

"*Traiment!*" laughed her ladyship, with a glance at Cecil, who was removing some of her costly wrappings, and looking at them with a smile. "Cecil, you will have some tea? I think you all know Dr. Carewe?" she added, as she moved over to the table and began to manipulate the pretty cups and saucers.

Meanwhile Mr. Daton was greeting Lawrence Carewe—for the tall man was the doctor—with much warmth and cordiality; and, then Cecil, turning to him suddenly, but without a word, held out her hand with a little smile, in which there was an unspoken prayer. Lawrence Carewe hesitated for a moment—only a moment—and the hesitation was perceptible to no one but to Cecil herself; then he touched the little hand with his own lightly and coldly. The blood rushed into Cecil's face, then she turned very pale, and her hand, as he released it, fell heavily to her side; but she turned to Ernest with a sudden gesture of confiding affection.

"Ernest," she said, gently, "can you—will you ——"

Her voice failed her, but she smiled, and Ernest took her hand and pressed it fondly, as he asked her "if she were very tired?"

"Are you very tired, Cecil?" said Mrs. Brayburn. "I will give you some tea, or would you prefer to go to your room at once?"

"I think, if you will excuse me, I would like that best," Cecil answered; "I am very tired."

"You look so pale," said Mrs. Brayburn, anxiously. "Doctor, come and prescribe for Miss Lester."

"I am only tired, and Dr. Carewe could not prescribe anything better than rest and a cup of tea," said Cecil, hurriedly.

"I will take you up myself," said her ladyship, slipping her hand through Cecil's arm. "I will come back and give you some tea directly, Mr. Daton," she added, looking back with a smile as they passed up the broad stone staircase.

By-and-by Mrs. Brayburn returned and the guests came back from the lake where they had been skating. The girls were clustering round the fire, laughing and chatting, while the young men were handing cups of tea, and maccaroons and cake.

Ernest was in deep conversation with a beautiful blonde, Violet Heriot, with eyes as blue as the flower after which she was called. He was looking very handsome, and the doctor, as he watched him, thought that he was a man likely to take any woman's fancy, so tall and straight, with his frank, smiling blue eyes and his Greek features. Involuntarily, Dr. Carewe glanced over at his own image, and met the questioning glance of his own stern gray eyes, which were examining his rugged features in the glass. He turned away with an impatient sigh; but as he did so, he met another glance from a pair of hazel eyes, belonging to a pretty fairy of seventeen, who was not yet "out," but who had been permitted to join the Christmas party at her aunt's, and who was an especial favorite with Lawrence Carewe. She was looking pale, he thought, and there was a sorrowful look in her eyes which touched him, and he crossed over to her side.

"What is the matter with you, Miss Tyrrel?" he said, smiling. "Are you very tired, or has anything vexed you?"

"I think I am tired," she said, a little sadly. "Dr. Carewe," she added, "can you tell me—has Miss Lester come? I am so anxious to see her."

"Yes, she arrived this afternoon," he answered, gently. "Why are you so anxious to see her?"

"Is she so beautiful?" said Lotile Tyrrel, eagerly.

"She is very beautiful," he replied, gravely, angry with himself for the tremble in his voice as he spoke, but in some surprise at the girl's eager face and wistful eyes. "That is Mr. Ernest Eleston talking to Miss Heriot."

"I know; I have known him a long time," the child said. "But he has not seen me. Do you think he cares for her very much?"—To be continued.

NEW PUBLICATIONS.

The Eden Tableau or Bible Object-Teaching—A study by Rev. Charles Beecher. Boston: Lee & Shephard. Cloth 12 mo. Price $1.50.

We submit the following extract from a letter received by the publishers concerning this book:

"Just at this time of thought, there are some reasons why 'The Eden Tableau' should be taken notice of.

"1st. The existing schemes of Theology are based on the doctrine of the fall of Adam. This is true of Catholic, Greek and Prostestant schemes. They are as much built on that doctrine as a house is built on its foundation, whether of rock or sand.

"2nd. Science by its developments claims to have demolished that doctrine until there is not a vestige left. Eminent orthodox leaders, in whom great confidence for their learning and piety is placed, it is understood, admit that Adam and Eve were not historic realities but that the whole was as a parable.

"3rd. These things are fermenting and coming towards an explosion, perhaps at the next Triennial Congregational Council that will bring on a new discussion of the whole subject, especially, the question of the Fall of Adam.

"The Churches cannot stave it off—they must define their position!

"This book of Rev. Charles Beecher is in order—it is *apropos*. For it offers a possible compromise between extremes, and is perfectly original and unhackneyed, being the first time in Church history that an attempt has been made to apply the law of analogy consistently to the explanation of the Eden Emblems; therefore, it is a book that should excite interest, and is in the line of present thought.

The Danbury Boom. By James M. Bailey, "The Danbury News Man." Boston: Lee and Shepard. Price, cloth, $1; paper, 50.

This is the title of the genial New England Humorist's fourth volume, which opens with a timely bit of political "booming." In addition to the "Boom" we have a great variety of spicy effusions, having brevity, and, therefore, of course, the soul of wit, of decided humor, and dealing with the perplexities of human nature in an original way. Much fun and no little wisdom is to be found in this book, especially if the advice given by the author in his preface is followed.

"There is no plot to this book, and, consequently, there is no need of hasteuing through its pages to see how things are going to turn out. Take plenty of time to read it. Go through it leisurely and get the whole benefit of the novel, but don't attempt to take in the whole of it at once; don't dare to read long at it. 'It is not a free hand.'"

MAGAZINES FOR NOVEMBER.

The American Antiquarian.—Contents:—The Emblematic Mounds, and the Totem system of the Indian Tribes; Relics of Aboriginal Art and their Ethnological Value; Ancient Quartz Workers; The Rabbit and the Grasshoppers; An Otoe Myth; On the Alabaster Quarries and Flint Works found in Wyandot Cave; Aboriginal use of Copper in War and Peace; The Oriental Department.—Evolution; Correspondence; Editorial Notes; Gleanings from Magazines; Book Reviews.

The Idol Montezuma.—Montezuma is still the great Divinity of the Pueblos. His image is preserved and worshipped by the surviving tribes. As late as in 1857, Mr. W. Davis, then United States Attorney for New Mexico, was shown this idol, which he describes as follows:

"It resembles nothing upon the earth, in the heavens above, or in the sea beneath. It is a cylinder shape, nine inches high and nine in diameter, and made of tanned skin. The upper end is closed with skin and the lower end left open. One-half of the cylinder is painted green and the other half red. Upon the green side is fashioned the rude resemblance of a man's face. Two long apertures in the skin, in the shape of right-angled triangles, with the bases inward, are the eyes. There is no nose. A circular piece of leather about two inches below the eyes represents the mouth. Two similar pieces, one on each side, opposite the outer corners of the eyes, are intended for the ears. A small tuft of leather and feathers crowns the top.

"The three Indians present," he continued, "looked upon it with the greatest veneration. They knelt around it in the most devout manner, and went through the form of prayer, while one of their number sprinkled upon it a white powder."—American Antiquarian.

Scribner's Monthly.—Contents: The Sower. After the painting by Jean-Francois Millet; Peter the Great as Ruler and Reformer I; Bordentown and the Bonapartes; "O Silver River Flowing to The Sea;" Walt Whitman, with portrait; The Secret of Second-sight, by an ex-conjuror; Two Singers: Tiger-Lily, in Three Parts—Part I; The Thought of Astyanax Beside Iulus; Zerviah Hope; The Lost Hellas; A Chapter on Tableaux; Jean-Francois Millet—Peasant and Painter, III; "O Tell me not of Heavenly Halls;" Elihu Vedder; On Two Pictures by Vedder: I. The Young Martyrs. II. The Cumæn Sibyl; Mr. Gladstone, with portrait from a photograph (by permission of Marion & Co.); St. Martin's Summer; Leonard Woods; Artemus Ward; "Pray You, Love, Remember;" Topics of the Time; Home and Society; Culture and Progress; The World's Work; Bric-a-Brac.

The present number of Scribner's is presented in a new dress, and contains many fine illustrations, together with its usual good selections of literary matter.

A GLANCE BACK ONE HUNDRED YEARS

One hundred years ago not a pound of coal nor a cubic foot of illuminating gas had been burnt in the country. No iron stoves were used and no contrivances for economizing heat were employed until Dr. Franklin invented the iron-framed fireplace, which still bears his name. All the cooking and warming in town, as well as in the country, was done by the aid of a fire kindler on the brick hearth or in the brick ovens. Pine knots or tallow candles furnished the light for the long winter nights and sanded floors supplied the place of rugs and carpets. The water used for household purposes was drawn from deep wells with creaking sweeps. No form of pump was used in this country, so far as we can learn, until after the commencement of the present century. There were no friction matches in those days, by the aid of which a fire could be easily kindled, and if the fire went out upon the hearth over night and the tinder was damp, so that the spark would not catch, the alternative remained of wading through the snow a mile or so to borrow a brand of a neighbor. Only one room in any house was warm, unless some member of the family was ill; in all the rest the temperature was at zero during many nights

In the winter. The men and women of one hundred years ago went to their beds in a temperature colder than that of our barns and woodsheds, and they never complained.

BRIC-A-BRAC.

THE DIVINE AND GAUZY SARAH.

What is this Sarah slim,
This sublimation dim,
That fills the papers?
Is it imaginative,
Some thought creative,
Or just a mingling of the misty vapors?

Perhaps a bit of fog
From o'er the ocean,
Borne by the winds and tide?
Or a mere notion,
A gaseous fancy, Frenchy, too,
Or just a bit of 'vaporated dew.

Ether materialized,
Varnished and sized,
A fluid that will volatilize:
But we sadly mistrust
'Tis a bit of French dust,
Blown into American eyes.

"You goin' to the State Fair this year?" inquired one boot black of another, as they met at the post-office yesterday."

"Course. You goin'?"

"Course."

There was a silence of half a minute, during which they looked each other over. Then the first one asked:

"Do you sneak in with a family or climb the fence?"

"I sneak. How do you do?"

"I climb."

There was another interval of silence, and then the little one observed:

"But there need't be no hard feelin's between us."

"Oh, no, no," replied the other; "all we differ on is the minor particklers. We is just as solid as wheat on the main question. You won't give me away to the purleeee?"

"Naw! And you?"

"I never squeals!"

They shook on it and borrowed a match to light a cigar-stub and smoke in partnership.—Detroit Free Press.

CHANGED SOME.

A HUNGARIAN entered the studio of a portrait painter and said:

"I want you to paint a portrait of my late father,"

"With pleasure, sir. Have you a photograph of the lamented deceased?"

"No; but you don't want any photograph. Just paint a wild-looking Hungarian, between sixty years old and six feet high, with a big white moustache."

Four weeks later the family came round to see the picture.

"Bravo," says the Hungarian, warmly; "it's a speaking likeness, only the old gent seems to have changed a good deal since his death."

A GENTLEMAN had a board put upon a part of his land, on which was written, "I will give this field to any one who is really contented." And when an applicant came, he asked, "Are you contented?" The general answer was, "I am." And his reply invariably was, "Then what do you want with my field?"

THE owner of a pair of bright eyes says the prettiest compliment she ever received came from a child of four years. The little fellow, after looking intently at her eyes, a moment, inquired naively, "Are your eyes new ones?"

"HAVE you given electricity a trial for your complaint, madam?" asked the minister, as he took tea with the old lady. "Electricity!" said she. "Well, yes, I reckon I has. I was struck by lightning last summer and hove out of the window, but it didn't seem to do me no sort of good."

IT was a talkative Englishman who was bragging of what superior things they had in the "hold country" to everything here, and it was a serious-faced Yankee who said: "Well, I will allow there is one thing in England better than we find here—there is a better class of Englishmen there." It took the Englishman half a day to discover that the remark didn't convey a personal compliment.

SPLITTING THE DIFFERENCE.

A YOUNG man with the blush of country life on his cheeks sold out his produce on the market yesterday and entered a shoe store and said he wanted a pair of shoes for his wife.

"What number?" asked the clerk.

The young husband scratched his head, looked very much embarrassed, and finally said:

"Well, I've been married eight months, but this shoe business stumps me. I don't hardly believe she wears 'levens, and I don't think she can git into fives. I guess if we split the difference we'll hit her pretty close."

He was given a pair of eights, and after squinting along the soles he observed:

"I guess them'll do. She's awful proud, and I know she'll squeeze into 'em for all she's worth."—Detroit Free Press.

A POOR old deaf man resided in Fife, and was visited by the new minister shortly after his coming to the pulpit. The minister said he would often call and see him, but time went on, and he did not visit him until two years after, when, happening to go through the street where the deaf man was living, he saw his wife at the door, and therefore could do no other than inquire for her husband. "Well, Margaret, how is Tammas?" "None the better o' you," was the curt reply. "How! how! Margaret?" inquired the minister. "Oh, ye promised twa years syne to ca' and pray once a fortnight wi' him, and hae ne'er darkened the door sin' syne." "Well, well, Margaret, don't be so short. I thought it was not very necessary to call and pray with Tammas, for he is sae deaf ye ken he cannot hear me." But, sir, said the woman; with a rising dignity of manner, "the Lord 's nae deaf." And it is to be supposed the minister felt the power of her reproach.—Leisure Hour.

Sour stomach, bad breath, indigestion and headache easily cured by Hop Bitters.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

ONE WEEK FROM MRS. CLAY'S JOURNAL.

ANNIE L. JACK.

IT is Saturday afternoon and we have been busy with housework; Janet and I, busy with our preparations for the Sabbath day, and we've hardly had time to breathe. I do not know what I should do without Janet; she is at once my "help," as people call it, and my friend. I never pay her wages, but leave a little note in her room every month inclosing the amount agreed on, and it pleases me to add always some tiny gift, to show that I am grateful to her for her honest work and faithful heart. It is five years since she came to us fresh from bonnie Scotland and I have been thankful ever since that Lawrence was inspired to go down to the steamer when it landed her in the nearest city, and secure her help for me. She is so fond of the children, too, especially of little Alex, who has been born since she came here, and even Nora, who does not make many friends, and was a shy, reserved girl, soon became as fond of Janet as of an elder sister. For we all live together in a low-browed cottage that belonged to Lawrence Clay when we were married, and here I brought my baby sister, Nora, to whom I have been a father, and mother and sister, all in one, since she was three weeks old. She is sixteen now, and has developed into a tall, stately girl, who seldom smiles, but has a sweet, winning manner and a voice of rich, full tone, that always commands attention even from strangers.

Our four children are of course perfection in their fond mother's eyes. Lonsdale, the eldest, is fourteen; then the two girls, Celia and Karen, aged nine and eleven; and lastly, baby Alex, who repudiates the name. Quite a large family I think to myself this Saturday afternoon, as everything gets into place, the children come from their bath rosy and clean, and we prepare for tea. Karen goes into the parlor to practice and is going over the first part of "Silvery Waves," very trying to my rather acute musical ear, and Lonsdale has made his way up stairs and is trying to make music sound from an old violin. How tired I feel! It seems to me that nothing would be so bad as this "over and over again." I think of the coming day and mentally repeat, Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, and on again through the routine. It is breakfast and dishes; dinner and dishes; supper and dishes, till one is fairly sick of the same cups and saucers and plates, and would fain have them broken now and then just for the sake of making a purchase of a new pattern. I know all about the cost, but these moments will come in every woman's life. In this, as in other things, it is rusting that *tells* most, and is hardest to endure. And this is one of the days on which I feel so rusty that the hinges of my very soul seem to creak. Of course Janet washes the dishes. But then she is a woman, too, and I know how she feels for all her sturdy independence and power of sticking to the work through thick and thin.

A man's work is so different from ours. It is varied by the seasons and by circumstances, and very few things are a steady job for 365 days. Then they have voting and elections of all sorts of officers, and school meetings, and fifty other ways besides of getting a little out in the world. But we seem to have nothing. If we go out to tea, we are at once set down as gossips, and all the household gets demoralized by our absence. And so a great many women in country places get a chronic habit of staying at home, saving and scraping to add to the bank account, and degenerating into cooking and mending machines, until the rusty wheels stop some day, and each family finds they can do without her to whom they never before gave a thought of rest, or else— But I will only quote the newspaper statistics, which say there are more farmers' wives go mad than those of any other class. And while my tired heart is thinking of these things, Janet is crooning a song to little Alex., who is tired, too, and has cuddled himself in her sheltering arms; and this is what she sings:—

"It's a bonnie, bonnie warl'
That we're living in the noo,
An' sunny is the lan'
We often traivel throo';
But in vain we look for something
To which our hearts can cling,
For its beauty is as naething
To the palace o' the king."

And so the Saturday settles with a glowing sunset into the promise of a glorious Sabbath.

DOMESTIC RECIPES.

To Prepare Hulled Corn.

TAKE about three quarts of wood ashes, put into a large kettle and pour over six quarts of cold water. Let come to the boiling point and boil five minutes, skimming several times. Take from the fire and pour in a little cold water to help settle it. Put three quarts of shelled corn into another kettle and pour over the strained lye. Now let boil half an hour, then skim out the corn and rinse well with several waters, rubbing with the hands until the black chits come off. Put back into the kettle with clear water and boil until soft. Salt and eat with milk, or butter, pepper and salt.

Mutton Hams.

Allow one-quarter of a pound of saltpeter to half a pound of brown sugar. Put into an oven to heat and while hot rub thoroughly into the legs of mutton. In the morning rub well with common salt. Place something under the mutton to raise it from the drippings. Let stand three or four days, then give another *thorough* rubbing with salt and after a week hang up to dry. You may smoke them if you please. When dry, keep in canvas bags.

Apple and Bread Pudding.

Put a layer of apple sauce in the bottom of a pudding-dish, then a layer of bread crumbs, sprinkle with sugar and little bits of butter. Another layer of apples and a second layer of bread crumbs are added with sugar and butter and a cup of rich milk to wet the top layer of crumbs. Bake in a good oven three-quarters of an hour. Eat with sweetened cream. Flavor with nutmeg. FARMER'S WIFE.

Thanksgiving Pudding.

Fifteen Boston crackers, one quart of rich milk, nine eggs, half a teacupful of butter, one-fourth pound suet, one-half cup of molasses, one pound of raisins, one pound of currants, a little mace, cinnamon and salt. Scald the milk and pour over the pounded crackers the night before making. The eggs should be beaten separately and the whites added last, the currants first washed then dried and the raisins rolled in flour. Boil in a tin pail or mold three or four hours, the longer the better. Eat with rich sauce. MRS. J. B.

Curing Hams.

I have used the following for a long time for my hams and think it preferable to putting the hams into brine, for I think brine has a tendency to make lean meat hard and tasteless. For a common-sized ham take one ounce saltpeter and enough fine salt to rub the ham twice. After rubbing the hams thoroughly lay them in a cask with a hole in the bottom, or anywhere so that the brine may run off. After one week, take up and rub on remainder of salt and saltpeter. After a week or ten days longer, take up and rub over with salt alone. After another week they are ready to smoke. L. E.

Bread from Grown Wheat.

Scald the flour when making sponge and let cool before adding yeast. Knead the dough a little stiffer than for good flour.

Salve for Frost Bites.

Six ounces of mutton tallow, six ounces of lard, one ounce of peroxyd of iron—red iron rust—one ounce of Venice turpentine, one-half ounce of oil of bergamot, one-half ounce of bole Armenian rubbed to a paste with good sweet oil. Heat the mutton tallow and iron rust in an iron vessel, stirring constantly with an iron spoon, until the mass becomes perfectly black, then add the other ingredients, stirring until well mixed. Apply upon linen daily.

MRS. D. B.

Roasting Chestnuts.

Cut a small piece off from each shell—just enough to show the meat—and put a cupful into a corn-popper. Shake over a clear fire until they become mealy.

Lemon Bread Pudding.

One pint of fine bread crumbs, yelks of four eggs, one quart of rich milk, two tablespoonfuls of melted butter and one cup of sugar. Flavor with lemon. Cover and bake about one-half hour. Beat the four whites to a stiff froth, mix with it a teacupful of powdered sugar and the juice of a lemon. Spread over the pudding and return until slightly tinged.

MARY B.

Hard Soap Made with Washing Soda.

Pour five gallons of boiling water over six pounds of washing soda and three pounds of unslaked lime. After it settles and becomes clear, pour off. You may then turn over it two gallons of clear cold water to be added from time to time as the soap is in danger of boiling over. To the five gallons of soda and lime-water add six pounds of perfectly clean fat and boil about two and a half hours, or until it begins to harden. Throw in a handful of salt just before taking from the fire. Pour into a tub and let stand until solid. M.

Study Hop Bitters Book, use the medicine, and you will be wise, healthy and happy.

Miscellaneous.

THE request often made by publishers that readers will mention their journals when answering advertisements, seems to us a very reasonable one. Such mention is a helpful and friendly act to the journal mentioned and enables the advertiser to determine which journals are the best advertising mediums. Reference to our advertising columns will show there is not one advertisement of an exceptional or ambiguous character admitted. In so far as this is possible we hold ourselves responsible for their high-standing and trustworthiness.

News of the Week.

HOME NEWS.

MONDAY, NOV. 22, 1880.

THE committee on a site for the World's Fair to be held in New York in 1883, has recommended a portion of Central Park for that purpose, and there is probability of a serious opposition to the decision before the selection is confirmed by the city authorities.....A cold snap, starting at the Rocky mountains on the 6th and 7th with the thermometer at zero, traveled across the country, reaching the Atlantic on the 19th.....A dispatch from Des Moines, Iowa, says the jury in the case of Henry Osborne, charged with the murder of his wife, on February 18 last, brought in a verdict of guilty of murder in the first degree, and fixed the penalty at imprisonment for life. The jury at first stood eight for hanging to four against, and after a contest of 24 hours agreed on the verdict Osborne had separated from his wife several months before, and meeting her on the streets that evening seized a large stone, followed and knocked her down and crushed her head with the stone, two little boys witnessing the deed.... ....The Mississippi Valley Inter-State River Improvement Convention, at New Orleans, adopted resolutions approving the report of the Mississippi River Commission and requesting Senators and members of Congress from the States included in the Mississippi Valley to use their best efforts to secure the passage of the bill on the subject brought before Congress, recognizing the improvement of tributary streams as second only in importance to the Mississippi stream, and claiming that it is the duty and interest of the Government to establish a general system of river improvement, embracing the whole system of rivers in the valley of the Mississippi.

Gen. Nelson A. Miles, Colonel of the Fifth United States Infantry, has been appointed to succeed the late Gen Myer as Chief Signal Officer of the Army. .....The conviction of Moett, the Taghkanick, N. Y., wife murderer, has been affirmed, and he will be re-sentenced at the January term to be hanged.....William J. Martin, a murderer, under sentence of death, confined in jail at Lebanon, Mo., has been released by the sheriff's niece, a girl 15 years old, with whom he has eloped. The girl has been the prisoner's principal custodian of late. It took place some time during the day, as everything was all right when the sheriff was called away on business in the morning. The guilty pair have been traced to a point on the Tuscambia road, a few miles distant. It is not thought probable that Martin will be captured alive, as he is a desperate character and is armed with a Spencer rifle, which he took from the jail.

Two hundred and twenty-six street lamps at Providence, R. I, which extend over a distance of nine miles, are now extinguished by electricity in fifteen seconds by one man .....Good waterproof varnish may be made by dissolving one ounce of India rubber to a jelly in one pint of turpentine; then add one pint of linseed oil and mix over a slow fire.....Aiken & McLaren's Wynantskill knitting mill, at Westsand Lake, N Y., was consumed by an incendiary fire. Loss, $35,000; insurance, $16,000.....The passenger depot of the New Orleans, St. Louis and Chicago Railroad, at New Orleans, was burned, with two coaches. The loss is $30,000.

A statement is made showing the expenditures on account of the war of the rebellion chargeable to appropriations on the books of the office of the Second Auditor of the Treasury. The amount disbursed on account of said war up to June 20, 1879, was $1,558,138,343.88.....The Narragansett Hotel, at Providence, R. I., was sold at auction to a representative of the bondholders for $320,000..... Harry Richards, engineer of the American rice mill, on Fulton street, New Orleans, was caught in the machinery and crushed to death.....The Vermont Senate has refused a third reading, by a vote of 17 to 12, to the bill reducing the number of Supreme Court Judges from seven to six..... On November 1, 1880, the estimated amount of gold and silver coin and bullion in the United States was as follows: Gold, $154,012,030; silver, $138,271,327. Total gold and silver, $612,283,357.....Frederick Hunt and Stillman Williams were sentenced at Chicago, by Judge Blodgett, to two years each in the penitentiary for forging army discharges with the intent to draw soldiers' pay.....The Canada Pacific Railroad syndicate are about to establish at Montreal an immigration bureau similar to that in New York, for Canada, in view of the large immigration expected next year to the Northwest.....In the Superior Court at Chicago, before Judge Smith, judgment was entered in favor of Mary White, for $3,000 damages sustained from the explosion of a soda-water fountain in Kranz's candy store, by which the plaintiff was badly burned and laid up in her house for several months.

The Dominion line steamer Montreal, for Liverpool, went to sea on the 16th through the jetties with the largest cargo ever taken from New Orleans, consisting of 6,669 bales of cotton, 42,658 bushels of corn and 2,000 packages of miscellaneous cargo, the total being equivalent in bulk to 9,565 bales of cotton.....A fire in a grocery store at the corner of Government and Royal streets, Mobile, Ala., totally destroyed the large brick building. The inmates barely escaped with their lives, some having to pass down the escape ladder. The Signal Service Office records and instruments were all destroyed. Loss estimated at $30,000, nearly all covered by insurance..... The Goshen Manufacturing Company's building at Goshen, Ind., took fire on the 16th, and the fire soon communicated to the saw mill of Albright & Davis, the business house of Harris & Co., the business blocks of Mrs. Henry Hall, the tenement house of James Dougherty, six stables and a number of warehouses. Loss, $40,000 to $50,000. The insurance is divided between six companies..... The cases of Judge Coles, late County Judge of Pittsylvania county; Judge Bouldin, of Charlotte county, and other Virginia County Judges indicted for not putting negroes on their juries, came up lately in the United States District Court, Judge Alexander Rives presiding, now in session at Danville, Va., and the Court directed a nolle prosequi to be entered in each case. The announcement of the Court's order was received with surprise and applause.

The official list of the missing and dead among the recent inmates of the burned insane asylum at St. Peter's, Minn., contains the names of 27 persons. Eleven are said to be probably burned. They were demented and sick patients, incapable of making any efforts to save themselves. Thirteen are marked "missing," and many of these are believed to be safe. Three died after being rescued from the burning building.....A snake story is told of Mr. John Skell, of Hickory township, Lawrence County, Pa., who came across a large black snake in a thicket. Unable to remove his eye from that of the snake he soon fell to the ground unconscious. Skell's son, who had gone in pursuit of his father, found him prone upon the ground with the snake coiled about his body. He made a noise, when the snake raised his head, and the young man shot him dead. The old gentleman was brought to his senses with considerable difficulty, and it is feared that he has received a shock from which he cannot survive.

The advantage to the public of a rigid and honest inspection of food articles is shown in Boston where the Board of Health reports that its chemist is now unable to find any adulteration worth mentioning in any of the specimens of flour, sugar and groceries examined. Two years ago adulterations were the rule in the samples examined, and the Board waged a stern and relentless war on the dealers..... The Japanese make a bird-lime which not only snares birds but which catches and holds animals as large as monkeys. Dr. Palmer, in the Louisville Medical News, expresses the belief that a remedy for the opium habit is to be found in cocoa.....Old wall paper can be very much improved in appearance by simply rubbing it well with a flannel cloth dipped in oatmeal.... ....The remarkable feat of reconstructing the railroad suspension bridge at Niagara Falls has just been completed without interruption to traffic.....There is now in the museum in the city of Mexico a remarkable sword made from an aerolite or meteor that fell in the State of Durango, Mexico. .....To preserve leather hose, belting etc., in good condition, freely apply crude castor oil, warmed if possible.....Another marvel recently brought to light in the Yellowstone Park is nothing less than a mountain of volcanic glass.

The output of coal from Ohio mines for the year ending December 31 will reach if not exceed 7,000,000 tons.....The steamer Oceanic, which sailed from San Francisco for Hong Kong on the 18th, carried out 850 Chinamen.....Milwaukee merchants formally dedicated their new and commodious Chamber of Commerce building on the 18th. .....Sitting Bull and his braves are said to be having a successful buffalo hunt between Milk and Missouri Rivers, a short distance south of Wood Mountain, on the international frontier..... Three small children of Hyatt Hutton died at Wilmington, Del. It was thought that death was caused by scarlet fever, but subsequent investigation goes to show that accidental poisoning was the probable cause. This idea is advanced by the attending physician, and in proof of it it is stated that shortly before the children were taken sick they ate uncooked sweet potatoes, on the vines of which in raising Paris-green had been sprinkled to drive away the potato beetle.

The body of a French-Canadian boy named Truro, who mysteriously disappeared from Great Falls, N. H., has been found in a well. A post-mortem examination showed that the boy was killed before the body was thrown into the well. .... It was decided by President Hayes, in the case of the Hirth murderers at Washington, that Bedford and Queenan should be hanged on Friday, 19th instant, and that the sentence of Sandy Pinn should be commuted to imprisonment for life in the Albany Penitentiary.....Among the prisoners arraigned for intoxication at the Toombs, at New York, was Patrick A. Gallagher, one of the survivors of the Custer massacre. His residence was given as Deadwood, Dakota. In consideration of his antecedents Justice Patterson committed him temporarily.....President Hayes has appointed Charles W. Slaig, of Fairfield, Iowa; Otis P. G. Clark, of Newport, R. I., and A. B. Nichols, of Philadelphia, commissioners to examine and report upon fifty miles of railroad constructed by the Northern Pacific railroad company west of the Missouri River.

A horrible tragedy became known at Batesville, Ohio, on the 8th. Frank M. Bledenbaugh, a young and wealthy German, who three years ago married the daughter of a neighboring farmer, came home late on Saturday night, Nov. 6th, and, entering the room where his wife and child were sleeping, assaulted them with an axe. His wife's skull was crushed by a single blow, and then he cut his son's throat with the edge of the axe. He then went to the room where Mrs. Stephens, a visitor, and her child and servant were sleeping, and killed Mrs. Stephens and her child. The servant girl was awakened and sprang toward the door, but was knocked senseless and left for dead. Upon recovering consciousness she gave the alarm, and the neighbors came to the house. It was not till morning that the murderer was found in the tobacco house with his throat cut. He is not fatally injured. Jealousy, drunkenness and insanity are supposed to have led to the commission of the horrible crime.

Russell Dart, a prominent citizen, shot, probably fatally, Emil Seifert, a music teacher and violinist, at Buffalo, N. Y., on the 10th. Seifert made love to Mr. Dart's daughter, while acting as her teacher, and had been forbidden the house. On the 9th he visited the house and, producing a carving knife, threatened to kill any one who prevented him from seeing Miss Dart. He was ejected, and promised not to return. At 7 o'clock he returned and was shot by Mr. Dart, who was arrested and asserted that he acted in self-defence..... At Buffalo, N. Y., Linnie Bryans, aged 20, snapped what she thought was an unloaded pistol at James Kelly, aged 18, and killed him.....Collector Sinclair, at Galveston, Texas, telegraphs that the notorious moonshiner, Hut. A. Marine, who, charged with the murder of Deputy Marshal Cooper, broke jail, has been arrested in Texas and will be sent to Knoxville, Tenn., for trial..... The people of Kansas have adopted the constitutional amendment prohibiting the manufacture and sale of liquors in the State, by an estimated majority of 20,000.

The Pittsburgh, Pa., Iron Works were burned on the 18th. Loss, $35,000.....Another great railroad organization is foreshadowed in the decision in the Missouri, Kansas and Texas R R. case by Justice Miller as Judge of the United States Circuit Court for Kansas, placing that property in the hands of Jay Gould and his syndicate. There will be a special meeting of the stockholders of the company at Parsons, Kan, when the scheme of a great railroad consolidation, of which the Missouri, Kansas and Texas forms a part, will be presented to them. This scheme is in outline as follows: The Union Pacific and Central Pacific, the Texas Pacific, Missouri Pacific and the Southern Pacific of California are to be consolidated with the Wabash system, and General Grant has been invited to accept the Presidency of the vast aggregation of railroad interests which practically monopolizes the carrying traffic of the country west of the Mississippi. Then the system is to be extended to City of Mexico.

[Fond du Lac Commonwealth.]

Mr. S. Clark, one of Fond du Lac's oldest citizens, states: I have used St. Jacobs Oil and am well satisfied that it is a splendid article to relieve pain, and that very quickly.

FOREIGN.

IN Ireland affairs are becoming decidedly more warlike. The peasants are reported to be arming and secretly drilling all over Leinster, Munster and Connaught, but especially in Munster. The Protestants of Ulster are also excited; but it is against their Catholic countrymen. There is no doubt but the leaders of the Land League could cause an armed outbreak at any moment, but their policy seems wiser—to keep the country agitated and thus depreciate the value of landed property with a view to forcing the government to buy it for the peasantry, who might pay for it by installments. "Boycotting" is a new word produced by the agitation. Captain Boycott is an agent for Lord Erne's estates at Lough Mask, near Ballinrobe. He is a good Orangeman and an arbitrary agent. The tenantry feeling greatly aggrieved by his temper and conduct, refused to pay him rent, to gather his crops or to sell him anything. By the Land League's order no one was to work for him, so that he was perfectly isolated. To save the crops a lot of friendly Orangemen collected in the north, whence they went to Dublin, and thence, guarded by 2,000 troops, repaired to Lough Mask to gather Boycott's crops. They have been there on a sort of pic-nic for upwards of a week. The crops were worth about $2,500; already the expense to the government has been at least $25,000, while the volunteer helpers have also spent a good deal, and, worse still, the crops have been badly gathered, while the injury done to the house, woods, fences, etc., etc., by the encamped troops has been several times as great as the value of the crops. It was expected that the "relieving" force would be attacked; but the Land League seems content to hold them in dread of such an event, and to make them ridiculous. The tenants on the place offer to pay full rent to Lord Erne, but they will have nothing to do with Boycott, who has fled for safety to London. The Land League has now decreed that thirteen other obnoxious landlords shall straightway be "Boycotted."

The Liberal English papers are nearly unanimous in favor of a change in the land laws of Ireland in the interest of the tenants and against coercive measures, while the Conservative press insists that before any concessions are made, order must be restored. At present there is no immediate prospect of any unusual exercise of governmental might, though in case of an actual outbreak, short work will be made of the disturbers of the peace. John Bright, Mr. Foster, Secretary of State for Ireland, and, it is believed, Mr. Gladstone himself, are in favor of alterations in the laws. Nothing is being done just now in pressing the prosecutions against Parnell and the other agitators. The former has just gone to France, he says on private business, the public think to meet some of the exiled Fenian leaders.

[Evansville, (Ind.) Journal.]

Mr. Frank S. Mueller, 925 W. Franklin street, cited to a Journal reporter the case of Mr. Henry Rhenick, who for four years suffered with Rheumatism, which was cured by the use of two bottles of St, Jacobs Oil.

AGRICULTURAL NEWS.

A cold wave from the Rocky Mountains swept over nearly the whole country during the past week. There have been heavy snowfalls in the West, Northwest, and in the Northern parts of the Middle and Eastern States. Upwards of a week ago snow fell in West Virginia, North Carolina, Tennessee, and even in Northern Texas, yet not a flake has been seen here.....The exports of canned meats for the year ending Oct. 1, were about 665,000 cases. There is a good deal of complaint about the quality of the meat canned at Chicago—it is said all refuse meat goes into cans.

In Great Britain during the thirteen weeks ending Sept 25, 230 fresh outbreaks of pleuro-pneumonia were reported and 756 animals were attacked.....During the same time 602 fresh outbreaks of swine fever were reported, 3,061 swine having been attacked. Foot-and-mouth disease, too, was very prevalent. The Mark Lane Express of Nov. 16 in its review of the British grain trade for the past week, says: The weather has been mild but rainy, and altogether a large proportion of the wheat sowing has been accomplished under very favorable circumstances..... .....Mr. Edward Atkinson is working earnestly in behalf of the great exhibition of cotton, and the appliances for its cultivation and manufacture, to be held at Atlanta, Ga., and will personally visit many portions of the South to enlist supporters for his scheme..... The visible supply of grain, comprising the stocks in granary at the principal points of accumulation at lake and Seaboard ports, and the rail shipments from Western lake and river ports and afloat on New York canals:

Increase.....	1,105,000	

A copy of the important work just completed by Mr. S. B. Ruggles, on the agricultural progress of the nation and its effect in cheapening the food of America and Europe, was laid before the New York Chamber of Commerce by the Executive Committee last week. The consolidated tables show a growth in cereal products from 615,000,000 bushels in 1840 to 802,000,000 in 1850, 1,238,000,000 in 1860, 1,387,000,000 in 1870, 2,178,000,009 in 1877, and 2,431,000,000 in 1879. The annual product increased from $3,965,000,000 in 1850 to $7,977,000,000 in 1860, and $11,000,000,000 in 1870, yielding, after payment for labor and wages, a net amount of $2,170,000,000, or about twenty per cent. on the total. The statement is made that there are 400,000 000 acres of land immediately available, north of the Ohio River, which can produce in wheat, or other cereals, at least 4,800,000,000 bushels annually.

Storms are reported from all parts of Germany with serious floods in Wurtemburg.....Some of the German papers are advocating free trade in grain, on the ground that without it famine and distress will soon be at the door of the German peasant.....Landlords in England are still making large deductions of rent to their tenants—from 10 to 50 per cent.....Milling is said to be the largest separate manufacturing industry of the United States. The United States census in 1870 gave the value of the five leading industries in round numbers, as follows:—flour and grist mill products, 445,000,000 dols.; iron and manufactures of iron, 347,000,000 dols; lumber, 250,000,000 dols.; boots and shoes, 182,000,000 dols; woolen manufactures, 179,000,000 dols..... Formerly American breadstuffs went almost wholly to Liverpool whence they were distributed to France, Germany, Holland and other parts of the Continent. All this is rapidly changing, as continental buyers now mostly order directly from the American markets.

The Recipe

for Gilt-Edge Butter Maker was obtained from one of the most extensive dairy farmers of Ireland, noted for the excellent and superior keeping qualities of his butter, which was eagerly purchased by London dealers for export to India, where the warm climate puts butter to a very severe test. It has been thoroughly tried by a large number of

the very best butter-makers in this country, and they have given it their emphatic approval. Price 25 cents per package. Sold by all storekeepers.

COLLINS, N. Y., Feb. 19th, 1879.

Gentlemen :—We churned one gallon of cream to-day at a temperature of 56 deg., using your Gilt-Edge Butter-Maker. Time of churning, 15 minutes—result, 4 1-8 pounds of butter. Color, good. As we had not previously weighed our butter, of course we cannot tell whether there is a better per cent. or not, but appearances indicate it, and the quality is at least two cents per pound better. Yours, &c.,

M. E. WILBUR, Prop'r of Collins Creamery.

ARCHIBALD FORBES.—The famous war correspondent of the London Daily News is preparing for the Youth's Companion a series of articles relating his personal adventures on the great battle-fields of Turkey, Zulu Land, and in the Franco-Prussian War. Mr. Forbes has been six times a prisoner. Few men have had more remarkable experiences, and no one whose pen is so graphic in picturing them.

The ladies who some time since were unable to go out, having taken LYDIA E. PINKAM'S VEGETABLE COMPOUND, are quite recovered, and have gone on their way rejoicing.

TROPIC-FRUIT LAXATIVE removes Habitual Costiveness and all kindred complaints. It is composed entirely of concentrated fruits and medicines. Druggists sell it.

That low, nervous fever, want of sleep and weakness call for Hop Bitters.

Premature Loss of the Hair, which is so common now-a-days, may be entirely prevented by the use of BURNETT'S COCOAINE. It has been used in thousands of cases where the hair was coming out in handfuls, and has never failed to arrest its decay and to promote a healthy and vigorous growth. It is at the same time unrivaled as a dressing for the hair. A single application will render it soft and glossy for several days.

The Markets.

SPECIALS FROM THE CHIEF CENTERS.

Until Saturday, Nov. 20.

Boston.—BUTTER—Northern—Choice creamery, ₩ lb. 31@33c; choice New York dairy, ₩ lb. 27@28c.; choice Vermont, ₩ lb. 28@30c.; Long dairies, ₩ lb. 20@24c; common, ₩ lb. 15@17c.; Western—Choice creameries, ₩ lb. 29@32c.; fair to good, ₩ lb. 26@28c; dairy-packed, ₩ lb. 20@25c.; choice ladle-packed, ₩ lb. 19@22c; common, ₩ lb. 15@17c. CHEESE—Northern factory, fine ₩ lb. 13@13¼c.; Western factory, fine, ₩ lb. 12¾@13c.; fair to good, ₩ lb. 11@12c; common, ₩ lb. 8@10c. EGGS—Eastern, ₩ doz. 26@27c; New York State, ₩ doz. 25@26c.; Canadian, ₩ doz. 25c; P. E Island, ₩ doz. 26c; Western, ₩ doz. 22@25c; limed, ₩ doz. 17@19c; egg oats, 36c. VEGETABLES AND DOMESTIC FRUIT—Peerless and Prolific sell at 45c.; Northern Rose at 48@53c., and Eastern at 50@55c., the latter price for choice Houlton stock. St. John's potatoes sell at $1 50@1.60 ₩ bbl. Sweet potatoes sell fairly at $1.75@2 for Norfolks and $2.25 for Richmond. The market is rather heavy for onions, and sales are not so readily made; $2.75 per bbl. is the outside price for red, and yellow sell at $3 25@3 50, including Vermont, New Hampshire, York State, and Danvers and Marblehead stock. Apples are firm for shipping fruit at $1.25 ₩ bbl. and some lots of fancy eating apples will bring $1 50 per bbl, while fair lots sell at 75c. There is moderate demand for cranberries at $3.75@4.50 for country, and $5@6 for Cape berries.

Chicago.—WHEAT active and firm; No. 2 red winter, $1 08; No. 2 Chicago Spring, $1.08¼@1.08¾, cash; $1 08¾, November; $1.08¾, December; $1.10, January; No. 3 Chicago Spring, 95¼@97¼c. CORN active and firm; 45¾c cash; 43¼c bid December; 43¾@43¾c. January; 48¾@48¾c. May. OATS active and firm; 32¾@32¾c cash; 32¾@32¾c. December; 33c. January; 37¾@37¾c May. RYE strong at 86¼c. BARLEY active at 98c. PORK active and firm at $13@13 15 cash; $12 40@12 45 November and December. Lard active, firm and higher at $8 30 cash or December; $8 30 asked, the year; $8 32½@8.35 January. Bulkmeats steady and unchanged. BUTTER—Choice to fancy creamery, 29@31c. ₩ lb.; fair to good do, 26@28c.; fine to fancy dairy, 22@25c; good to choice dairy, 18@21c; medium to fair dairy in shipping lots, 15@17c; ladle packed, good to choice, 17@19c; fair to the best packing stock, 13@15c; grease butter, 8@10c. CHEESE—Choice to fine full cream cheddars 12@12½c. ₩ lb; common to good do 8@11c; prime part-skimmed 9¼@10¼c; and poor, hard skimmed stock nominal at 5@7c. CIDER—The supply is fair and good to choice juice sells at $3@3 50 ₩ bbl in a small way to the retail trade. Half-barrels were quotable at $1 50@1.75. HIDES AND PELTS—Green salted light hides 9¾@10c. ₩ lb; do heavy cows and branded, 9¼@9¾c No 2, or damaged, 8¾c; green-salted calf, 14c dry-salted hides 13c, and No 2 dry-salted and skins two-thirds price; dry flint, 15@16c; dry calf 15@17c, and deacon, 50c; green-salted and bull hides 6½c. Sheep pelts are in fair request at 32@35c ₩ lb for estimated amount of wool on each pelt. SEEDS—The market was quiet but firm for clover, slow for timothy, and easier for flax, while in other kinds there was hardly anything doing. We quote fair to prime medium clover at $4@4 50 ₩ bu; fine new mammoth do at $4 75@5; fair to good timothy at $2 20@2 30; fully prime do at $2.35, and flax at $1 19@1.20 for good, on a basis of pure. HOGS—Receipts of the week 208,000 head; the most ever received before was last January, one week, 276,000 head, quality very good; some sales lower, mixed packing, $4 45@4 70; light, $4.50@4 75; choice heavy $4 80@4.90; market closed weak, with 16,000 head unsold. CATTLE—Receipts of the week 35,000 head, against 34,000 one week last September, being the largest recorded; market steady; good to choice shipping, $4 60@5 15; common to fair, $3 60@4.30; butchers' steady and easy; common, $2@2.40; good, $2 80@3.30; stockers' steady at $2 40@3 30; half-breeds and natives, $3 20@4 10; through Texans, $2 60@3. SHEEP—Market quiet but steady; common to medium, $2.70@3 25; good, $3,50@3 90.

Cincinnati.—WHEAT strong; No. 2 amber, $1.08; No 2 Red Winter, $1.08@1 10. CORN firm; No. 2 Mixed, 52@53c.; new, shelled, 48c. OATS quiet; No 2 Mixed, 35c. RYE steady; No. 2 at 97c. BARLEY active and firm; No. 2, Fall, 96c@$1. PORK dull and nominal at $13. Lard strong and higher at $8 30. Bulk-meats quiet but steady; Shoulders $4 75; Clear Rib, $7.25. Butter in demand, and market firm; choice Western Reserve, 20@23c.; choice Central Ohio, 16@20c.

St. Louis.—WHEAT—No. 2 Red Fall, $1 06¼@$106¾, cash; $1 06¾@1 07¾, December; $1 09⅛@$1 10, January; $1 12@1 12¾, February; No. 3 do., $1 04@1 04¼; No. 4 do. 95c. CORN easy at 44¾@56c., cash; 45c., November; 43¾@43¾c., December; 43¾@43¾c., January; 43¾@43¾c., February; 46¾@47c., May. OATS firm but slow at 32½c. cash; 33½c bid, December; 34c bid January. RYE firm at 94¾c. BARLEY firm; prime to fancy, 75c@$1 05. WHISKY higher at $1 12. PORK dull at $13 75. LARD firm at $8 15. Bulkmeats quiet; Shoulders, $4 40@4 50; Clear Rib, $6 30@6 90; Clear Sides; $7@7 10. Bacon dull; Shoulders, 5½c.; Clear Rib, 8c.; Clear Sides, 8¼c. Hogs fairly active; Yonkers and Baltimores, $4 30@5 40; mixed packing, $4 40 4 65; butchers' to fancy, $4 70@4 80. BUTTER dull. We quote: Creamery—best at 30@32c. seconds at 26@28c; Dairy—selections at 25@26c, prime to choice 20c to 24c, fair 14c to 18c, common 12@13c; country in irregular pkgs at 12@13c to 16c. Roll coming in more freely—choice sells readily at 15@22c—top figures for Northern. WOOL—Demand limited and prices easy; Tub washed—choice 47c, No. 9 medium 45@46c, dingy and low 37@40c, lamb. 42¾@43c; Unwashed—choice mixed combing 29@30, coarse do 24@26, choice medium 28@29c; low do 23@24c, light fine merino 18@20c, lamb 24@26c, Kansas 25@26c, well grown fall clip Texas 23@26c, Burry, black, cotted, etc, 5@15c ₩ lb less—Southern burry sells at 12½@13c. HIDES—Steady, Dry Flint 18¾c damaged 15¾c; Dry Salt 14¾c—damaged 12¾c; Green Salt 9¾c—damaged 8¾c; Uncured 8c—damaged 7c; Bull and Stag 7c for green salted and 11¾c for dry; green calf 13c. Branded 10 ₩c off. SHEEP PELTS—Green: large 95c@$1, medium 60@75c, small 50c. lamb 60@75c, shearling 25@35c; dry—large 60@70c, medium and lamb 25@50c, shearling 10@30c.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Nov. 20, 1880.

BEANS AND PEAS.—Old crop beans do not conflict with new to any extent and the market is steadier and something higher for prime standards. Red kidneys are also stiffening; green peas weak; offered at $1.85@1.90 for Wis bbls.. and $1.75@1.80 for eastern bags. Southern B. E. peas $1 80@1.85.

Marrow beans, $1.80; other, $1.65@1.75; medium, $1.52@1.57; other, $1.40@1.45; pea, $1.55@1.75; white kidney, $1.75@1.90; red do., choice, $1.80@1.85; fair to good, $1.50@1.65; black, or turtle soup, $1.60@1.65; lima, $4 50@5.

BUTTER.—The approaching festival enlivens the demand and prices for all grades are named with confidence. Foreign shippers are not giving much relief to the stored lots of under grades, but a good local demand is a favorable start and it has not opened any too early. Very fancy creamery brings 33c at this moment. All full dairies showing a good average quality and money-making lots are selling promptly. This movement is the best feature of the market this week. Western butter has a full share of the active call. It is reported that 30,000 pkgs are dragging on the market in Liverpool. Roll butter not of fine quality as yet. This line of stock has lost much of its former demand, and it must be fine to keep a place in the trade.

Creamery, finest, 33c.; good to prime, 31@32c.; fair to good, 28@31c.; poor to fair, 25@28c.; sweet cream, 26@31c.; State entire dairies, choice, 26@27c.; good to prime, 24@25c.; fair to good, 23@24c.; firkins, 22@24c; State pails and half tubs, fine fresh 30c.; good to prime, 27@29c.; fair to good, 25@27c.; poor, 20@22c.; Welsh tubs, tall prime, 28@29c.; good to prime, 24@26c.; fair to good, 22@24c.; Western imitation creamery, 22@27c., dairy, fresh, 23@25c.; good to prime, 20@22c.; fair to good, 18@20c.; factory, June, 20@21c.; other, 13@16c; rolls, 19@21c.

Receipts for the week, 35,176 pkgs. Exports for the week, 6,803 pkgs.

CHEESE.—Shipments for the week have been moderate owing to the reason that only the strictly fancy September made have been urgently wanted by shippers in order to meet the Christmas trade. The accumulation of the other grades has not disturbed prices. Quotations are for

State factory, fancy, at 13@13¼c.; do. good and prime, 12½@12¾c.; do. fair to good, at 11@12c.; do. h'f skimmed, 8¾@10c.; Wisconsin factory, fine, 12¾@12¾c.; do. good to prime, 11¾@12¼c.; do. fair to good, 10@11¾c.; Ohio factory, fine, 12¾@12¾c.; do. good to prime, 11¾@12c.; do. flat, fair to good, 10@11¾c.; do. poor to fair 7@10c

Receipts for week, 33,519 boxes.
Exports for the week, 26,228 boxes.
Liverpool cab'e price, 67s.
Steam to Gt. Britain, 40@40s.

COTTON.—There has been an active inquiry and the market closed strong. The feature has been the cold weather and the fear of some damage to the crop. Latest prices are for

November at 10.91@10.95c.; December at 10.94@10.95c.; Jan. at 11.06@11.07c.; February at 11.20@11.21c.; March at 11.35@11.37c.; April at 11.48@11.50c.; May at 11.59@11.61c.; June at 11.70@11.72c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

DRIED FRUITS.—Apples have a good demand and prices very firm. Peaches meet with a very fair inquiry. Small fruits are generally well sustained in price. Quotations are for

Evaporated apples at 7¾@8¼c. for better qualities; sliced apples at 5@6¼c. for good to choice North Carolina 3¾@4¼c. for Va. apples, 6¼@4c. for Tenn. do; 4¾@5¾c. for State do; 3¾@5c. for western Ohio and Mich. Peaches at 27@30c. for evaporated peeled; 11¾@14¾c. for unpeeled do.; N. C. peeled at 18@20¾c.; for the better qualities, and 12@16c. for fair to good lots of peeled peaches; unpeeled peaches at 6¾@7¾c. for halves and 6¾@7c. for quarters. Plums at 5c. Blackberries at 8c. Cherries at 18c. Raspberries at 24¾@25c. Whortleberries at 12c.

Receipts for week all kinds, 2,852 pkgs.
Exports for week, 8,013 bbls. of dried apples.

EGGS.—Receipts for the week, 11,341 bbls.; do last week 11,379 do. The market continues strong for suitable table marks, and there is a better movement for bakers' and pastry lots. Limed begin to work steadily and their price relation to fresh admits an advance.

Near points 30c.; State and Pa. 27@28c: Western choice, 26@27c.; seconds, 24@25c.; Canadian, 25@26c; Southern, 26c.; limed State 18¾@19c.; do. Western 17¾@18¾c.

FLOUR.—There has been active business on export and home trade account, with prices higher and strong.

Latest prices are: $3.65@4.40 for very inferior to fancy superfine State and Western; $4.65@4.90 for poor to ch ice extra State and Western, odd lots and lines; $4.90@5.00 for choice to fancy do.; inferior to good white wheat, trade and family extras, $5.10@6 00; good to choice do at $5.00@6.50; (very fancy do. up to $6 85@7. an extreme) red and amber winter wheat inferior to choice trade and family, at $5.00@6 35; round hoop Ohio, $4.90@5.40; and trade and family brands of do. at $5.45@6 65, the latter for strictly fancy; St. Louis at $5.10@6.00 for interior to good extra; $5.00@6.50 for good to choice and $6.50@7.00 for choice to very fancy brands; Minnesota clear, inferior to fancy at $4.70@5.40; Minnesota "straight," poor to fancy, at $5 10@7.25, and patent inferior to fancy at $5.90@8.50; unsound stock at from $2.90@5 50; city mill extra at $5.90@6.10 for ordinary to very choice for the West Indies; do. for England, $4.85@5.00 for poor to choice spring wheat, and $5.00@6.00 for winter wheat product; do. trade and family extras, $5 90@7.00; do, for South America, $6.10@6 35, the latter for very choice: No 2 at $3 40@4.10 for inferior to very fancy.

BUCKWHEAT—Quoted at 58@60c. and buckwheat flour at $1 40@1.50.

Receipts for week, flour, bbls. 175,000; corn meal, do. 5,000; wheat, bush. 1,940,200; corn, do. 1,259,140; oats do, 284,025; rye, do. 159,450, malt, do. 43,300; barley, do. 557,250; beans, do., 12,083; rice, pkgs. 3,182.

Exports for the week, flour, bbls., 91,000; corn meal, do. 7,775; wheat, bush. 795,800; corn, do. 833,450; oats, do., 800; peas, do. 22,074; beans, do. 661; rice, 431.

FRESH FRUITS.—Apples still go abroad largely, 34,000 bbls for the week. Many of these have been bought here and in the country and have waited for freight room. Prices easy, and many Winter sorts are going in stock.

Western mixed lots, $1@1.25; Baldwins in shipping order, $1 25@1.50; Greenings, $1@1.25; Spitzenbergs, King $1.50@1.75; Pound Sweet, $1.75@2. Lady apples, choice, $7@8; poor to fair $3@5. It pays to sort the latter. Cranberries are active for local and out of town use; prices firmer. Cape Cod, fancy, $6@6.50; other $4@5.25; for boxes, $1.75@2.12; N. J., do. $1.25@1.75. Florida oranges are lot in good display for the season: choice half bbl. boxes $3.50@4; fair, $3. Burton pears, fancy, $4@5; fair to good $3@3.50. Cal. pears firm at $4@6 for Winter Nells and E. Beurre; $4@5 other varieties. Cal. grapes have worked into trade very satisfactorily; though prices are high there seems confidence enough in them to make a last shipment of 30 tons. Tokays $5@7 ₩ 40 lb. case; Emperor $7@8. State Catawba firm when in good order; 5@7c. in bulk; Delawares $3@3 50; Isabellas 3@4c. bulk; $1.50@1.75 cases. Peanuts continue low: Va. hand-picked 4¼@4¾c other grades 3¾@3¾c, new crops. Chestnuts scarce, worth $3@3.50 ₩ bush of 60 lbs: Northern, and $2@2.50 for do. Southern. Hickorynuts quiet; $1.75@2 ₩ bush of 50 lbs. Bull nuts 75c@$1. Black walnuts 50c. Pecans 9¾@9¾.

BEESWAX.—Has a higher demand, with 28@24c, quoted for Western and Southern.

GRAIN.—Wheat has been very active and higher. Speculators have seized upon the feature of cold weather along the canals as likely to interrupt navigation and extensive operations have resulted. Latest prices are of extra white at $1.23¾; No. 1 white at $1 21¾@1.22; do. November at $1.20¾@1.21¾; do. December at $1.21¾@1.22¾; do. Jan. at $1.24@1.24¾; do. steamer at $1.18¾@1.19, ungraded white at $1.19@1.22; No. 2 white at $1.20; mixed Winter at $1 20; No. 1 red at $1.18@1.23½; No. 2 red at $1.22¾@1.21¾; do. November, at $1.22¾@1.23¼; do. December at $1.23¾@1.24¾; do. January option, at $1.25¾@1.26¾; No. 3 red at $1.16; ungraded red at $1.16@1.23½; No. 2 Chicago spring at $1.17; New York No. 2 Spring, November at $1.18 bid and 1 20 asked. Rye at $1.01@1.03. Corn is higher and active; latest prices are for New York No. 2 at 59¾@60c.; do., November at 59¾@60c.; do., December at 60¾@61¾c; do. January at 61¾@62¾c. ungraded mixed Western at 57@58c.; No. 3 at 57¼@57¾c.; No. 2 white at 60@60½c. New York yellow at 60@60½c; low mixed at 56c, whith southern at at 58@60c. Oats are doing better with a liberal demand: latest prices are New York No. 2 white at 41¾@41¾c.; No. 3 white at 43½c.; New York No. 1 at 44c; New York No. 2 at 43¾@44c.; do. November at 43c.; do. THE NEW ARRIVAL.

MA.

A CHARMING little tiddy iddy bit of mother's bliss,
A tiny toddles, sweet as flowers of Spring;
A precious popsy wopsy—give its mammy, den a kiss,
A pretty darling itsy witsy ting!

PA.

So *that's* the little fellow! H'm! A healthy looking chap,
Another mouth to feed as sure as fate!
No, wife, I *don't* consider that his coming's a mishap,
But still I *could* have done with less than eight.

BROTHER.

My eye! Is that the baby? What a jolly little pup!
But I say, ma, wherever is its nose?
And I say, father, by and by, when he gets more grown up,
He'll wear my worn-out jackets, I suppose.

UNCLE,

Another? Well, thank goodness, I'm not a married man,
What! Don't I think him pretty? No, I don't.
To keep him from the workhouse you must do the best you can;
Don't think that I'll assist you—for I won't!"

DOCTOR.

How are we getting on to-day? I trust we soon shall mend,
We mustn't think we're strong just yet, you know:
We'd better take a something which this afternoon I'll send.
And let me see—hum!—ha!—ah, yes—just so.

NURSE.

He's lovely, that he is, mum! See them sturdy little legs!
He's twice the size of Lady Smither's third;
And when he comes a-cutting of his little toosey pegs,
He'll be a man, he will, upon my word.

NEIGHBOR.

Oh yes, dear, he *looks* healthy, but you mustn't trust to that—
I do not wish, of course, your dearest hopes to dash,
But when I see a tender babe, so ruddy, strong and fat,
I—look, dear, on his face! Is that a rash?

MA (*da capo*).

A charming little tiddy iddy bit of mother's bliss,
A tiny toddles, sweet as flowers of Spring;
A precious popsy wopsy—give it's mammy, den a kiss.
A pretty darling itsy witsy ting!

WINDOW GARDENING.

MAUDE MEREDITH.

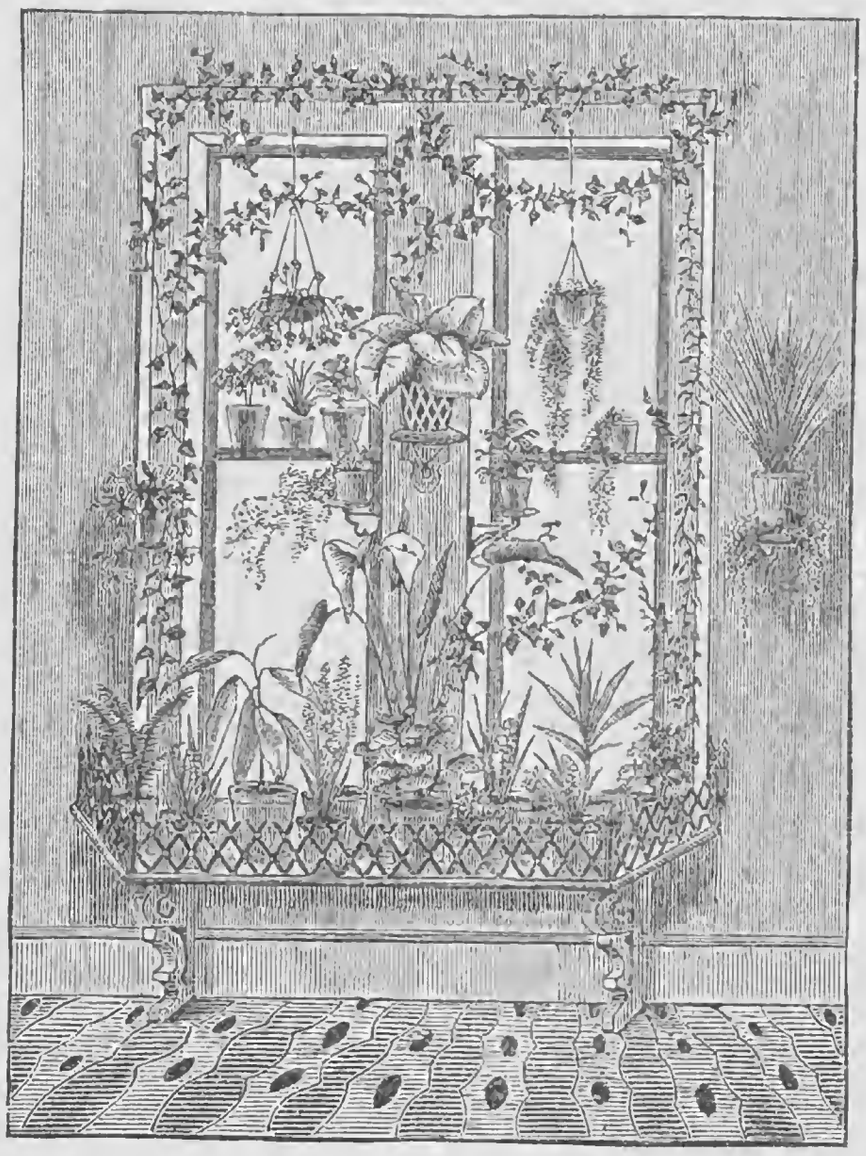
AN illustration is given upon this page, figure 398, showing the pleasant appearance of a window furnished with plants during the Winter months. Many a child has found his first development of taste for rural subjects in the contemplation of the beauty of growing plants in the house in Winter. The window need not be as elaborate as here shown, but plants may be of such number as the circumstances will admit.

There is in window gardening one advantage not found in using pots alone, as in parlor gardening. Window-boxes may here be used and less care will be required, and so a greater variety of plants may be cared for in a small space. As here shown the window garden consists chiefly of pots set upon brackets and shelves, making a very ornamental appearance; but a box or boxes may be used alone, or with pots, and vines trained up the window or upon the walls. Hanging-baskets make a fine addition, especially in the absence of brackets.

The window-box may be a simple wooden box of the shape desired, or more elaborate and expensive, and made of pottery-ware, or lined with zinc, as the taste and means dictate. A box of the length of the window-sill, or two made to fit the sill for convenience of handling, covered inside with pitch, or they may be used plain. The outside may be ornamented with coarse bark or simply painted. The earth should be light and porous and with coarse gravel or charcoal in the bottom. If preferred, there may be small boxes and placed upon an old table, or upon a stand purposely constructed, with one stair above another. The addition of simple trellises or uprights with cross-pieces and the training of vines upon them gives a pleasant variety, but whatever may be said, the taste of the gardener should be cultivated by designing and arranging these details so far as possible.

If a couple of wires or willow strands or ratans are bent over from one end of the box to the other and slats fastened across them a couple of wax plants, hoya carnosa, may be planted and will grow over the arch making a complete mass of waxen beauty. The leaves, like the English ivy, are strong and firm, never falling off unless through some accident, and as they will bear almost any neglect they seldom lose a leaf. A soft sponge will clean the dust from the leaves, and the great clusters of fragrant bloom of a pure waxen white, are of rare beauty, remaining perfect for weeks. The buds usually set the season before blooming, and if the flower is not cut; will bloom year after year from the same flower stalk. It is also a rapid grower, I have had one young plant throw out four branches, or runners, each about two yards in length in one season. The wax plant requires a light, sandy soil, and only a small quantity of water. A very rich soil kept moist will rot the plant off near the root. In the same pot can be placed any drooping vine, the numerous family of sedums, moneywort, or that prettiest of all droopers the Coliseum Ivy, Linaria Cymbalaria. On a lower shelf may be placed pansies and primroses. As they require to be kept cool, a north window suiting them best, but as most windows are raised more or less above the baseboard they will find sufficient shade, and very few are the house plants that afford greator satisfaction. Care should be taken in watering the primrose that no water fall on the buds, as it causes them to rot. In the Spring they can be turned out into the shady border, and another Autumn the plants should be divided and put into small pots, and kept shaded until well rooted, then as they grow, repotted using a pot of larger size. The primrose usually commences flowering in December, and continues until the next May or June. For a hanging basket, nothing could be prettier than a clump of oxalis bulbs, mixed varieties, if preferred, or an entire basket of a single kind. This plant also prefers a light sandy soil with liquid manure occasionally. I have sometimes had my oxalis disappear entirely, and at first thinking it dead I turned the soil out of the pot, when I discovered quantities of bulbs, fresh and just ready to start a new growth which they soon did, blooming with fresh vigor. Just the cause of the freak I never understood.

For the shelf in front, a tall trellised fuchsia for centre piece with foliage plants on either side will make a brilliant showing, and after filling the box with geraniums or other shrubby plants, set German ivies or any other drooping vine along the edge to cover the front of the box and twine about the rustic supports. No window will be perfect without pots of English ivy on either side to arch the window. Too much cannot be said in praise of this hardy plant for indoor use. Growing either in the shade or in the sunlight, bearing almost any change of temperature to which a living room is subjected, it still thrives and goes on its quiet way to beauty and perfection.



WINDOW GARDEN.—FIG. 398.

Maderia bulbs planted in boxes and hung behind pictures will send out dainty runners and entirely wreathe the cords and frames, although preferring strong sun and rich earth, yet they will do very well on the most meagre fare. And the common ground ivy—the Jill-go-over-the-ground—of our childhood's kitchen garden, makes a very airy delicate basket plant. The sweet alyssum of our mother's flower borders is also utilized, and this, like the mignonette, should be planted in the pot where it is expected to bloom, as transplanting after the profuse blooming of Summer they are sure to die.

All plants, as well as people, require fresh air, and their leaves, which serve for lungs, should be kept as free from dust as possible. A fine rose wateringpot will aid in cleaning the leaves and leaf stalks always showering the plants in preference to pouring a quantity of water about the roots, which necessitates a strip of oilcloth underneath the plants, that can be readily wiped up, giving the plants proper care without injuring the carpets.

A steady temperature of from 60 to 70 degrees by day and down to 50 at night is best adapted to the requirements of most plants grown in common windows.

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK: I have been thinking I would write to you for a long time, but have been afraid it would be so poor a letter it would never escape the waste basket; but if you will accept my humble self as one of your nieces, I will try and write again. I am very fond of flowers, and have a window-garden, and have a small variety of flowers in our yard. I wish to ask if I should dry the roots of geraniums before hanging them up in the cellar by their roots for Winter. A friend told me she dried hers before she put them in the cellar. Our cellar is quite damp, and I would like to inquire of Uncle Mark and of all the cousins, if there is a pure white fuchsia owned by any of them, and if I could get a plant of this color by sending to a florist. Your niece and cousin,

MAG(GIE)NOLIA.

[We have lost your address. There is no certainty in obtaining colors of fuchsias. There is no special need of drying the roots of the geranium before hanging them up.—U. M.]

UNCLE MARK: I am thirteen years old. We came up here to the back woods of Canada to try and be farmers. I would like to join your club and be one of the cousins, if you will accept me. Next Spring I am to have a patch of ground to cultivate for my own, and I would like to get all the seeds I can to try my skill. JAMES COLE,

Uplands, Ont.

DEAR UNCLE MARK:—I would like to join the Horticultural Club and become one of the cousins. I am 13 years old, I play the violin and can play a little on the guitar, but I can't say I have done very well in raising flowers. This is our first year of taking the RURAL and we all like it very much. I like to read the cousins' letters. We live 65 miles from Chicago. From your niece,

Iroquiose Co., Ill. LAURA JANE KENWORTHY.

DEAR UNCLE MARK:—I am a little girl 11 years old. I would like to join your club. My papa has been taking the RURAL for two years. I have a Canary bird and my mamma has quite a number of house plants. Please remember us when you send seeds. Your niece, LINNIE BERLIN.

Clarion Co., Pa.

DEAR UNCLE MARK:—I am a little girl 11 years old. Papa has taken the RURAL for 18 years. I have two little sisters, Effie and Nettie. We all wish to join your club. Please remember me when you send seeds. From your niece,

Muscatine, Iowa. SARAH EDITH FRAZIER.

The Puzzler.

Sabbath Reading.

THE GOLDEN SIDE.

THERE is many a rest on the road of life,
If we would only stop to take it;
And many a tone from the better land,
If the querulous heart would wake it.

To the sunny soul that is full of hope,
And whose beautiful trust ne'er faileth,
The grass is green and the flowers are bright,
Though the wintry storm prevaileth.

Better to hope, though the clouds hang low,
And to keep the eyes still lifted;
For the sweet blue sky will soon peep through,
When the ominous clouds are rifted.

There never was a night without a day,
Nor an evening without a morning,
And the darkest hour, the proverb goes,
Is the hour before the dawning.

There is many a gem in the path of life
Which we pass in our idle pleasure,
That is richer far than the joweled-crown
Or the miser's hoarded treasure;

It may be the love of a little child,
Or a mother's prayer to heaven,
Or only a beggar's grateful thanks
For a cup of water given.

Better to weave in the web of life
A bright and golden filling,
And to do God's will with a ready heart,
And hands that are swift and willing,

Than to snap the delicate silver threads
Of our curious lives asunder,
And then blame heaven for the tangled ends,
And sit to grieve and wonder.

SITTING DOWN WITH JESUS.

"COMMAND the multitude to sit down," They do so, in long lines, upon the verdant grass. He takes the five loaves and two fishes out of the rustic lad's basket, and begins to distribute. The meager provision grows and grows, until not only are all the thousands abundantly fed, but there is a surplus of broken food to fill a dozen baskets.

There is something akin to this in our spiritual experiences. We often worry like the disciples, about the best means of feeding our souls, or of bringing the Gospel bread to needy souls around us. We invent new methods; we try all manner of devices; we get up all "attractions" in the sanctuary and the Sabbath school; we go to all sorts of "villages to buy." "Oh, if we only sit down with Jesus, and accept what he bestows, with His rich blessings on it! Oh, if congregations would sit and receive the Gospel of life from their own Shepherd, and pray over it and practice it! If teachers would only aim more to keep their classes sitting quietly at the feet of Jesus, to take in His truth, and to think about it! The transcendent truth of the new birth was revealed to Nicodemus when he sat as an inquirer at the Savior's feet. The woman of Sychar found the well of salvation only by waiting to be taught by the great Teacher. The most zealous worker needs to have instruction, prayer, reflection, and heart-converse with God, or else he will become superficial and shallow. Like Mary he must sit down with Jesus, and gain deep views of Jesus and of himself.—Rev. T. L. Cuyler.

THE HOUR BEFORE CHURCH.

I HAVE in my eye at present the hour before you go to church on the Sunday forenoon. I am anxious about it. The note struck then is likely to give tone to your spirits all day. Redeem it as much as you can from family duties; redeem it wholly from plaiting and putting on of apparel; redeem it wholly from all vain conversation. How very much the power of the minister depends upon the preparing of the hearer's heart! If you once come up to church with your mind crowded with trifles, what can ministers do? They can do nothing but beat the air. What else can they do if there be nothing before them but air to beat at? It will make a sound, and that is all. I fear that many of my dear people spend more time on Sunday morning in putting veils on their faces than in taking the veils off their hearts—more time in trying to make themselves appear before men what they are not than in trying to make themselves appear before God what they are.—W. Arnot.

THE LORD WAS WITH JOSEPH, yet it might not have seemed so to some men in Joseph's condition. Hated by his own brethren. Sold into slavery. Lied about because of his well-doing. Cast into prison unjustly. Did that look like having the Lord's presence? "But the Lord *was* with Joseph." And the Lord is with a great many of His children who are having a very hard time in the world. Because we are hated, and are lied about, and are suffering unjustly, we mustn't think that the Lord has neglected us. It is our own personal comfort, our personal prosperity, our personal popularity, that is the test of God's presence and favor. He is just as near to us when everybody else seems to have deserted us as when we are the center of a great circle of love and admiration. And it is better to have the Lord with us in a prison than to be without the Lord in a palace.—H. Clay Trumbull.

A LADY on one occasion said to Mr. Wesley:—"Supposing you were to know that you would die at 12 o'clock to-morrow night, how would you spend the intervening time?" "Why, just as I intend to spend it," said he. "I should preach to-night at Gloucester, and again to-morrow morning. After that I would ride to Tewkesbury, preach in the afternoon, and meet the Society in the evening. I should then repair to friend Martin's house, as he expects to entertain me; converse and pray with the family; retire to my room at 10 o'clock; consign myself to my Heavenly Father; lie down to rest, and wake up in glory."

PERSONAL ITEMS.

Senator Matt. H. Carpenter is attending to business in Washington, although his health is precarious.

Mrs. Frances Hodgson Burnett is so ill that she writes while lying on her back. She is writing a new novel.

A Liverpool paper announces that Mr. Hayes will visit England next year and occupy the pulpit of eminent Wesleyans.

Solon Robinson, the well-known writer on agricultural topics, died on Thursday week at Jacksonville, Fla., where he had gone for his health.

Colonel Ingersoll expects to remain in Washington, which he considers as good a town to loan money in without collateral as any in the world.

President-elect Garfield is having his house at Mentor painted slate color. Now he can, with a piece of chalk, write the names of his forthcoming Cabinet on it.

Mr. Russell Hancock, son of General Hancock, who, with his family, has been spending the Summer on Governor's Island, has gone home to his plantation, in Mississippi.

Major Walsh, of the Northwest Mounted Police, whose name has recently been associated with Sitting Bull's surrender, is in Chicago to undergo treatment for an attack of erysipelas.

Justice Swayne, of the United States Supreme Court, is said to know that his place, upon his retirement, is to be filled by Stanley Matthews, to whom it was promised three years ago.

It seems possible to have a good many acres in County Kerry without much income from them. Lord Lansdowne's 94,644 acres are valued at £8,042 a year, Lord Ventry's 91,501 at £15,283, Mr. Bland's 32,540 at £2,638, the O'Donoghue's 10,405 at £887.

The best people will vote for the best man every time. And we judge by the number of the St. Jacobs Oil constituency, that it is the best remedy for rheumatism known. Prof. Tice, of St. Louis, among others, think so.

KIDNEY-WORT

PERMANENTLY CURES
KIDNEY DISEASES,
LIVER COMPLAINTS,
Constipation and Piles.

Dr. R. H. Clark, South Hero, Vt., says, "In cases of Kidney Troubles it has acted like a charm. It has cured many very bad cases of Piles, and has never failed to act efficiently."

Nelson Fairchild, of St. Albans, Vt., says, "It is of priceless value. After sixteen years of great suffering from Piles and Costiveness it completely cured me."

C. S. Hogabon, of Berkshire, says, "One package has done wonders for me in completely curing a severe Liver and Kidney Complaint."

IT HAS WONDERFUL POWER. WHY?

Because it Acts on the LIVER, the BOWELS and the KIDNEYS at the same time.

Because it cleanses the system of the poisonous humors that develope in Kidney and Urinary diseases, Biliousness, Jaundice, Constipation, Piles, or in Rheumatism, Neuralgia and nervous disorders.

KIDNEY-WORT is a dry vegetable compound and can be sent by mail prepaid.

One package will make six qts of medicine.

TRY IT NOW!

Buy it at the Druggists. Price, $1.00.

WELLS, RICHARDSON & CO., Proprietors,

12 (Will send post paid.) Burlington, Vt.

Liquid KIDNEY-WORT

In response to the urgent requests of great numbers of people who prefer to purchase a Kidney-Wort already prepared, the proprietors of this celebrated remedy now prepare it in liquid form as well as dry. It is very concentrated, is put up in large bottles, and is equally efficient as that put up dry in tin cans. It saves the necessity of preparing, is always ready, and is more easily taken by most people. Price, $1 per bottle.

CLARK'S IMPROVED ROOT CUTTER

PERFECTION OBTAINED IN

CUTTING ROOTS

This Cutter has *received* the First Premiums *at every Fair*, and has no *equal*. Do not fail to examine it.

The Neatest, Strongest, Simplest, Cheapest, and most Perfect Root Cutter in the Market.

This Cutter is built with a heavy oak frame, well bolted together; is staunch and strong, neatly finished, handsomely striped and ornamented. The cutting apparatus consists of *twenty-five steel knives* (gouge shaped), so arranged on a wrought-iron shaft that they are perfectly secure; no chance of becoming loose or breaking. The roots are neatly cut in pieces suitable for feeding. No coarse, ungainly pieces are left by this Cutter. A boy can easily cut 35 to 40 bushels per hour, so easily does it do its work. ☞ Don't fail to examine it. ☜

We are manufacturing three sizes, designated by numbers.—1 2 and 3.

Nos. 1 and 2 designed for hand use.

No. 3 is the Power Cutter, and will cut 100 bushels per hour.

Humorous.

"WHAT I wants ter know," said an Arkansas school board official, "is how a river's mouf is gwine ter be bigger dan its head.

"WELL, wife, you can't say I ever contracted bad habits." "No, sir; you generally expanded them."

BOSTON recently celebrated its 250th anniversary, and it is said that some of the hotels served up for the occasion Spring chickens born on the identical day the city was founded.

An Irishman of a mechanical turn took off his gas meter to repair it himself, and put it on again upside down. At the end of the quarter it was proved that the company owed him $15.75.

"ONE HALF of the world doesn't know how the other half lives!" exclaimed a gossiping woman. "Oh, well," said her neighbor, "don't worry about it, 'tisn't your fault if they don't know."

"WE had a short-cake for tea," said a little girl to a neighbor's boy, to whom she was talking through the fence. "So did we," he answered; "very short—so very short it didn't go round."

A SOUTHWESTERN editor, speaking, of a large and fat contemporary, remarked that if all was grass, he must be a load of hay. "I expect I am," said the fat man, "from the way the donkeys are nibbling at me."

An Unfortunate Delusion

Exists, that the liver can be regulated, and the bowels kept in a state of efficiency by the use of mercury, and purgatives of a drastic nature. A complete refutation of this absurd theory is furnished by the fact, that no class of persons suffer more severely with biliousness and its attendant ailments, dyspepsia and constipation, none are more "out of sorts" than they who habitually use such remedies. The wisest course they can adopt, and one productive of speedily beneficial results, is to use instead of such pernicious drugs, Hostetter's Stomach Bitters, which accomplishes the work they leave undone. Botanic in origin, pure, active and highly recommended by medical men, this article has no affinity with medicines which act abruptly. It aids, does not force Nature, and its invigorating effect is as perceptible as its regulating influence is prompt and lasting.

Horticultural.

VICIA SATIVA—VETCH.

H. W. RAVENEL.

THERE are four indigenous species of vetch in this country east of the Mississippi, namely, Vicia Caroliniana (Walt.), V. acutifolia (Fill.), V. micrantha (Nutt.), and V. Americana (Muhl.). The first three are mostly confined to the Southern States, the fourth is not found south of Kentucky.

The native vetches, however, are all feeble in habit and growth, and mostly confined to the borders of thickets and damp woods, rarely ever attempting to dispute possession of the richer open pastures with weeds and the stronger grasses. They have never attracted much attention as forage plants.

It is a curious fact that not only have our foreign population become so readily naturalized and assimilated in this country, but a vast number of foreign plants have also found here a congenial home, and have outstripped the native species in hardihood and vigor. The vetch is one of these. Vicia sativa, the common vetch of Europe, is found all over our country.

Here in the Southern States it is specially vigorous and widespread in all directions. I have frequently had specimens sent to me for name from this and adjoining States, described as a most luxuriant and promising forage plant. It grows mostly in rich, dampish grounds and waste places, in the corners of cultivated fields, gardens, etc. In good soil it attains a hight of two to three feet. The stems are tender, soft and succulent, and the whole plant is eaten with avidity by animals. This species is an annual. It flowers here about May. The seeds ripen and fall in the course of the Summer, and the plant dies out. Towards Autumn the seeds germinate and the young plants grow slowly all Winter, running up rapidly at the approach of Spring.

This species may be readily distinguished from the other introduced vetches—viz., V. cracca, hirsuta and tetrasperma—by having the flowers in pairs, sessile in the axils of the leaves. The others bear their flowers on elongated peduncles. It could doubtless be cultivated in many parts of the Southern country very profitably as an early green forage plant, and also be cured as hay for Winter use.

Later in the season, and during the Summer months, the cow-pea is the general favorite, as giving the greatest yield, both for hay and for vegetable matter to enrich the soil.

Aiken, S. C.

NOTES FROM THE RURAL GROUNDS.

Grape Vine Specific Names.

SPECIALISTS, from long familiarity with them, are prone to use terms which are not understood by the majority of those who are the very ones to be enlightened. During the present unparalleled interest in new cross-bred or hybrid grapes the originators speak of them as of Lubrusca, Æstivalis or Vinifera origin, as if these botanical names were as well known as those of the common plants of the garden. It is desirable, however, that they should be, since the present grape revival is not one that is likely soon to die away, for the field of research is one that is scarcely more than well entered, and it would be hard to exaggerate the interests which may be centered in the future grape industry of this country.

VITIS VINIFERA, which has been extensively used as one of the parents of our new hybrid grapes, is the European species. From this it is supposed that the thousands of varieties of grapes cultivated in Europe have originated. But they are not hardy in this climate, and the object of crossing our native species with them is that we may combine in new seedlings the best characteristics of each, while still preserving the hardiness and vigor of our native kinds. There are many lesser marks which aid in determining this species, but the most prominent characteristic—though this cannot be accepted as an invariable guide—is that the skin adheres to the pulp, while in our native species the pulp readily slips out of the skin when the latter is pressed.

THE EUROPEAN VETCH—Vicia Sativa.—Fig. 399.
From a Specimen sent from Aiken, S. C.

VITIS LABRUSCA.—This is our Northern Fox Grape, common in moist thickets. The berry, of a purple or amber color, with a tough musky pulp, is about three-quarters of an inch in diameter, ripening in late September. The earlier improvements of this are the Concord, Isabella and Catawba, while the Concord is one of the parents of most of the scores of new varieties which are now being introduced. The leaves are woolly beneath, and when lobed the sinuses are rounded and not angular.

VITIS ÆSTIVALIS.—This is our Summer Grape, which is also common in thickets. The berries are scarcely one-third of an inch in diameter, black with a bloom, pleasant in flavor, and ripe in October. Mr. Ricketts has used this to some extent as a parent for several of his hybrids—we know not with what results.

VITIS CORDIFOLIA.—This is our Frost or Winter Grape. The leaves are thinner than those of the others (never woolly), and coarsely-toothed, without conspicuous lobes. The berries (a quarter of an inch broad) are a dark-blue or black with a bloom; sour, ripening after frost. The flowers are sweet-scented, and it is found in thickets or along river banks.

VITIS VULPINA is the Southern Fox or Muscadine Grape, and the original of the Scuppernong. The bark is not thrown off as in the others, in strips, but is close like that of a young pear tree. The leaves are roundish-heart-shaped, shiny on both sides, coarsely toothed and rarely lobed. The berries are about three quarters of an inch in diameter, musky, thick-skinned, purple without bloom, ripe in Autumn, and borne in small bunches. This is common along river banks from Maryland, Kentucky and southward.

Here, then, we have the stock out of which our grape growers are to manufacture, so to speak, our improved grapes. It would seem that we have the least to hope for from seedlings of, or crosses with, the Frost or Summer Grape, and that we have most to hope for from the others. The work has scarcely begun, and yet the results have been both gratifying and astonishing beyond all parallel in the history of pomology.

LARGE RASPBERRIES.—We read of a new Black-cap raspberry called the Hoosier Mammoth, some berries of which have measured one inch in diameter. The size of large fruit is often guessed at, and, without the least thought of deceiving, people exaggerate it in their own minds as if in appreciation of the beautiful specimen which they have plucked or which has been placed before them. This is very natural. One prefers to add to the merits of that which is fair, rather than to belittle it. Raspberries, whether red or black, rarely attain the size of one inch in diameter, as may be seen from our smaller diagram, on next page which is precisely of that size.

So with strawberries. We often hear of specimens two inches in diameter and occasionally those of three. By comparison, however, with the outer circle, which is precisely two inches in diameter, it may appear how easy it is to be mistaken.

THE GOLDEN JAPAN RETINOSPORA.—This is now (Nov. 20) as golden as gold itself. There is no other evergreen that is more pleasing, more striking for the Winter garden, while its Spring growth of a feathery, soft, pale-green color is no less beautiful. It has proven entirely hardy here during six years, and we say to you, good reader, if you have evergreen shrubs to purchase next Spring, forget not the Retinospora plumosa aurea.

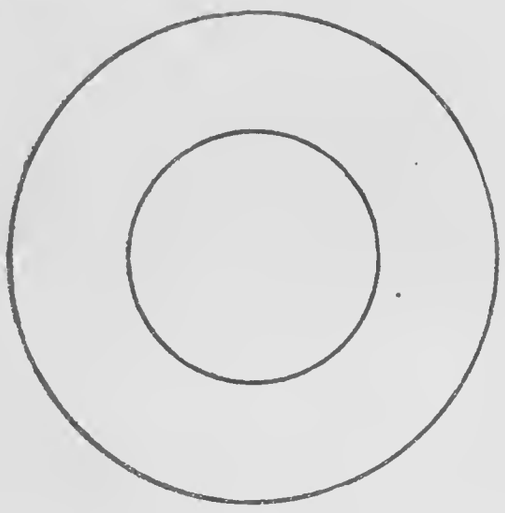

FIG. 401.

RUDBECKIA HIRTA.—In the London Garden we find the following respecting this Cone Flower:

"For planting in front of shrubs or making large masses in the grounds, this is one of the finest plants that can be grown. The flowers are single, orange-yellow, with a black center, and, like all single flowers, are greatly in favor with ladies when cut for the drawing-room. When grown in rich, heavy soil the plant remains in beauty from the end of August until the flowers are destroyed by frost. Another point in its favor is that it is easily and rapidly increased by division of the roots, and when fairly established annual top-dressing is all that it requires, but, like all the herbaceous tribe, it enjoys good fresh soil, and when the beds become crowded the plants should be broken up and replanted."

This flower is spreading rapidly over the Eastern States, where it seems to have been introduced with clover seed from the West, and it bids fair to become in many places as great a pest as is the Ox-Eye Daisy-Leucanthemum vulgare. Our English friends need not trouble themselves as to how it may be increased or best cultivated. We can assure them that if left alone it will be found to take care of itself only too well.

RURALISMS.

IN bringing forward the subject of labels I had no intention of speaking of those of zinc written on with a common lead pencil. I see that some speak of this use of zinc labels as something comparatively new; but I was all over this ground a good many years ago, and could show, if necessary, some pretty old zinc labels written on with a common lead pencil. I think it must be more than 25 years ago that I received from my old friend, the Hon. Marshall P. Wilder, a communication on this very subject, and published it. He had at that time, if I mistake not, been writing on zinc labels with a lead pencil for several years, and with satisfactory result. It was that communication that first brought this use of zinc before the public, and it did much good; for many orchardists and others have from that time used the zinc and common lead pencil. Probably many more will use it now. I am familiar with all this, but still it does not meet the point I had in view. I want to stop that profanity, and zinc will not do it.

I had just written the above, to give credit where I know it is justly due, when I received a welcome letter from Mr. Wilder, from which I make an extract. It is interesting in showing how Mr. Wilder first came to use the common lead pencil. Mr. Wilder says: "I have noticed in the "RURAL" the notes on zinc labels. The story is that some thirty or more years ago, when they were first introduced, the writing was done with a chemical ink of sal ammoniac, etc.; but not having this in my pocket, I wrote with the black lead pencil, and in a year or two I found that it became permanent, and I have used them ever since. This I made known (through the Horticulturist, I think). [It was through the Horticulturist.] I use them also for my camellias and green-house plants. The philosophy of the thing, is, that while the zinc corrodes, the plumbago is impervious to the atmosphere. I have been amused to see how many have claimed the discovery." It was a "happy thought" which led Mr. Wilder to use the lead in this case.

How very beautiful the Black Alder (Prinos verticillatus) is looking just now, especially on low grounds. In clumps and as single plants they seem to warm up the imbrowned landscape, and remind one of a warm Autumn sunset. Is there a more ornamental berry-bearing plant? One could almost regret that they are native plants, as otherwise we might sometimes see them in the border or on the lawn. Though usually found on low and moist ground, I have seen many a fine specimen growing on the upland. I use it for lawn planting and shall continue to do so, as I find it to do well, besides being exceedingly ornamental at a time when most other plants have taken on the sober hues of Winter.

I notice what Mr. Henderson says about pot-grown grape vines; but he fails to catch the point. Let me see if I can make it plainer. A man who has won public favor and confidence may do a good thing and be praised for it; or, at least, it will be accepted as a good thing, as it should be. Another man, who, instead of public favor, has, for some reason, aroused against himself a strong prejudice on the part of his professional brethren and a part of the public, may do the same good thing and be abused for it. That was Dr. Grant's case. While suffering most from it he said a time would come when a man could grow good pot vines without being abused for it. That time has been for several years. There can be no doubt that some vines, and especially the Delaware, were much enfeebled by being propagated from green wood; but that was so great an evil that in time it corrected itself. There have been several other cases of a similar nature, and all of them men who were eminently benefactors of horticulture, but victims of unreasoning prejudice. It has always seemed to me that their punishment was altogether disproportionate to their foibles. As to grape-vines, my conviction is that a well-grown pot vine is about the best vine that can be grown, and the more we have the better.

The mealy bug has been, and still is, so very abundant as to give rise to very general and loud complaints. I noticed in many places last Summer such numbers of both mealy bug and scale as I have never seen before, and I noticed at the same time a remarkable absence of the green fly. Many fine plants were hopelessly ruined. A description of the condition of a plant lately brought to me by a lady amateur may help some to fight this pest somewhat successfully. She had several times gone carefully over some plants, and killed every mealy bug she could *see*, but it would not be long before they were covered again. Finally she determined to know where they came from, and took a seat by the side of one of the worst, a Passiflora Decaisneana. Presently she saw the mealy bugs coming out of the soil. She drew the earth away for about an inch around the stalk, and found the mealy bugs crowded together nearly half an inch thick. The top (about 20 feet) was cut off and the plant brought to me. It was in a ten-inch pot. On being turned out of the pot the roots were found to be densely covered with mealy bugs from top to bottom. It is safe to say that there was fully half a pint of mealy bugs in that pot. She informs me that she found the roots of other plants to be covered in the same way, but not so badly, except a large specimen of Cereus flagelliformis. This lady's discovery should be of great value to those not familiar with the habit of the mealy bug.

In such a case my treatment would be of the heroic kind. I should turn the plant out of the pot, plunge the ball of earth in a tub of strong soap-suds, wash away all the soil, and clean off every root. I should then repot carefully and shade the plant till it showed signs of growth. If necessary I would top-prune. If the plant were not a valuable one I would destroy it. There is no insect pest so much to be dreaded in the green-house as the mealy bug, and none so difficult to destroy. It must not be supposed that you can drown them. I have plunged a plant to the bottom of a barrel of water and let it remain there three days without killing them.

HORTICOLA.

[How would it do to dip the roots in alcohol? Eds.]

Pomological.

POMOLOGICAL IMPROVEMENT IN MICHIGAN.

T. T. LYON.

APPLES.

In the matter of apples very little has recently been developed in the way of originating and bringing out new varieties. It is, however, true that the Shiawassee Beauty (a new fruit of twenty years since) not only retains its popularity with those who try it, but that, with no one interested in pressing it upon public attention, it is slowly but steadily displacing that old favorite of the north, the Fameuse or Pomme de Niege, on account of its comparative exemption from the unfortunate tendency of that old favorite to scab and crack. When both are perfect the "Beauty" (an exceedingly appropriate suffix) has all the delicious and attractive qualities of the Fameuse, only a little hightened. It has evidently come to stay.

CHERRIES.

This season has brought out a new sweet cherry, which, though it originated a number of years since in Lenawee County, Michigan, has only now been introduced to the notice of the public.

It belongs to the class of Bigarreaus; possessing the high, piquant flavor, as well as the firmness of texture of that old favorite. The fruit will probably prove slightly smaller in size and, aside from its fine quality, it is said by the originator to be exempt from the liability to crack and decay in rainy weather—a defect so nearly fatal to the profitableness of many of our finest cherries. The tree is said to be of fine, upright, spreading habit, and very hardy. Should experience confirm these commendations, I trust the variety will be found useful and valuable, notwithstanding the many excellent varieties with which it will be compelled to compete.

GRAPES.

A year since I was surprised at the result of an experiment by Mr. W. Fulkerson, of Clinton County, with the seeds of a single bunch of Wilder (Rogers's No. 24,) grape; not so much on account of the high quality of the resultant varieties, as for the number of seedlings of fair quality.

Another of our prominent fruit growers, along with his experiments with seedling peaches, as heretofore noticed, has also directed his attention to the grape, by planting a quantity of seeds of Salem (Rogers's No. 22). Of somewhat less than one hundred plants, derived from this planting, a considerable number have now borne two years, and others only one year. Of these the originator has selected five white varieties and five other colors, several of them black; all of which he regards as highly promising and better in quality than the parent; while one or more are thought to be of finer quality than Delaware, besides being of larger size and the plants more vigorous. The plants cannot yet be supposed to have developed their full quality, or the ultimate characteristics of the bunch; hence, while I regard them as eminently promising, I suspend judgment respecting their ultimate value.

What most surprises me is that these two Rogers's Hybrids should possess such fixity of quality and constitution, as to so wonderfully excel our presumably more obstinate *pure natives* in keeping up the general character of their progeny, and transmitting their unusual, and presumably fugitive, peculiarities to them. I, at least, will feel a peculiar interest in watching and noting the outcome of these experiments, and I look to them in connexion and comparison with those of Ricketts, and in contrast with the Prentiss, Niagara, Duchess, Brighton, and the Moore Seedlings, for a more full settlement of the so long doubtful question, how far it shall prove practicable to interweave and blend the desirable qualities of *Vitis vinifera* with those of any or all our natives without too great a sacrifice of vigor and adaptation to sustain the inflictions of our, in some respects, more trying climate.

PLUMS.

Michigan, especially Northern Michigan, is believed to possess a climate more than usually favorable to the growth and perfection of the plum, whether we consider the healthfulness of the tree, or the beauty, quantity and quality of the fruit. The past season, however, has been exceptional in this respect, since, even at the extreme north, the weather at the time of ripening was such as to occasion extensive loss of crop. That such weather, however, will rarely occur, we may reasonably anticipate. Little attention is bestowed upon the plum in Southern Michigan, mainly on account of the depredations of the curculio. Still we are indebted to Lenawee County for a new variety—a medium-sized purple plum, which, so far, proves nearly or quite proof against the rotting of the fruit, and although not specially attractive in appearance, is said to be a good grower, hardy and productive. In quality it will rank as "very good."

STRAWBERRIES.

In small fruits little advance has been made among Michigan growers, except in strawberries. Even with these the really valuable seem to attract little attention until taken up and brought to notice by more progressive growers abroad. As an illustration, the Bidwell even in the locality where it originated, failed to command attention, till its real merits were discovered by Eastern growers, since which it seems to be coming to the front. So far as I know, the Marvin and the Shirts, both highly promising new varieties, are largely indebted to growers outside of this State for even their present standing at home.

THE FULTON PEAR.

When I find myself in a city my first visits are to the fruit stands and markets. The last week of October I was in Portland, Maine, and my eye was soon attracted by trays of beautiful pears, considerably larger than the Seckel, remarkably uniform, as though all from the same mold, of a bright cinnamon russet in color, and very spicy in scent. The flavor on eating did not disappoint the expectations raised by these preliminaries. The dealer called them Fulton pears, said they were a native of that vicinity, abundantly produced and very popular. The price was ten cents a dozen, with big Duchesses alongside selling at eight and ten cents each. I let the Duchesses alone and filled a large pocket with the Fultons, filling its mate on the other side of my overcoat with Garden Royal apples.

Returned home I now consulted my Downing and found the following description, with an outline perfectly corresponding in size and form to the Fulton as I saw them:

"This American pear is a native of Maine, and is a seedling from the farm of Mrs. Fulton, of Topsham, in that State. It is very hardy, and bears every year abundantly. Tree moderately vigorous. Young shoots rather slender, and yellowish reddish brown. Fruit below medium size, roundish, flattened. Skin at first entirely gray russet in color, but at maturity of a dark cinnamon russet. Flesh half buttery, moderately juicy with a sprightly, agreeable flavor. Very good, October and November."

A word of the Garden Royal apple. I have not often noticed it elsewhere, but it was plentiful on all the fruit stalls in Portland, and advertised by large placards. It is an excellent and very beautiful apple of its season. It is figured in Downing, rather below its real size as grown in Maine. It originated in Sudberry, Mass. The tree is very productive, fruit tender, juicy, rich, mild subacid, aromatic, best. Season September, but in Maine good until November. The Fulton pear and Garden Royal apple are noble and equal companions in the aristocracy of fruits. T. H. HOSKINS, M. D.

Field Crops.

CULTIVATION OF THE CRANBERRY.

A. B. ALLEN.

THE cranberry being anti-scorbutic, makes it, perhaps, the most healthful of all our fruits; and as it can be cooked in many different ways, it becomes one of the greatest luxuries of the table.

Soil for Cultivation.

The cranberry can be grown on a great variety of soils, but those which yield best are, a deep, rich muck or peat; the bottoms of old mill ponds after the water is drawn off; and black sand with a clay subsoil. The berry is so liable now to be attacked by many destructive insects, and injured by various diseases, that the best soils only will yield sufficient to render it a good, paying, marketable crop. For home consumption poorer soils may be cultivated to a moderate extent by our farmers, as it makes little difference to them as to the profit of the yield of what they only want for family use.

Location.

The place chosen to make a cranberry meadow should be lined with abundant banks of clear, coarse sand, have fall enough to drain it well, and springs of water sufficient to overflow it when required. One or more straight ditches, according to the breadth of the land, must first be cut through its whole length two feet deep, and three to five feet wide, or broad and deep enough to carry off all the water readily. Narrow ditches about one foot deep are then cut from 30 to 50 feet apart, according to necessity, at right angles to the mains in order to prevent any water from standing on the meadow, as it is essential to keep this in continued movement from the upper down to the lower end of the meadow. If it be a swamp with trees, these are cut down, the timber and brush removed, the stumps cut below the surface, all shrubs and small roots grubbed up, and the land perfectly leveled. It is then generally sanded from two to eight inches deep, or as an extreme, 15 inches, according to the richness and depth of the muck. If a turfed meadow is selected, this is cut into blocks about a foot square, and carried off on the dry land, packed in heaps, and, when well rotted, returned and spread on the meadow whence it was removed; or it is turned over flat and left, remaining to decompose on the surface. A savanna or dry meadow found clear of all obstructions, may be plowed. In doing this a sharp, extra-wide share must be used, so as to turn the sods flat over, and not have the furrow lapped in the slightest degree. After this, level the surface and sand it as thick as required.

Dam for Overflowing.

A dam is now made at the foot of the meadow with a flume and gate for the purpose of shutting down to let the water rise to overflow the cranberry vines, and again opening to draw off the water when required. This dam can be formed of the most suitable and nearest

material to be had, and must be made strong enough to resist any possible pressure that can be brought against it by an extra rise of the water from rain or melted snow.

Planting the Vines.

The best time for this is in early April on to the middle of June, according to latitude and climate. Some plant later in Summer and also in early Autumn, but there may be a little risk in doing so. Make drills about three feet apart, and set three to six cuttings four inches deep every twelve inches in these. Press the ground solidly about them and let the tops lie slanting near the ground. This enables them to root with more certainty, and to sucker better than when left standing perpendicularly. On meadows of thin soil the vines may sometimes be simply dropped on the surface, then covered with an inch or two of sand. This is the most expeditious way of planting, but not the most certain for taking root, and making a good subsequent growth. As berries of the largest size sell the most readily and fetch the highest price, be careful in selecting vines for planting to obtain such as produce these most abundantly.

Cultivation.

All weeds and grass must be kept out from among the cranberries while the vines are growing, and as long as they continue bearing; for if left to grow, these greatly lessen production, and ultimately take complete possession of the crop. A hoe may be used the first year for destroying weeds, but after this the vines cover the ground so thickly, that a hand-fork and trowel are the only proper implements for this purpose; and with these the ground, being quite loose, the work is got over rapidly. Cutting off the heads of weeds just as they are coming into blossom sometimes destroys them in the course of two or three years, but pulling them out by the roots is much the most effectual way to get rid of them.

Time of Bearing.

This begins abundantly in three to four years after planting, the time being dependent upon the richness of the soil and the care bestowed on the vines. If the fruit is picked sooner it is liable to injure the subsequent crops.

Fertilizers.

Great caution must be exercised in the use of these, as they have often done more harm than good. The only safe way is to experiment with a few square rods of the berries for two or three seasons, and note the result. If favorable, then fertilize a larger breadth; if not, cease applying them. The best fertilizer yet tried and the most certain to work well, is a sprinkling of fresh, rich muck well pulverized and mixed with sand.

Flooding.

This should be done the first Winter after planting. The water is then let on, according to the climate, from early to late in November and not taken off till from early in April to the first week in June. It must cover the meadow from two to four feet deep. It is again sometimes let on to a shallow depth in the Summer to destroy certain insects and weeds. Great care, however, must be exercised in this last flooding, lest the water should then do more injury than good.

Picking.

This is done in the latter part of September, or early in October, according to climate. A rake and other lately invented implements are occasionally used, but these are more or less objectionable on account of tearing the vines or injuring the fruit. As there are plenty of women and children, their hands are still the most suitable of all things for this purpose. They pick as rapidly if not more so than men, and as their labor is cheap, it still continues the best means of gathering the crop.

Care of the Fruit.

After picking, the only care necessary of the fruit is to handle it in such a manner as to prevent bruising. Pack in moderate-sized, well-ventilated boxes, and store in cool, well-ventilated rooms into which neither sun nor frost penetrates, till sent to market.

Yield.

This is according to soil, cultivation, the season and absence or attacks of disease and insects. The crop may vary from a few bushels up to one thousand per acre, but a fair average is 100 to 150 bushels. Anything less than the two latter yields at the present low prices of berries, would not pay a fair interest on the cost of production.

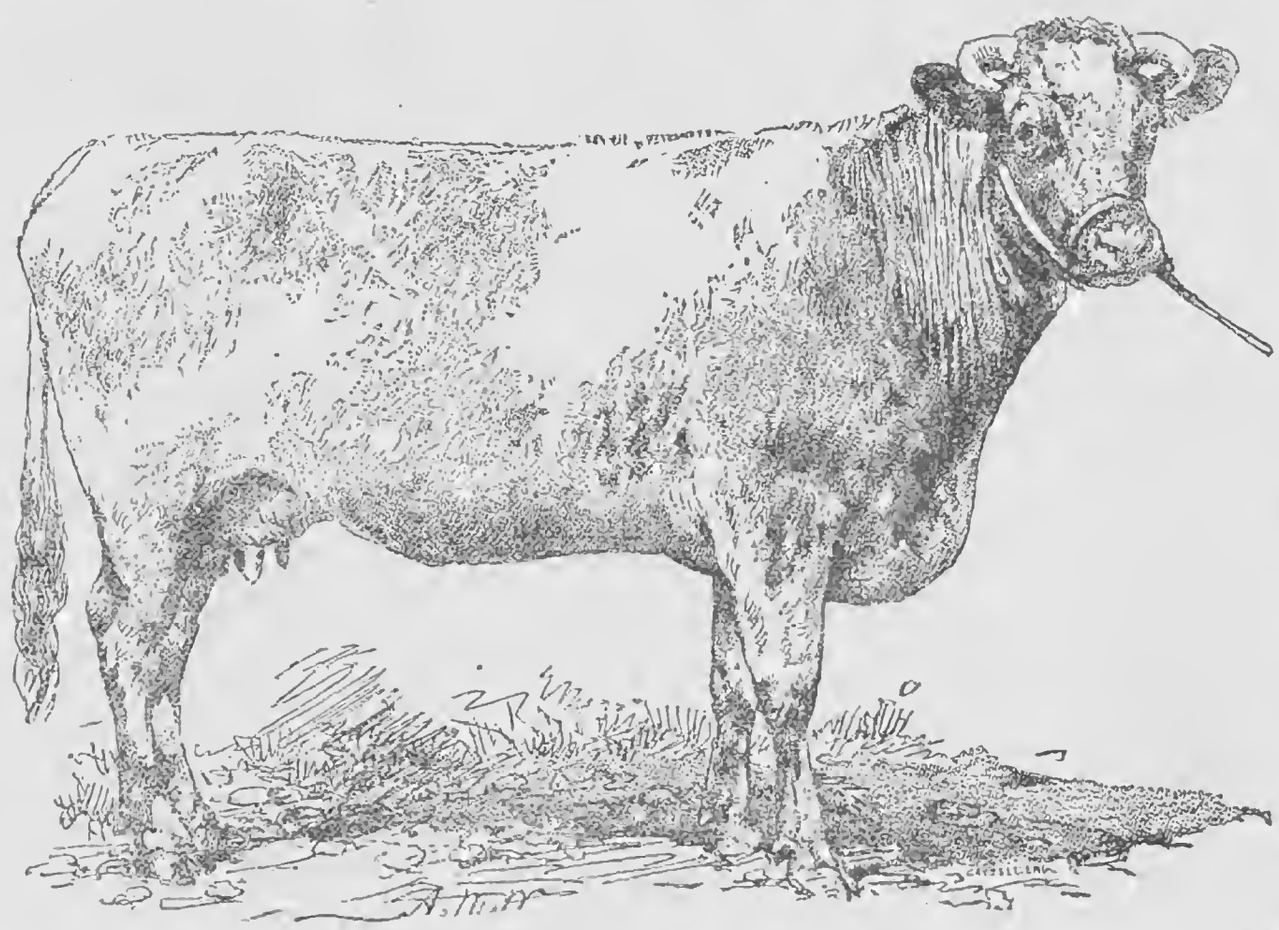
Expense of Making Meadows.

This foots up usually from $100 to $300 per acre; but some cost considerably less or more according to circumstances. If a swamp be well wooded with valuable timber trees, the sale of these may pay the whole expense of turning it into a cranberry meadow. If no wood of value is upon it, then the expense would necessarily be large.

General Observations.

The above is intended as merely a brief account of cranberry culture; to go into it fully in detail would require the writing of a considerable volume. But from the study even of this no one could be certain of making a good meadow and successfully managing it thereafter. It requires a long experience to accomplish all this properly, and to those who think of embarking in the business it will be advisable to engage a thoroughly reliable, practical man to assist them till they become fully acquainted with all the details.

It will be seen now that the crop is precarious on account of being subject to attacks of numerous injurious insects and diseases of various kinds. Some have also been badly injured from fires running over them, caught from burning forests in the Spring. Added to this, the expense of storing and marketing is considerable, and the price often low. All these matters should be taken into serious consideration before embarking in the making or purchasing of a cranberry meadow with a view to its subsequent cultivation. It would be advisable in any event to commence with only a few acres; if successful, gradually increase; if not, then give it up, pocket the loss resignedly and go into something more reliable and profitable.



SHORT HORN COW, "LADY WELLESLEY SECOND."—FIG. 402.

The Herdsman.

OUR ANIMAL PORTRAITS.

Short-horn Cow "Lady Wellesley Second."

The accompanying cut, redrawn from the Agricultural Gazette, is a fine representation of the Short-horn cow Lady Wellesley 2d, belonging to the Wolverton branch of the celebrated Princess tribe, which have been bred in this country for several generations. Her sire was the pure "Duchess" bull Duke of Geneva 9th, and her dam traces to the same cow as Lord Bective's beautiful Lady Sale of Putney. She was bred by Mr. E. H. Cheney, from whom she was purchased by Mr. L. Rawstone, of Holton Hall, England. The Princess tribe has always borne a high reputation for its fecundity and deep-milking power, as well as for its beauty, and is to-day second to no Short-horn tribe in popularity.

NOTES BY A STOCKMAN.

If the man who grows two blades of grass where but one grew before, is a public benefactor, he who produces two pounds of meat where but one was raised before deserves equal credit. Among the useful men of this sort is my friend Col. F. D. Curtis, of Charlton, N. Y., who first introduced the Victoria breed of swine. The Colonel deserves the credit of being the originator of the idea of herd records for these useful animals, and was the leader in the movement for holding the first convention of swine breeders that was ever held in the world. This convention fixed the scale of points and the standard of excellence of the established breeds of swine. I well remember how several years ago Col. Curtis, myself and another constituted ourselves the committee who supervised the birth of this new idea and who helped it to stand upon its feet. But the whole credit is due to the Colonel whose faith was strong while ours was weak. The strong will and determination led to success, and the fruits of that movement have been exceedingly beneficial to the pork interest; for it gave a vast incentive to improved breeding and the results have undoubtedly been to increase the average weight in a certain period; to improve the quality; to decrease the proportion of offal, and consequently to cheapen the product and increase the demand for it.

The Victoria breed of swine is an improved Suffolk and an improved Yorkshire at the same time. It has the fineness of the Suffolk without its tenderness and its excessive tendency to fat, and the size and fleshiness of the Yorkshire without its coarseness. Its skin is thin and fine; the hair is fine and abundant; it has length of body, with depth of side and shoulder and an excellent ham—what more can be wanted in a pig? At the recent Fat Cattle Show some Victorias from Indiana were exhibited which are reported to have averaged 360 pounds of weight for pigs from six to ten months old. The originator of a breed of pigs that can reach such a profitable weight at so early an age, has certainly "done the State some service," and should be warmly congratulated on his victory as well as on his Victorias.

The third annual Fat Cattle Show of Chicago has just been held. This is purely a Chicago institution and is jealously so considered by that live city. It is a similar affair to the English Smithfield Butcher Cattle show and this Western association thinks its modern effort surpasses that time-honored one of England. Perhaps it does. Why not? We have better Short-horns here than our distant competitors; otherwise our cattle would not be in demand over the water at higher prices than can be obtained there for native cattle; and American beef would not be sold under the false guise of "the best home-fed." Certainly this Chicago cattle show is an educational institution and instructive as well as curious. The catalogue of entries contains in three adjoining columns the age in days, the weight and the average daily growth. At a glance one can see how much loss and how much gain each animal has made.

The youngest beef is the most profitable; it is certainly the most palatable. The farmer who fats and slaughters a two-year-old steer or heifer has some choice, tender meat at the lowest possible cost. If he fed the steer till four years old the meat would cost 50 per cent. more. Let us consider the following figures taken from the aforesaid catalogue:

Age in days.	Weight.	Gain per day from birth.
688	1,880	2.73 lbs.
585	1,490	2.54 lbs.
572	1,400	2.44 lbs.
721	1,590	2.20 lbs.
940	1,975	2.10 lbs.
1,197	2,005	1.67 lbs.
2,692	1,690	0.62 lbs.
2,765	3,125	1.13 lbs.
4,225	1,170	0.40 lbs.
4,256	1,455	0.34 lbs.

Here is a wonderful difference. Part of it is evidently due to the animal itself, but without any doubt the 2,005-pound animal would have been more profitable a year earlier than at the end of 1,197 days. The enormous weight of 3,125 pounds even is produced at a comparative loss, while the 11-year-old beasts had "eaten their heads off" many years before. These were cows and, of course, may have paid their way as breeders, but it exemplifies the principle that after two years a beef animal loses money.

It is the same with sheep and pigs. A fat wether at 20 months and a pig that is slaughtered before it has been fed over one Winter, are more profitable at these ages than if longer kept. This being plainly the fact, how important it is that those interested in feeding stock of any kind should keep only those that mature early and are rapid feeders.

The fact is that there is much to learn from agricultural fairs and exhibitions of all kinds. To the observant man there is presented an epitome of the results of the best work of hundreds of enterprising, thoughtful and capable men. "In the multitude of counsellors there is wisdom," and the more a man sees of the successful work of other men, nay, the more he sees of the failures of unsuccessful ones, the more he may learn to guide himself in his own work. The greatest result of this fat cattle show is the plain proof given of the value of well-bred stock. The best animal and the first on the above list is a grade Short-horn. So are the second and third; the fourth is a pure-bred. Grades are always better beef animals than the pure-bred; this is characteristic of high-bred animals and their crosses. But the heavier grades can only be produced through the pure-breds. These are the material to be used. After the full experience of many years a farmer who goes on breeding from scrubs is simply throwing away opportunities of making the most of his labor.

A Western Opinion of Short-horns and Percherons.

An esteemed contributor writing to us from Illinois, says:—The Herefords are coming to the front, but the Short-horn interest is so powerful that the Hereford breeders do not get a fair chance, and the Short-horn papers cannot be made to acknowledge the fact until long after it has been fully accepted by the people. In a word, I find most agricultural journals are one to two years behind the times, and when one writes he is compelled to write what the facts were one or two years ago and not what they are at present. For example, the Percheron horses have been tried and found wanting, and they are going out of fashion faster than they came into it; yet who dares to say so plainly and to say that all or nearly all they are good for is for slow work in a cool climate. No doubt the Clydesdales are an improvement. I should not be surprised if we found the Russian horse, which originated on the steppes and under the intense cold of Central Asia, the stock we want for a climate which is tropical in Summer, and arctic in Winter.

Dairy Husbandry.

THE SWARTZ OR SWEEDISH SYSTEM OF CREAMING.

All the late methods of cream-raising by the use either of ice-water or cold air are based on the system discovered some years ago by Mr. Swartz, of Hofgarden, near Wadstena, Sweeden, and which is known either as the Sweedish or Swartz system. The main point of this system is, that the milk is set in ice-water to cream. It is to the employment of this method that is due the high price obtainable for Sweedish and Danish butter in the English market, and its advantages have set inventors in this and other countries to work in order to devise the most convenient and economical way of embodying the cardinal point of the system—the cooling of the milk rapidly by the use of ice. In Sweeden the milk is carried to the factories every night and morning immediately after milking, from a circuit of not more than a mile and a half around each factory. It is there measured, and at the end of each month the farmer is paid a stipulated price for the quantity he has delivered.

The Cooling Tanks.—For cooling or "setting" the milk, square or oval tanks or cisterns are used, the size depending on the requirements of each dairy. Usually they are not over nine feet in length by three in breadth, inside measurement, with a depth of six inches. Such a cistern is large enough to cool about 115 imperial gallons of milk. It is made of two-inch plank and is, of course, water-tight. The milk-pails are usually placed on a large grate fastened with wooden wedges inside the tank. Figure 404 shows a top view of a tank and the arrangement of the milk-cans in it; while in figure 405 a sectional view is given, affording an idea of the depth and showing the inlet and outlet water-pipes. Experiments show that the more quickly the milk is cooled, the more completely does the cream separate from it. To reduce the temperature quickly, therefore, ice is broken into small pieces and put in the water surrounding the pails in the tank. From 40° to 45° Fah. is found, as a rule, to be quite low enough, even in Summer, and in Winter this temperature is easily maintained by the use of a little snow instead of ice. If the temperature can be reduced to 42° by a flow of

spring water, no ice is needed, but as the temperature of spring water is usually that of the It seldom is low enough in Summer.

THE MILK CAN.—In order to promote the apid cooling of the milk, the pails for setting it are made small and oblong, because this shape has been found the most effective to this end besides permitting the cream to be easily skimmed off the milk. The cans are made of iron or steel-plate completely tinned inside and out. They are usually about 20 to 24 inches deep, and hold from two to three gallons each, the milk generally rising to within two or three inches of the top. One of the cans is represented at figure 406. Originally when the milk was cooled by spring water these cans had a diameter of 18 inches and a depth of 24, but since ice has been used almost exclusively, their size has been decreased. Figure 407 represents a milk-strainer which fits on top of the can and through which the milk is strained as soon as convenient after having been drawn from the cow. Figure 408 shows a lid which covers the can in hot weather or whenever it is desirable to keep the milk from contact with the outer air. Two little funnels, one at each end, permit the escape of the gases and odors from the milk in the early stages of cooling. In hot weather the water in the tank rises to the same hight as the milk in the cans, so that the cream as well as the milk is kept quite cool and sweet; but in cold weather the surface of the milk is a few inches higher than that of the water.

WHEN THE CREAM RISES.—In Summer the temperature of the cooling-room is kept as low as possible, but in Winter it is never allowed to fall below 50° Fah., if possible. The time required for the cream to rise depends on the temperature of the milk, of the water in the tank and of the room. If the temperature of the ice-water at the time of setting the milk does not exceed 38° Fah.—which is as low as it ever should be—and does not rise higher during the cooling, the cream may be skimmed off in from 12 to 18 hours, but it is safer to let it stand 24 hours, as at that low temperature the cream rises rapidly, but is thin and requires a longer time to become firm.

THE CREAM should be put into an ice-water bath immediately it is skimmed, and ought not to be kept more than two days in Summer and three days in Winter before it is churned, otherwise it will become bitter and acquire a bad taste which it will impart to the butter. The cream raised by this method is thinner than that which rises in flat vessels in comparatively warm rooms; but there is more of it, so that the amount of butter obtained from a given quantity of milk is about the same in each case; while that secured by this system is of finer quality; the skim-milk, too, is better, while the expense for vessels and buildings is considerably smaller.

BUTTER MAKING.—A temperature of 57° to 60° Fah. has been found the best for making the butter, something, of course, depending on the quality of the cream, the season, etc. The churn commonly used is driven by water or steam power, and consists of a barrel resting on a frame and vertically movable on trunions. In it a churn-staff armed with two wings rotates at a speed of 120 to 180 revolutions, according to the quantity of cream in the churn, which usually contains from 17 to 60 gallons. The butter comes in about 45 minutes, and is separated from the buttermilk first by a strainer and then by hand work. It is then tested by the dairymaid and divided into three classes, after which it is weighed, when the particulars are entered in the factory journal. Before churning some fluid annatto is added in quantity suitable to the different seasons, and the varying tastes of the markets for which the butter is intended. The assorted lumps of butter are carefully worked together one after another, and from two to five per cent. of pure, fine, dry salt is added, the quantity here, too, depending on the taste of the market to which the product is to be sent. From a quarter to a half per cent. of sugar is also mixed in. It is then packed in beech-wood casks holding from 60 to 100 pounds each, and which have previously been saturated with brine, the name of the dairy having been pressed upon the top of the butter, which is then covered with a piece of gauze on which a little salt is scattered. If the butter is of first quality the name of the dairy and the weight of the butter are painted on the cask, but if this contains second-class butter the initials of the dairy alone are put on it, while third-class butter is sold at once or returned to the deliverers of the milk.

Self-turning Cheese Shelves.

Not the least troublesome duty in farm dairies where cheese is made, is that of turning the cheeses. In factories this is easily accomplished by the use of self-turning cheese shelves, a specimen of which is here illustrated, with the suggestion that its introduction more generally into farm dairies would be a welcome saving of labor to the women of the family upon whom usually devolves the duty of turning the cheeses. In each frame there are three or more "sets" of shelves, each containing three rows of cheese. Each of these sets is turned separately and easily in about the time it would take to turn a single cheese by hand, with the advantage of allowing each cheese to rest on a dry spot at every

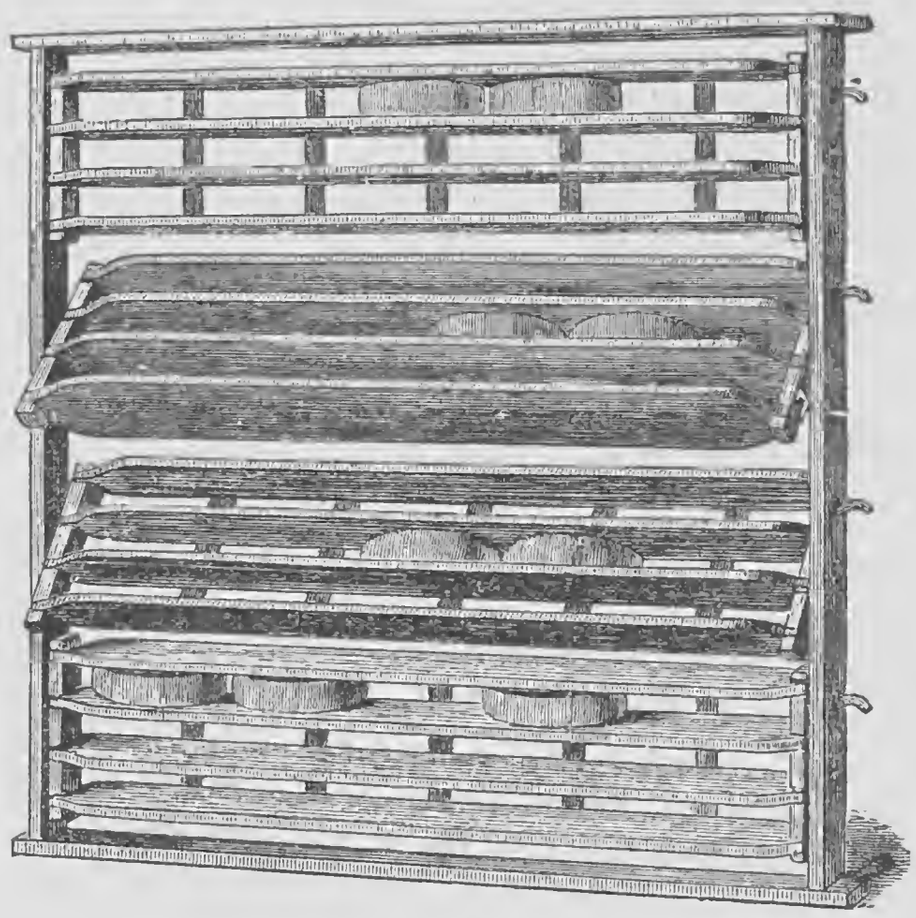


FIG. 403.

turning. The sets are held in position by a catch and carry-latch in the end, and strips of wood at the back prevent the cheese from slipping off. The cut fig. 403 fully explains the nature of this excellent labor-saving contrivance.

The Poultry Yard.

MANAGING AN INCUBATOR.

L. S. HARDIN.

FURTHER experience with my incubator has led me to change or modify some of my previous statements. That others may avoid some of the errors into which I have fallen, it will be well to call attention to them. The instructions that came with my machine advised me to put two pounds of sulphate of zinc into the battery jar. This I found a great nuisance, as it covered the jar and all the apparatus with which it came into contact, with a white crust, and was so disagreeable to the hands that I would neglect cleaning the zinc to avoid it. An expert in telegraph machinery told me that this sulphate of zinc did more harm than good, and was only used for starting the battery. Acting upon his suggestion, I dissolved two handfuls of bluestone in water, emptied and cleaned the jar and zincs, refilled with fresh water and the dissolved bluestone, put back the copper and zincs, and all went on better than before. I have had great trouble with the glass tube in the gauge because it gets foul with dust and prevents the mercury from working smoothly. Cleaning it with a straw is a poor device. I now use a short piece of very fine wire and wrap the end of it with the finest sewing silk. This makes an admirable swab to clean the tube with. On replacing the wire in the tube, I lay a piece of cotton cloth on top of the tube and push the wire through it; this excludes the dust and causes the gauge to work much better.

In hatching I am now getting out about 75 per cent. of the fertile eggs, but at this time of year, when the hens and cocks are molting, only about two-thirds of the eggs produced in ordinary flocks are fertile, and as fresh country eggs are selling for 35 cents a dozen at the store, the egg account is a pretty expensive item. It is very hard to procure eggs at this season of the year, no matter what you are willing to pay for them, as hens have nearly stopped laying. I have engaged all the eggs from several flocks, ranging in numbers from 60 to nearly 100, and find it impossible to get, on an average, more than a dozen eggs a day, which is below the capacity of my machine; for this I can utilize about 150 eggs a week. By offering farmers a cent a dozen more than hucksters pay, all their spare eggs can be engaged. Next season I hope to get many of them to use cocks of the larger breeds, so as to make early broilers.

I now have in the neighborhood of 100 chicks from a few hours to four weeks old, and some I procured that were hatched by an incubator at Coney Island, are over three months old, and a finer lot all through I never saw. The percentage of loss is very small. Those that have broken the shells and come out strong have grown right along, and I have not lost one of them. In every batch of eggs there are always two or three chicks that cannot get out of the shells. These I help out and fuss along with them. Nearly all such die about the third day, and those that live are crippled so that it does not pay to work with them, except for the experience one acquires in handling them.

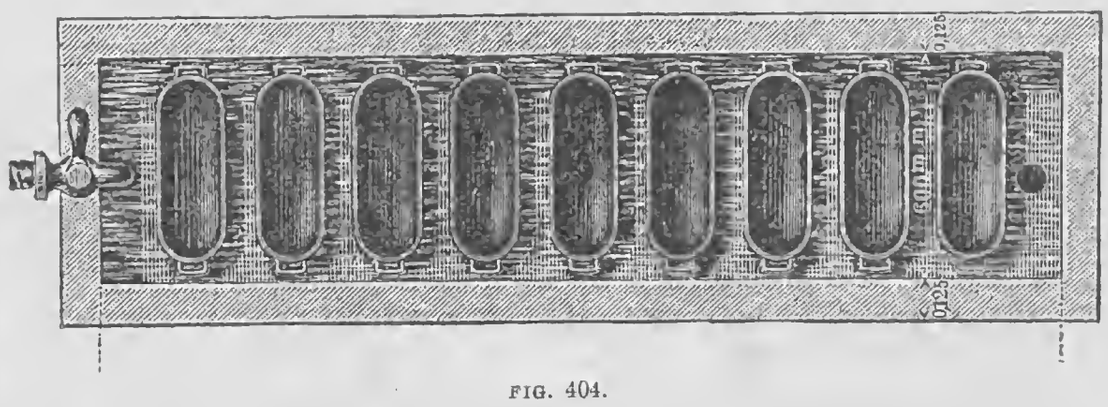

FIG. 404.

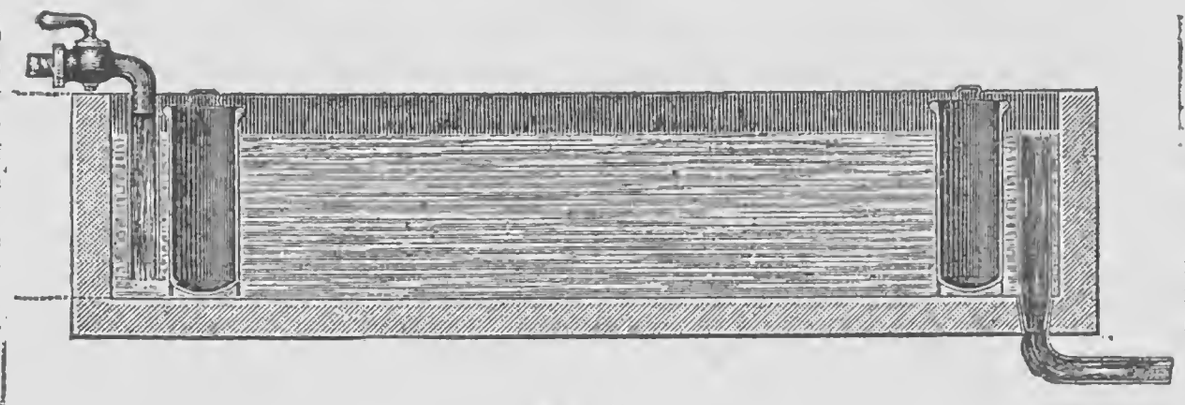

FIG. 405.

I have learned to "cram" a little chick to perfection, for I find that the instant anything troubles a chick it ceases to eat and, of course, soon dies unless forced to eat.

It is astonishing how interested every member of the family has become in the incubator since the brooders have begun to be filled up with little chicks. Even the neighbors pay daily visits and cannot get over their amazement at this singular undertaking. Presents for the little chicks come in so rapidly that I have not bought any feed to speak of, though, of course, this state of affairs will not last forever. The little things are handled so much that they are very tame and grow amazingly and eat enormously. As Wright says, they are the hungriest of God's creatures, and, unless sick, have wonderful appetites. I am experimenting with different kinds of feed—cornmeal, coarse and fine, oat-meal, bran-bread, wheat, worms, meat, cabbages, potatoes and, in fact, everything that offers a fair chance to be a good and economical feed. Of the effect of these I will be able to speak more wisely after further experience. The chicks need constant attention, at least they do now, as we have not got fully settled down to a routine with them, but we are rapidly working in that direction.

FEEDING CHICKENS.

THERE is no point in the chicken business about which there is a greater diversity of opinion and practice, and about which there should be greater unanimity of practice than that of feeding poultry. This applies particularly to young chicks the first two days and the first two weeks. We will give a small bill of fare. Some people will insist upon it that other

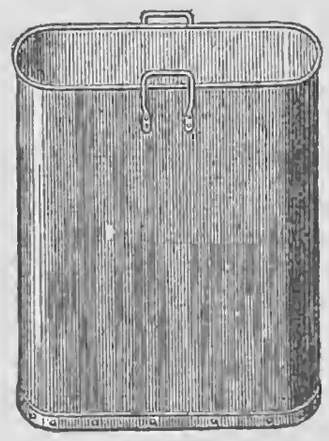

FIG. 406.

things are better while the price or trouble of procuring such food may deter others from following our advice. But this at least is a good list of feed and if better can be had it certainly should be. The first meal should be bread crumbs and boiled yelk of eggs mixed in equal parts. One yelk will feed 12 chicks. First week, oat-meal moistened with milk morning and until night, when cracked corn should be given. This feed the first week or ten days

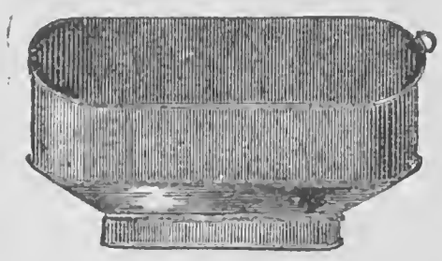

FIG. 407.

will give chicks a good start, and as they do not eat much at this time the expense will not be great. A little minced meat the first week is excellent. They should be fed every two or three hours during this week, and no food should be left in the coop or left over to sour. If too much has been made up, feed it to the older chickens, as it will give the little ones the scours. We know this advice is not exactly seasonable, but it naturally precedes the regime for older fowls.

FIG. 408.

After the first week the morning meal should be either of corn, buckwheat, barley or oats mixed one half in bulk with wheat bran. Mix with milk if you have it, if not, with water, only until it crumbles; do not make a slop of it. At noon the feed should consist of boiled potatoes mashed, a little hashed meat, uncooked, and not too much of it, with cabbage leaves, turnips or something green and fresh. At night whole corn and a little wheat if convenient. Wheat screenings are delusive and more costly than good whole wheat.

The following is an excellent list to choose from.

LIST OF FOODS.—Grains: Barley, buckwheat, hemp, linseed, millet, maize, oats, wheat.

Meals.—Barley-meal, Indian corn-meal, linseed, oatmeal, sharps or pollards.

Aids in Feeding.—Bone-dust, rice, oyster shell (prepared), ground barleycorns, salt, meat, house-scraps, bones, liver, fat, fish, hay seeds, sunflower seeds, etc.; green food of all sorts.

If feeding is carried out with judgment, and changes are rung upon the foods named above, the

poultry will be kept in health, and will produce chicks with good vigorous constitutions.

Of special feeds some precaution must be taken; for instance, many feed bone meal to strengthen the fowls. This is a good idea; but it should not be given to laying hens or fowls just before killing, as it gives a bad taste to the eggs and flesh. There should be an interval of at least one week between feeding bone meal, onions, fish or other strong food and laying and killing time.

We have often been amused with the shifts lazy people make for feeding fowls; one of these is the inevitable "self-feeder." Well we remember when they were first introduced and then we often saw them well filled. Indeed, if we remember rightly, we have seen corn put in them several times a day, although they would hold two weeks' feed; but then the thing was a novelty, and we liked to see it work. Nowadays go on any rich man's farm and you see these empty perpetual feeders standing around weather-beaten and forlorn, while the poor fowls after a full feast for a month or so must go to scratching again. The trouble it takes to shell corn enough to fill one of these boxes is of course the same as it would be to supply the chickens a little every day, while the fact that the mind is not charged with its attendance causes it to be forgotten at the right time, so that chickens would actually starve to death if dependent upon it. The safest and by far the best plan, and as little trouble as any, is to give a moderate feed night and morning, which soon becomes a habit—harder to break than to perform.

Breeding for Feather to Exclusion of Quality.

What is called "hen fever" is a kind of passion that takes possession of a person or community for certain kinds or breeds of fowls. The public poultry exhibitions that have grown out of this rage that has been in existence now for many years, tend to keep it alive, and while it may be of great service to the community at large by the introduction of new foreign or home-bred breeds of poultry that excel all others we now enjoy, there is one thing certain, and that is, it leads breeders to pursue false standards of excellence, and as these standards are generally chosen for their prominence, as color of feather or weight of flesh—points that are easily determined and boasted of—they are certain to be pursued to the injury if not to the destruction of the more valuable but more subtle characteristics of egg laying and quality of flesh. The standard of excellence published by the American Poultry Association sets the feather markings for all the breeds, while it requires no virtue of egg laying or table quality, which are the only genuine purposes for which poultry are designed. We think it time poultry journals should begin to devise some plan for retaining these useful qualities in the pedigreed birds as well as in our common barn-yard fowls.

GEESE.

ON looking over the article in the RURAL of October 2d, on this subject, I observe that the writer says the white China goose shows a "faint brown stripe" down the back of the neck. Can such be *pure-bred?* I think not. I have kept some of this breed and known others for upwards of 30 years past, and I never saw a brown stripe on the back of their necks, or a feather of any kind on them save a pure, snowy white.

As the writer remarks, they are quite swan-like in their appearance, and I may add, for graceful form, elegance of movement and beauty, no water fowl excels them. They also lay many more eggs than the larger breeds. Taking Spring and Autumn together, I have gathered upwards of 60 eggs from each goose in my flock. The small, gray China, with a dark stripe down the back of the neck, lays equally well, and is a graceful, beautiful bird.

F.

The Horseman.

A CONVENIENT HORSE-SHOE.

AMONG the numerous horse-shoes lately devised in this and other countries, that invention in England by Mr. Joseph Offord seems worthy of special notice. Its object is to fit the hoof with a movable but firm covering which can be readily adjusted to fit every kind of work and road, so that, like its master, the horse may own several sets of shoes for different occasions. The device consists in having one or more perfectly wedge-shaped holes in the side and close to the edge of each shoe—fig. 409 in which triangular cogs, or wedges, are inserted. These are fastened by the fangs being brought, without touching the hoof, to the outside of the shoe, over which they are clenched with a small hammer. The cogs do not penetrate the hoof, and there is no risk of hurting the horse. The holes, being wedge-shaped, cannot fill up with stones or dirt, and

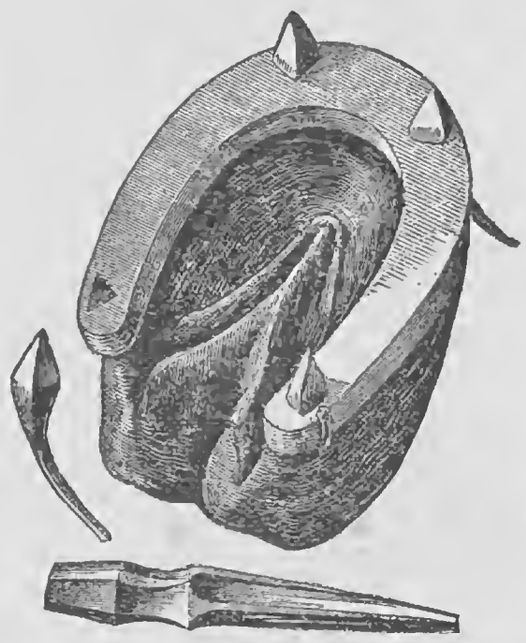

FIG. 409.

the fangs being malleable, the wedges are easily removed or inserted at pleasure. It is necessary, however, to get the holes punched in the shoes before the horse is shod, and for the coachman to be provided with a supply of these patent cogs to insure safety on any road in frost or on wood.

As many are accustomed to use a cog which screws into the shoe, Mr. Offord has prepared a steel wedge-shaped one (fig. 410) for this purpose. The screw cogs are, of course, more expensive. In using them the shoe has to be drilled and tapped with one or more holes before the horse is shod. The cogs are inserted

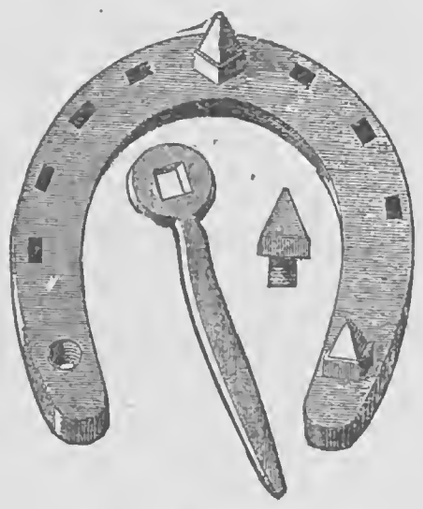

FIG. 410.

into these holes when needed, or removed at pleasure by means of a wrench provided for this purpose. We give two illustrations, reproduced from the Agricultural Gazette, showing both these methods, with the punch, wrench, and dogs, both of which have stood the test of many years' experience, and have given great satisfaction.

Farm Economy.

NEW STEAMING APPARATUS.

THE question is still a mooted one whether it is or is not better to steam feeding stuff. There is no doubt but that some kinds of food, if fed whole, are better cooked or partially cooked before feeding, and to supply this need we notice a newly arranged apparatus for that purpose, an illustration of which is given upon this page, figures 411 and 412, re-engraved from the Agricultural Gazette (England).

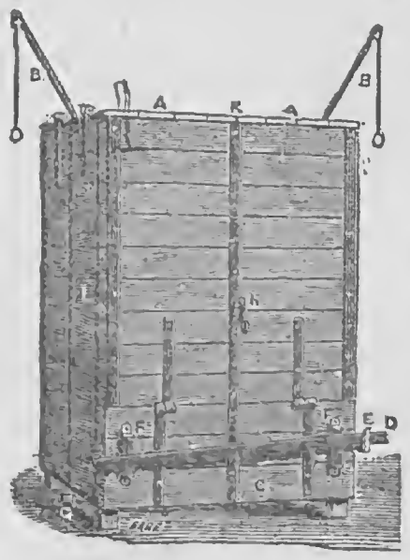

FIG. 411.

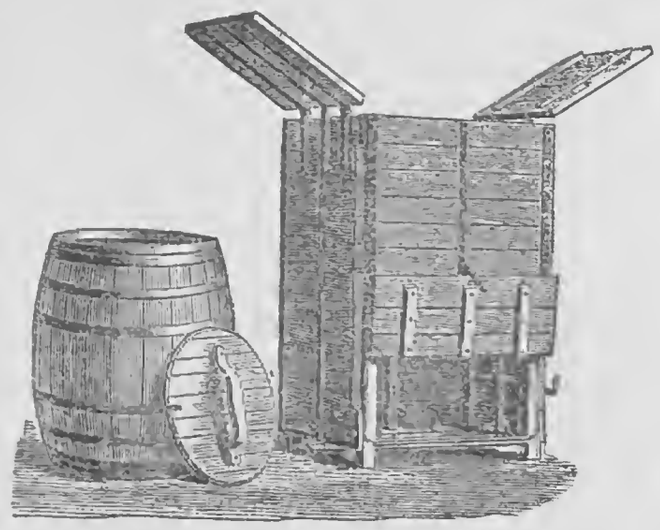

FIG. 412.

The apparatus is constructed of sound, well-seasoned boarding, one and one-quarter inch in thickness, grooved and tongued and bolted to the main frame to prevent warping and to insure strength and durability. In working it, the doors, A A, at top are opened by means of the lever handles, B B, which also answer the purpose of brackets to hold the doors in such a position, when open, as to form a hopper to guide the food into the steamer; the bottom door, C, is lined with India-rubber to make it fit steam-tight, being closed at same time by turning down the hand lever bar, D, and pressing it tightly between the fastener or catch, E, and the wedge-shape rest, F F. The cut fodder, with the meal, etc., intended to be cooked with it, may then be conducted into the apparatus by means of shoots, communicating with the floor above, where the cutter, mill, etc., are placed, or it may be filled by means of a scoop or basket. The top doors are then closed, and being mitred at the point, K, where they meet, they overlap each other and prevent the steam from escaping until the whole contents have been thoroughly cooked. The steam is then turned on by opening a tap connected with pipe G, which conducts the steam to five jets in base of apparatus, by means of which it is distributed throughout the contents, thoroughly cooking them, and also depriving them of any mustiness or ill flavor resulting from weathered hay, spoilt corn, etc., which is a very important and valuable result. The cooked food may afterwards be discharged by opening the door C, which is kept in position by catch H.

Fig. 411 shows apparatus with doors closed, as seen when the steaming process is in operation. Fig. 412 shows apparatus with doors open, as seen when the apparatus is being filled and discharged.

WINTERING STABLE MANURE.

A. B ALLEN.

SOME contend that in order to preserve its fertilizing salts, stable manure should be covered by a roof. If it be pure and without litter of any kind, it is undoubtedly best to have it well sheltered from sun, wind, rain, and snow; but if, on the contrary, the manure abounds with litter, or it is composted with sod, muck or peat, shelter over it is injurious rather than beneficial; for the outside elements are just what it requires to assist in a more rapid decomposition and finer pulverization, which better fit it for application to Spring crops. Rain and snow contain more or less ammonia, according to the season and the frequency of the fall of them; and these, saturating the manure, add considerably to its fertility in the course of a few months. As I have neither sod, peat nor muck, but plenty of coarse marsh hay and straw, I use these lavishly for stable bedding. In addition I also use them in making up manure heaps in the following manner:

Make a bed of one or both of these, a foot thick, on the open ground where most convenient, and daily spread all the stable manure over this bed till it is about four inches thick; then put on the next layer of straw or hay only six inches thick, and over this a layer of only three inches of manure, and thus proceed till the heap is as high as is wanted, finally with a layer of six inches of pure manure without litter in it. This last is necessary to top the heap, in order to make it rot equally in a short time from top to bottom. I usually make the heaps about five feet high, and they soon settle down to four feet.

Leaves of trees may be substituted for hay and straw when obtainable if neither of the latter can be had. Manure thus heaped up never fires, although decomposing rapidly, and none of its salts filter through the bedding; all are retained by the several layers of hay and straw, and assist in rotting them, and making the whole heap a homogeneous mass. The object in having the lowest layer twice as thick as the subsequent ones, is to insure its saving all the salts that may be washed down from the other layers into it. When a quality of manure is wanted richer than the above, we sprinkle fine ground bone dust or meal and guano alternately over each layer as fast as made, in a greater or less quantity as desired.

A fair amount of these mixed with a heap containing ten two-horse wagon loads—say five cords—would be 150 pounds each. This additional fertilizing matter would make the ten wagon loads sufficient to manure half an acre of land—unless excessively poor—for all ordinary crops grown on the farm. Superphosphate may be substituted for bone dust, but it does not usually contain as much of the fertilizing elements for the price as the latter, and is not so reliable. Pure, fine, ground bone dust or flour mixed up with stable manure as above, is as well fitted in a few months to be applied to crops as superphosphate; and fine sifted or manipulated guano, of course, is always ready for immediate application. If the manure is to be applied to potatoes, or for the production of fruits, potash is also an excellent additional fertilizer to be sprinkled on every layer as fast as added to the heap. Some are at the extra labor of tossing over this compost once or twice before using it, but I have found this unnecessary. Forking it down straight from the top to the bottom in loading in to the wagon, and doing the same when unloading it for the crops mixes it sufficiently.

AN Argument for a Protective Tariff, The Farmer's Question: Being a reply to the Cobden Club tract entitled, "The Western Farmer of America." By Jonathan B. Wise. John Wilson & Son, Cambridge, Mass.

RURAL BRIEFLETS.

OUR CORN NUMBER is now under full way. It bids fair to be the best of the Rural Specials. It will be the first number of the new year. . .

ONE of our most prominent scientists writes us as follows: "You understand that, as a general rule, all a scientific writer can do is to *detect good things*, and tell of them. It is seldom that we can talk of novelties without citing their source. For example, one of your writers had an article on Tuberculosis in your Fair No., which would have carried much greater weight, if the authorities for his facts had been mentioned. I, for one, looked askance at his conclusions until I saw, some time afterwards, what evidence they rested on—viz., some recent German experiments. I still think, by the way, that your correspondent stated his convictions too strongly." . . .

PROF. GEORGESON writes us from his college (College Station, Texas) that good laborers there are exceedingly scarce. They can hardly be obtained at any price. The many railroads in construction absorb the labor which is greatly needed at the college. The climate, he says, is delightful. They had the first light frost of the season the 6th and 7th inst. Outdoor work can be prosecuted all Winter. Prof. Georgeson intends shortly to plant seed and seedlings of 100 species of forest trees, selected with reference to their adaptation to the climate and the wants of the State. . . . . .

THE editor of the Fruit Recorder, quoting from and commenting upon, what we have said regarding the size and quality of the Gregg Raspberry, asks if we ever saw a Mammoth Cluster measuring one inch in diameter? To this we answer that we have not. The Gregg, the Recorder says, will average one-fourth larger than the Mammoth Cluster, while, as it is blacker and firmer, it is more salable and better for drying. The Mammoth Cluster, he says, is the best-flavored among Black-caps and though an enormous yielder, he thinks the Gregg will yield twenty-five per cent more fruit. . . . . .

THE common practice, in preparing new beds for asparagus, of burying the manure two feet beneath the surface should be called the Tantalus system. . . . . .

OVER three years ago, the RURAL, from experiments with plants growing in its Experiment Grounds, condemned Prickly Comfrey as of very little value when compared with other forage plants which are as easily raised. Later we condemned, also from our own trials, Pearl Millet which was at the time being advertised throughout the country by many—or rather by several—seedsmen. Well, they have had their day. The RURAL is glad to know that its readers cannot reproach it with an advocacy of these two wretched failures. . . .

IT is to be regretted that during several years past the subscription price of many of the *weekly* agricultural journals of this country has been reduced to so low a figure as to render it next to impossible for them to serve the farming interests and the country home in the most telling way. As a matter of course, we advocate the lowest possible price for such journals, which is compatible with stability and effectiveness. But when a reduction of fifty cents per year is made from a price which was none too high, and a doubled circulation for the future is counted upon to cover the

loss which would otherwise inevitably be sustained, the change is one full of doubt and danger. . . . . .

SEVERAL years ago we reduced the price of the RURAL NEW-YORKER from $2.65 to $2 50 and later to $2.00. The latter change we have always regretted. We do not think it alone has ever added five hundred subscribers to our list, while it has materially limited our power to continue those improvements which, during the past four years, have marked the gratifying progress of this journal. . . . . .

WE cannot say that we very highly appreciate that class of subscribers anyhow, who cannot afford to pay fifty cents annually for the encouragement of the best agricultural writers and for the production of original, honest, first-class work. . . . . .

WHILE, however, there are thousands who deem $2.50 or even $2 00 high for agricultural *weeklies*, the price of agricultural monthlies is never a subject of comment. We must therefore conclude that there are thousands of people who are earnestly interested in rural affairs, that, all other things being equal, had rather pay $1.50 for twelve monthlies than fifty cents more for FIFTY-TWO weeklies. The old saying—"A penny wise and a pound foolish" never had a stronger application than here. . . . . .

WE beg our readers to understand that our comparison is not made from any invidious thought. We do not believe there is any other journal that would glory more heartily over the unqualified success of our entire agricultural press, according to the measure of individual merit. But we submit that the discriminations in favor of monthlies are unjust and senseless. If the price of weeklies is right—then the price of monthlies is at least three times too high. If the price of weeklies is already too low, it is suicidal on the part of publishers to run it down still lower. . . . .

THANKS to Professor Beal and to Dr. Sturtevant for specimens of corn. . . . . .

JUSTICIA writes thus forcibly in the London Garden on the subject of making schools more attractive to pupils by means of gardens. "A beautiful development of the garden idea is now taking root in men's minds on the continent of Europe and in America. To make school beautiful and pleasant is a great aim, and to make it so by means of a garden is to follow a very sure road to further good——A living garden would be bettter than any number of diagrams on the walls or any other roundabout way of teaching what can only be really taught through the eyes. . . . . .

"UP to the present time" Justicia continues, "the schools of our own and other countries, however well managed in other respects, have been far from beautiful to see, being often dismal to the hardened adult, let alone an impressionable child. Of course, the one easy and delightful way to change all this is through the garden, and where so much is sacrificed, as in most civilized countries, for philanthropic purposes, it may be hoped that many people will endow schools with gardens. . . .

QUOTING from this enterprising journal we are reminded to remark upon the change which has come over it, as shown in the number for Oct. 30. Previously it consisted of 16 pages and a cover. Now it consists of 20 pages without a cover. The price was 6d. Now it is 4d. per copy. Either one of these changes, it might be supposed, would suffice for once. The two together will necessitate a formidable increase in its circulation to insure the same income as before the change. But Mr. Robinson's motto has ever been "onward." He has thus far taken no step backward and we trust he never may. . . . . .

IT is proposed to change State prisons into banking houses. There would be a full supply of officers and clerks. . . . . .

Mr. E. WILLIAMS gives to the N. Y. Tribune a very interesting article upon "Possibilities in the Corn-field." He describes his visit to the Rural Farm with Dr. F. M. Hexamer, Dr. A. R. Ledoux, Mr. C. V. Mapes and Mr. Henry Stewart, and the conclusions which were arrived at from their investigations. The article ends:

"What is the average yield per acre? I have no statistics at hand, giving the average yield per acre in New York or New Jersey; but Illinois is one of the great corn-growing States of the Union, and I find, in her Agricultural Report for 1878, the average yield per acre reported by counties, varies from seven to forty-nine, while the average in the State was twenty-nine bushels. The yearly average from 1860 to 1878 varied from eighteen to forty bushels, while the general average for that period is given at thirty-two bushels. I think the general average of the Eastern and Middle States is higher than this, but not so high as it ought to be, and if such exceptional crops as above cited will induce trials and experiments with varieties, fertilizers, or culture that will enable us to equal or even approach such yields, it will go far toward answering the query presented to the Connecticut Board of Agriculture last Winter, namely, "Whether the cost of moving the corn crop of the West to the seaboard would not produce the same crop at home." . . . . . .

WE are *very* happy to be able to place before our readers the following hopeful letter. It seems to give a reasonable assurance that we shall not be disappointed in sending a trial quantity of seeds of this valuable fodder plant to those who apply for our seed distribution:

AIKEN CO., S. C., NOV. 13, 1880.

"It is about the middle of November and still our 'Branching Sorghum,' is growing. We have had no killing frost as yet, and although the ground is wet and cold and growth is slow, yet the seeds are filling out, and I begin to think I shall have quite a quantity of seed for you. Of course as 'tis still growing, it will take time to dry, so it can be thrashed out and cleaned, and this will bring it late—yet the best of it is that the prospect is fair for a small crop. At least "*let us hope so.*" I can fully appreciate your anxiety on its account and the confusion its non-arrival would make, and I therefore wrote as I did, so as not to make too much noise in case of a failure; but the holding off of frosts has brightened the prospect. Now can you give me any hints of the best plan for thrashing and cleaning it, for I am a novice in the business?" . . . . . .

WE would advise our friend to write to Dr. W. B. Jones, of Herndon, Ga. He has raised various sorts of Doura, Egyptian Corn, etc., for years, and can give the information desired. . . . . .

THOSE who are tormented—or rather whose plants are tormented—with that disgusting pest, the *mealy* bug, will do well to read Horticola's notes of this week. . . . . .

MR. W. C. BARRY takes up a subject which, it seems strange, has never, or so rarely been touched upon before. In an article to the London Gardeners' Chronicle he says that during a visit to England he noticed the scarcity and high price of grapes. They were 3s. and 4s. per pound. The question naturally suggested itself whether it might not be possible to produce cheaper fruit by cultivating the American grape. . . . . .

The chief obstacles, it appears, to open grape culture in England are late Spring and early Autumn frosts, as well as moist, dull, cloudy weather. "Are there," Mr. Barry asks "no localities—at least in the Southern parts of England, where these frosts do not prevail and where there is a sufficient amount of solar heat to mature the grape?" . . . . . .

ANOTHER impediment to the introduction of the American grape is the quality of the fruit. English people consider it too pulpy and too foxy. This judgment has been arrived at by testing varieties like the Concord, Isabella and Hartford Prolific which even here hold but a second rank. Mr. Barry regrets that such an opinion should prevail, as it works against a trial of our new varieties, many of which, he thinks, might prove desirable if not profitable for open-air culture in England. . . . .

IN late proceedings of the Elmira Farmers' Club, as reported in the Husbandman, Mr. G. W. Hoffman, is reported as having said:

"How the cutting out of non-bearing stalks of corn can increase the yield of those that are left, except as they are given more room, passes my comprehension." . . . . . .

IT is very plain that cutting out non-bearing stalks can in no other way increase the yield of the *present* crop. The loss of pollen from the earless stalks would indeed tend to reduce the yield. That is to say, there would be less pollen for the silk (pistils) of the perfect plants. But in the one case (where all of the plants are permitted to remain) the seed (ovules, rather), would, some of them, be fertilized by the pollen of the earless plants; while in the other all the seed would have for parents those plants bearing one or more ears. . . . . .

IF we desired still further to increase the fruitfulness of the variety of corn known as Blount's White Prolific, or any other kind, the best method that occurs to us would be to cultivate a small plot—say one-eighth of an acre. Seed corn should have been previously selected from those stalks only which had borne the highest number of ears. Then just before the silk appears, cut out every stalk bearing less than *two* or perhaps *three* sets. The yield of this plot would suffer not only on account of the removal of such stalks, but also from a deficiency of pollen, in consequence of which many of the ears would be imperfectly filled out. But there can be little doubt that corn so produced would, if planted another year, yield a greater number of ears to the stalk than seed saved in the usual way. . . . . .

WE know that insects, vegetable parasites and diseases of all kinds increase in plants—we observe it more especially among edible fruit-bearing plants. The gardener or the fruit grower complains. "There is a pest for everything," he says, while gloomily anticipating the time when it will cost more to raise fruits than they are worth. But few are thoughtful or just enough to place the blame where it belongs, viz., upon those who for years have been torturing plants by all sorts of unnatural proceedings and treatment in order to please the eyes of people and to produce fruit that meets with a ready sale. Thus while we are pleased with the results which unnatural conditions produce—while we are delighted with a special growth caused by checking the evenly distributed powers and functions of plants, we may look for corresponding evils in one form or another, and a wider field for the practice of microscopists, "fungologists," entomologists, and, in fact, plant doctors of all sorts. . . . . .

WHAT OTHERS SAY.

MR. OTSTOT, on being asked what Winter apples he would recommend for Southwestern Ohio, gave the following list: Ben Davis, Smith's Cider, White Pippin, Rome Beauty, Jennetting, Winesap, Jonathan and Newtown Pippin.

CORNFLOWER.—Some of the prettiest things in the show-house at Kew of late have been some pots of Centaurea Cyanus, the common cornfield weed, whose blue flowers are so charming, says the London Chronicle. Now that it is raised to the dignity of a show plant we shall not care to call it a weed again. It is said to be the favorite flower of the Emperor of Germany, and another Emperor is stated to have preferred it to all other flowers in his garden. We must say their Imperial Majesties show their good taste.

FRUITS FOR KANSAS.—The Kansas Agricultural Report gives the following as the answer to many questions as to the varieties that produced a full or fair crop in 1879. The answer is given in the order of the quantity borne:—Of apples, 50 of the reports name the Rawle's Genet as the most productive; 19, the Willow Twig; Winesap and Ben Davis, 18 each; 16 Maiden's Blush, Rambo and Northern Spy, 14 each. Peaches were almost an entire failure. Pears (in the order named), Bartlett, Duchesse d' Angouleme, Seckel, Flemish Beauty. Plums, Wild Goose, and Miner.

THE FRUIT RECORDER knows of no one where the Kittatinny stands the Winter, who would advise planting the Snyder. But what does recommend it (the Snyder) is its extreme hardiness.

CRANBERRY pickers being unusually scarce about Cookstown, N. J., this season, in order to get his crop promptly gathered, Major Newbold, of that place, as we learn by the Germantown Telegraph, offered as a prize to the male picker who gathered the greatest quantity in one day, a valuable double-barrel gun and to the best female picker, a handsome cottage set of furniture. About three-fourths of the population of Cookstown contended for the prizes, which resulted in the crop being gathered in a single day, a prodigious amount of work having been accomplished.

ON warm soil and in sheltered situations, peas sown at this season and kept well covered during Winter will often grow finely in Spring and produce a crop long before Spring-sown peas are ready for the table. So says the experienced Dr. Hexamer.

THE GARDEN ON THE FARM.—President McGregor of the Oxford Farmers' Club—as reported in the Farm and Fireside, of Ohio, says that we run too much to the great staples, and the average farmer has a contempt for eggs, butter, honey, etc; he looks upon them as small, peddling business. The truck patch will pay in dollars and more in health. All the interests of the farm depend on health, and the road to health often runs through the truck patch. At a dish of red raspberries and cream the farmer forgets his weariness. Apiarists tell us that the egg which under ordinary rearing produces the working bee, if put in a superior cell and fed on the royal jelly, makes a queen. So the diet and surroundings of our children have much to do with their characters. Many children have been injured by ginger snaps and painted candy, but by extract of white clover and ripe fruits, never. Many luxuries are beyond the reach of farmers, but strawberries they *can* have, and these he believes to be a means of grace. He doubts not that hog-and-hominy has often been the means of back-sliding.

A NEW BREAD.—There will undoubtedly be a great demand for wheat-meal bread, says the Mark Lane Express. At one shop, it says, they are selling more of it than of white bread, and it is already reported to be sold by over a hundred bakers in London. English millers, in making the meal, will get a good start upon their rivals in America and Austria. The bread is especially to be recommended for the use of working men and their families, and most of all to those who, like the agricultural laboring class, do not eat much meat. It is to be hoped that the Bread Reform League will soon have branches in all parts of the country.

CLYDESDALES, comments the above journal upon American notes, are outnumbering the French horses called Percherons in the State of Illinois. Something with more style and better action than the Percheron was called for, and the Clydesdale appears to fill those requirements.

MILK AND LIME WATER.—The Boston Journal of Chemistry remarks that milk and lime water are frequently prescribed by physicians in cases of dyspepsia and weakness of the stomach, and in some cases are said to prove very beneficial. Many persons who think good bread and milk a great luxury frequently hesitate to eat it, for the reason that the milk will not digest readily; sourness of stomach will often follow. But experience proves that lime water and milk are not only food and medicine at an early period of life, but also at a later, when, as in the case of infants, the functions of digestion and assimilation are feeble and easily perverted. A stomach taxed by gluttony, irritated by improper food, inflamed by alcohol, enfeebled by disease, or otherwise unfitted for its duties—as is shown by the various symptoms attendant upon indigestion, dyspepsia, diarrhea, dysentery, and fever—will resume its work, and do it energetically, on an exclusive diet of bread-and-milk and lime water. A goblet of cow's milk may have four tablespoonfuls of lime water added to it with good effect.

EXTRA-HARDY APPLES.—We find the following in a catalogue just received from R. G. Chase & Co., of Geneva, N. Y.: In the northern portions of the United States and adjoining provinces of Canada the feeling has prevailed until recently that nothing in the shape of apples could be grown, except crabs. While this is true as regards many of the old varieties, a few Russian apples and northern seedlings have been introduced, which, though they may require better care than that under which the crabs will thrive, have proved themselves equally hardy. In proof of this we would point to the Duchess of Oldenburgh, growing on the highlands of Oneida and Lewis Counties, and in Northern New Hampshire and Maine. The following list we rate as hardy as the Duchess of Oldenburgh, and consider the fruit of many of them of better quality than the Baldwin. Against each variety we give the season of ripening at the North.

Tetofsky	August.
Duchess of Oldenburgh	September.
Alexander	October.
Peach	October and November.
Aucubafolia	November and December.
Clark's Orange	November to February.
Plumb's Cider	November to February.
Wealthy	November to February.
Bethel	December to February.
Haas	December to March.
Rubicon	December to March.
McIntosh Red	November to April.
Pewaukee	January to April.
Walbridge	March to June.
Quince Apple	March to June.

LARGE IOWA APPLE ORCHARD.—A local paper [the Country Gentleman, from which we take the following, does not give the name] states that Hon. John N. Dixon of Mahaska county, Iowa, has safely housed, ready for barreling and shipment, 35,000 bushels of apples this season, in addition to enough of the smaller, poorer or injured fruit to make 500 barrels of cider of 45 gallons each. Of this immense crop of apples, he sold 1,500 barrels to one man in Minneapolis, 600 barrels go to England, and 500 to the Black Hills. He has sold about 2,000 barrels to local points in the State, or, in other words, he has sold 4,600 barrels, or 14,000 bushels, leaving about 21,000 bushels yet on hand. Messrs. Schenck & Co. have already delivered to him 6,000 apple barrels, and have contracted to furnish him with 6,000 more, to be delivered as soon as possible. These barrels will each hold three bushels, and will carry the entire product. It is estimated that the cider will more than pay for all the cooperage and the entire expense of harvesting and shipping the apples. From remarks he made in relation to the price received for those already sold, and estimating the balance of the crop at even the same low price, Mr. Dixon will pocket not less than $10,000 clear money, as the product of his orchard of 160 acres, which contains a large number of trees not bearing.

MILK.—Referring to the recent outbreak of fever in Paddington from the supply of milk, with which we (London Live Stock Journal) dealt in a recent article, Dr. Stevenson, the Medical Officer of Health for Paddington, suggests that the simple and effective preventive is to boil your milk before using it. He adduces the common practices of France, Germany, Switzerland, and India as a further persuasive to the adoption of this somewhat unusual precaution.

"OUR American friends are shipping milk in glass jars or bottles, direct from the producer to the consumer," continues the same journal. "The idea is an ingenious one, and so far is proving a great success, one farmer alone has ordered and has in use over ten thousand of these novel vessels, which, when filled with the milk drawn from the cows, are sealed securely down, with the result that the consumer is insured of the genuine article, for which the farmer in return can command a paying price. Why should not the experiment be tried in this country? Indeed, why should it stop at milk? . . . Pans of butter and bottles of milk might in this way be sent from country to town without the inter-

ference of the omnivorous middleman, and greatly to the enrichment of the farmer."

BACTERIA.—We copy the following remarks from an able address delivered before the British Medical Association by Mr. Lister, upon the action of those extremely minute plants known in a general sense as bacteria. Under certain circumstances, earth, air, water, our very bodies teem with living organisms of such extremely minute size that the highest powers of the microscope alone suffice to make them obvious to the eye; other means of observation show the great probability that still more minute organisms exist in myriads. It will suffice for our present purpose to speak of all these as bacteria. Assuredly our forefathers would have laughed to scorn the idea that there was any use in studying creatures of such infinitesimal minuteness; in our own times the so called practical man has been known to sneer at and deride such investigations. But what if it be proved that the various processes of fermentation, to which he owes his wine, his beer, his vinegar, depend essentially on minute organisms?—what if it be proved that still smaller organisms interfere with his digestion, and, worse still, putrefy his tissues and poison his life-blood till he, and thousands like him, are laid low with epidemic pestilence? And in a general sense, all this is proved. It is proved that if certain organisms enter the blood, putrefaction and blood poisoning of necessity occur; that if an organism of a certain kind gain entrance one particular form of disease occurs in consequence; and that if some other organism gain access to the body another disease shows itself. On the other hand, it is proved that if these organisms can be kept out no putrefaction, no ulceration, no disease occurs. Mr. Lister has turned his knowledge to practical account, and by its means sensibly reduced the sum of human misery and suffering. His address contains a brief statement of the facts of the case as at present known, and justifies the hope that the prolonged study of these minute plants and their ways of life may lead to the adoption of practical means of prevention, in the case of many fevers and blood diseases, as efficacious as properly performed and properly renewed vaccination is proved to be in the case of small pox.

BLACK GRAPES—EUMELAN.—Speaking of this grape in the Gardeners' Chronicle of London, Mr. W. C. Barry says: The bunch and berry, though not large, are of good size, and the flesh is tender, juicy, sprightly, refreshing and very agreeable. No grape that he knows has such a pleasant vinous flavor, and it is surprising what a quantity of the fruit can be eaten without causing any uneasiness. The only defect which this variety exhibits is the habit of the vine. Had it the vigorous constitution of the Concord or Hartford it would undoubtedly be cultivated almost to the exclusion of all other black varieties, Mr. Barry thinks. It is such a poor grower that it requires to be grafted upon a vigorous variety, then it succeeds admirably.

LINDLEY, OR ROGERS'S No. 9, is in Mr. Barry's judgment, all things considered, one of the best red grapes we have. The bunch is large and long; berry of medium size; flesh sweet, juicy and high-flavored. The Delaware has long been regarded as the best table grape, but he thinks that the Lindley, when it becomes known, is destined to supersede it. The fruit is certainly equal in flavor, much larger, more showy, and the vine is a stronger grower.

Everywhere.

NOTES FROM CENTRAL KANSAS.

ACCORDING to a letter from Frank Wilkeson in the New York Sun, 16,000 people in Western Kansas are now starving, owing to the failure of their crops on railroad lands sold to them as fertile, but in fact barren wastes on which no crop can be grown, the representations of the railroads to the contrary notwithstanding.

This item, which I clip from an Eastern paper, refers to a letter written to a New York paper by a nephew of the Secretary of the Northern Pacific Railroad. A number of years ago, before the Northern Pacific Railroad got under way, the Wilkesons bought a large tract of railroad land here in Central Kansas and Frank was forwarded out here with a great flourish and a monstrous array of machinery, and was going to open up a grand "bonanza farm" that would not only astonish the natives but make a sensation in New York; but somehow Frank took more kindly to boon companions, his dog and gun, etc., than to steady business, and his fields did not get sowed right or his crops harvested right. A consultation was held by the "elders" and the conclusion reached that their interests were in another direction, that they had vast quantities of land at the north (acquired under the Jay Cook fiasco) and they wanted immigration turned northward, and they said to Frank, "You are an utter failure as a farmer, but we have hit upon a plan to make your failure *a success* after all. You stay where you are, and write *down* the Kansas Pacific lands; and your failure to raise crops will serve as a good illustration—*it is the land*, not you, that is in fault. You can write good letters; do it, and we will pay you a good salary." And so Frank has staid here and written letters for Eastern papers.

Frank has a magnificent crop of wild sunflowers and pig-weeds as big as four-year-old cherry trees, etc. The sulky plows, the improved harrows, the harvesters lie rusting about the fields.

The town bummers when they want to hunt prairie chickens, fill their flagons and go out to Frank Wilkeson's; when they want to hunt Jack rabbits, they fill their flagons and go ont to Frank Wilkeson's, and so on. And when country life palls on the noble Frank, the steeds are harnessed to the imported wagon, and the green baize door closes behind the seeker after the pleasures of life in town.

Now other capitalists who live East have large farms in Frank's immediate vicinity and contract all the work done and raise big crops. They have not only made ten per cent. per annum on their investments, but doubled and trebled their original capital. Men on all sides of him, who live on their land, raise good crops, have fine herds of blooded stock, horses, cattle, sheep and hogs that would draw attention at a New York State Fair. The county ships off annually over one million dollars' worth of grain and stock. Where does it all grow?

H. L. J.

RURAL SPECIAL REPORTS.

ILLINOIS, Champaign, Champaign Co., Nov. 21.—Since the 16th inst. we have had the coldest spell in November I remember in 25 years' residence in Illinois. There are a few inches of snow on the ground, but it has not melted at all. The mercury has been at zero or below at sunrise for five or six days. B. F. J.

OHIO, Bennington, Monroe Co.—The cow-peas, beets and raspberries did well; but I can't get more than four ears to grow on a stalk of Blount Corn. T. W.

The Querist.

ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention.]

Farm Manures.

E. E. H., Scotia, N. Y., inquires whether it is advisable to draw out manure in the Fall, and spread it on land to be plowed in the Spring for corn, and also if it will pay to build a cistern in the barnyard to catch the leachings.

ANSWER BY PROFESSOR I. P. ROBERTS.

No better method can be practiced than to draw ont all manure, whether fresh or otherwise, between the 1st of October and the 1st of March, and spread it directly from the wagon or sled upon the ground, whether it be plowed or unplowed. There might be a slight danger of waste by washing where the manure was spread on steep hill-sides or upon an unusually deep fall of snow; but this waste is much less in practice than in theory and need scarcely be avoided in most cases. In my experience, manure of the same quantity and quality, spread on the soil in November, has given 20 per cent. better yield of corn than the same amount spread on immediately before plowing in the Spring. My reasons for winter manuring are several: The manure has to be handled but once, and that at a time when work is not pressing and time therefore not so valuable, and when the fields are not wet as in Spring. The chief difficulty in spreading manure is to make it perfectly uniform so that the fertility of the soil shall be uniform. By winter manuring we really distribute twice as the plowing in Spring performs a redistribution. As manure is usually kept at least one-half, and frequently a greater proportion, is wasted by leachings and escape of ammonia; practically, in this climate the wastage of manure when spread in the Winter on the field is very slight—not one-tenth of what it is when left in the yard in a hot heap; and in this way also all the leachings are saved. A single experiment which I performed will illustrate the loss occasioned by bad handling; Land No. 1, no manure; land No. 2, a given amount of manure which had been exposed to loss by leaching and heating for three or four months; land No. 3, the same amount of manure as on No. 2 from a covered barnyard where all the urine had been saved. No. 1 yielded 20 bushels of oats, (roundly stated); No. 2 yielded 40 bushels; No. 3 yielded 60 bushels.

In regard to whether it will pay to build a cistern, I would say, yes; almost anything will pay which husbands the fertility of the farm. My observation teaches me that in the State of New York during the last year, double the amount of fertility that has been purchased in the form of commercial fertilizers, has been wantonly wasted around the barns. Any one who has passed through the country and observed the old grain barn modified into a dairy barn by the addition of a lean-to for cattle, will readily appreciate the perfect arrangement for leaching out all the valuable constituents of the manure, by the following single diagram:

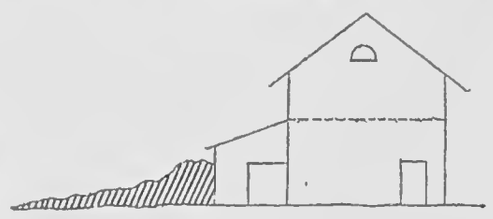

FIG. 413.

I can point out a far better way than to build a cistern, but if circumstances and means will not admit of it, a durable cistern can be built very cheaply in the following manner:

Dig a hole of the desired diameter and 14 feet deep, shaping the bottom like that of a large kettle; lay a flat stone, one to two feet square, in the middle of the bottom and about it lay brick *flatwise* until the curved portion is passed and the walls become perpendicular. Then make a four-inch wall the remainder of the distance. An expert mason can arch the top or "draw it in" without any frame and leave a hole about two feet in diameter across the top, which should be a little distance below the surface of the ground. About this hole build a curbing two to four feet high and cover the arch with earth to secure it from frost. The cistern should not only be laid with good cement but should have two coats inside. Throughout the prairie countries of the West, this is the universal method of building cisterns, and it is admirably successful. Place in it a good boat-pump of galvanized iron.

The leachings are not only worth saving but contain a large percentage of the most valuable constituents of the manure. A little care must be exercised in their application. If strong, they should be applied just before or after a rain; or, if put on when the soil is dry, they should be diluted, or else the first effect will be to "burn" rather than to cause an immediate or rapid growth. Joseph Harris claims that "the drainage from the barnyard contains a little more than half as much nitrogen as the cow-dung; and it is probable that the nitrogen in the liquid is in a much more available condition than in the dung. It contains nearly five times as much potash as the dung. * * * * On an average, a ton of the urine of our domestic animals contains more than twice as much nitrogen as a ton of the dung." A cow voids of urine from four to eight tons a year, according to character of food.

The waste of keeping manure in uncovered barnyards is best illustrated by a few tables from reliable authors:

			Nitrogen, lbs.
(J. Harris.)	5 tons fresh	in November	64.3
Same	5	April	46
"	5	August	25
(Moreton.)	5 tons fresh		40
	5	when half-rotted	35
	5	cheesy state	30
	5	completely decomposed	20

(Moreton.) Manure made in box-stall having 71.04 water, dried at 75 deg. F., gave 2.37 per cent. ammonia, 0.3 per cent. phos. acid, 2 per cent. potash and soda.

Manure made in open barnyard at the same time, having 71 per cent of water and dried at 75 deg. F., gave 1.7 per cent. ammonia, .21 per cent. phos. acid, .8 per cent. potash and soda.

The better way to save leachings—where circumstances will admit and where you have sufficient absorbents—is not to have them. This may be accomplished by having a covered barnyard, which pays for itself in a short time, not only by preserving the manure, but by protecting animals from the inclemency of the weather. I am now using one 60x46 and 11 feet deep, two sides of stone and two of wood. The bottom is paved and cemented, making it solid and water-tight. This accommodates the droppings of 18 cows and 12 horses. The cattle are largely fed on cut corn-stalks; the coarser pieces not eaten are used for bedding, and, with the manure from the horse stables, form sufficient absorbents to take up all the urine. So much of the cows' horns is removed as is safe, and into this covered barnyard all the cows are turned for exercise and water, remaining there most of the day. This is the most successful experiment I have ever tried. Every particle of urine is saved; the tramping of the cattle prevents too rapid heating; the cold cow manure is mixed with the warm horse manure, and, what is best of all, it is neither damp nor offensive. The cows, when they become accustomed to their close quarters, are about as peaceable as so many sheep. Eleven windows and three large ventilating shafts furnish abundance of light and air. In Summer, when there is comparatively little cow manure, the horse manure is spread and wet with water enough to keep it cool. If it is not convenient or desirable to have the animals over the barnyard, a barnyard serving the same purpose can be built very cheaply.

Cornell University.

The Albemarle Fertilizer.

H. L. L., Westfield, Mass, asks whether the Albemarle Fertilizer sold by parties in this city is as valuable as its circulars claim it to be.

ANSWER BY DR. A. R LEDOUX.—The "Albemarle Fertilizer" is simply *alba marl*—white marl. It owes its fertilizing and mechanical effects almost entirely to the carbonate of lime it contains. It is not a complete manure in any respect. I have examined it and seen Dr. Doremus's analysis. Lime is of great value as an application to very many soils, especially to clay soils, and on this account the fertilizer in question would, in many cases, show a really beneficial effect for one or two seasons, but after that it would do *injury* on most soils. Marl of the same character is found in Virginia and North Carolina in great abundance. In the latter State it underlies 33 counties. In the South an application of lime or marl will often produce a sudden and marked improvement in the crop, but a second application will nearly always show no result, or else an injurious one. As to the price, I should be guided by the cost of ordinary ground lime in any locality. There is only a minute quantity of assimilable plant food in the "Albemarle."

Analysis of Ox Gall.

M. Y., Cincinnati, Ohio, asks for an analysis of beef gall or bile.

ANS.—The bile of the ox has been examined by chemists with much care, and the results of these investigations have been as follows: Ox bile is a variety of soap, made by the union of two distinct resinoid acids with the alkali soda. These acids are known as glycocholic and taurocholic, and both contain nitrogen. The latter acid contains sulphur. Ox bile also contains a portion of mucus, very small quantities of cholesterine, a small proportion of stearic, oleic and lactic acids combined with potash and soda. Besides these, there is a peculiar coloring matter which is joined to an alkaline base. More recent examinations of this exceedingly composite substance have led to the discovery of another component to which the name of lecithin has been given. This substance contains oleo-phosphoric acid. No quantitative analysis has been made to our knowledge.

Feeding Oats to Sheep.

A Subscriber, Linn, Iowa, asks whether it will pay to thrash oats for sheep—oats are worth 20 cents per bushel and it will cost seven cents per bushel to thrash them."

ANS.—It is best to feed the oats in the sheaf. The sheep will thrash them cleaner than any man can do, not wasting any grain, and will eat up nearly all the straw. It will be best to feed the sheaf oats in a rack so that the sheep will not trample them underfoot. Sheep grind their food so thoroughly that the grain need not be ground, nor need any fodder be cut for them.

How?

Inquirer, Chester Hill, N. Y., asks how to feed a pet Baltimore oriole in Winter.

ANS.—We have never had experience in keeping this bird, but trust some one of our readers can answer the inquiry through our columns.

Miscellaneous.

L. B., Yates Co., N. Y., 1, asks if we are personally acquainted with the merits of the Lion feed-cutter advertised in the RURAL Nov. 13; 2, where he can obtain one and, 3, if it will work as well in corn fodder as in straw and hay.

ANS.—1, We have often seen the workings of the feed cutter mentioned, and it does its work well. 2, We suppose from any general hardware dealer. If not obtainable there, write to the manufacturers, Messrs. Belcher & Taylor, Chicopee Falls, Mass., (3) Yes, just as well.

G. G. Dayton, Texas, says that the leaf rollers play sad havoc with his Isabella grape-vines, though they do not touch the Scuppernong growing near by, and he asks for a remedy for the pest.

ANS.—Whale oil soap and water will kill them. It is not very efficacious, however, as the trouble is to touch them. Picking off the leaves is the only other remedy that we know of.

S. E. G., North Bend, Neb., asks the cause why the small twigs of apple trees die.

ANS.—It is due to the twig-blight. The cause is not positively known. It may be an insect, it may be due to the weather. This sort of blight rarely proves of a serious nature.

THE
Rural New-Yorker,
PUBLISHED EVERY SATURDAY.

Conducted by
ELBERT S. CARMAN.

Address
THE RURAL NEW-YORKER,
No. 34 PARK ROW, NEW YORK.

SATURDAY, DEC. 4, 1880.

NEARLY two years ago we strongly reprobated the extortionate charges made by the Union Stock Yard Company of Chicago. From the entire Northwest, as far as Kansas, aye, and Texas, the live stock of the country converges towards the Western Metropolis, on its way to market for the East or Europe, and on every single animal that arrives there an exhorbitant profit is made. Feed is supplied at an extortionate price, the handling of the animals is brutal in its cruelty and detrimental in the damage it inflicts upon them, while even the hotels connected with the yard charge a price in accordance with the company's other exactions, while their fare is as shabby as the rest of its conduct. This abuse has ceased to be a local grievance; its evil consequences extend over so wide a territory that all of us are deeply interested, and while public opinion everywhere should condemn it, local legislation should promptly put an end to it.

RURAL PAPERS AND EXPERIMENT FARMS.—The Western Rural needs an experimental farm before its ambition can be satisfied. *Every* agricultural or horticultural paper needs such a farm if it cares to make its teachings original and trustworthy. It is also necessary—the farm procured—that the editor should spend not less than one-third of his time, during the growing season at any rate, *in the field.* And he must work with his own hands, as well as see to it that his instructions are carried out by others. It seems to us that the time has passed when an editor can sit in his office, week in and week out, year after year, and yet instruct farmers What to do and How to do it, who are themselves *practicing* farm work from morning till night. No matter how thorough his farm education may have been, farm methods are constantly changing. New seeds are brought to notice every season. Cross-breeds and hybrids of fruits, grains and flowers are to be carefully tested. Improved or new agricultural implements are every year to be examined and their comparative excellence ascertained. An editor cannot shut himself up in his office and yet know about such matters.

THE COST OF EXPERIMENTS.—It is a matter of surprise that there are many in Michigan (as in other States) who insist that the Agricultural College should conduct a great number of experiments in the interests of agriculture and horticulture and yet return to the State, "dollar for dollar," all it receives from the State. The object of an experiment is to find out something of value. If such experiments could be conducted and yet return to the experimenters all they cost in time and money, we should not need *public* institutions for such purposes; private enterprise would prove ample. We know from our own experience upon the Rural Farm and Grounds that valuable facts or results cannot be obtained without a great amount of painstaking, tedious labor. And the worst of it is that they are rarely obtained even then. In experiments the chances are largely *against* success, and the adverse ratio becomes greater according to the value of the information sought. Had Dr. Lawes, of Rothamsted, been obliged to make his experiments "self-supporting," they would have been ended in their infancy, instead of being conducted perseveringly, patiently, through 40 years.

WEATHER PROPHETS.—"He that observeth the wind shall not sow, and he that regardeth the clouds shall not reap," is the Scriptural warning against the weather-wiseacres; but, alas! like too many other Scriptural warnings and injunctions, it is too often disregarded or forgotten. The weather prophets have of late been contradictory in their vaticinations, Vennor, of Canada, foretelling an early and severe Winter, with a "very" universal superabundance of snow; while Devoe, of New Jersey, predicts a mild Winter, with more slush than snow and rain than frost. The New York Herald's private prophet agrees, in the main, with the Canadian as to the earliness and severity of the Winter; but while the latter is content to draw his conclusions from the meteorology of North America, the Herald man, disdaining all domestic sources of recondite information, goes to mysterious Asia for the cause of the phenomenon. There he finds that throughout the vast and arid wastes of the central and northern parts of that mighty continent the atmosphere this year is exceptionally dry and that the earth is therefore losing a great deal of its heat to a cloudless sky. Hence the formation there of intensely cold waves that will move eastward across Behring Straits and over the Rocky Mountains, whose snowy summits will add to the frigidity of the icy currents on their cheerless way across the continent to the Atlantic. Phew!

DEVON CATTLE.—We are glad to see that more attention is again paid to this beautiful and highly useful race of cattle, both at home and abroad. They have been partially overlooked for some years past, owing to the great rage for Short-horns. Nothing is equal to them for working oxen of a medium size; their beef is of first quality; and some of the families are still bred to retain their original great milking points.

By late sales in England, we notice that Devons have fetched fully as high prices as the average Short-horns, and we understand it is nearly the same in our own country. They are the most profitable of any breed of cattle to be reared on short pastures or hilly or mountainous lands—they are so hardy and active they will thrive and get fat on these, where larger animals could not. The only objection urged by some few persons against Devons is, that they do not mature quite so early as Short-horns, and that they are from one-fifth to one-fourth less in size. But on the rich pastures of the West the breeders are increasing the size somewhat, and are striving for earlier maturity. To the first of these we are opposed, for if the size is much increased it will unfit Devons to occupy the lands profitably for which they are now fitted. A few months' earlier maturity would be beneficial, and if it is attained without loss of any other good quality, it will of course prove advantageous to the breeder, and more especially the feeder.

SWINDLERS ABROAD.

ABOUT six months ago, and again three months since, we warned our readers against the untrustworthy character of the Chicago Produce Exchange Company, which, both in country papers and by circulars, advertised that they were ready to do a large business in "puts," "calls," "straddles," etc., in grain, on terms very advantageous to their patrons. We insisted that it was a swindle similar to the great stock swindle fully exposed in these columns about a year ago. It is to be hoped, therefore, that none of our subscribers are among the dupes out of whose pockets this swindling concern filched the $100,000 for which it has just failed. In view of the unusually large number of swindling concerns at present operating among farmers—supposed to be flush after selling their crops—we shall at once resume our exposures of such frauds, temporarily suspended during the Summer lull in their operations. We beg our readers, therefore, to promptly inform us of any such rascals "working" in their neighborhoods, giving us the fullest possible information, to enable us to "diagnose" their cases for the benefit of our readers at large. Even in spite of the extreme caution with which we admit advertisements into our columns, we have been twice deceived into admitting the advertisements of parties who failed to carry out their engagements. In both cases we promptly exposed these so soon as we were informed of their dishonesty, and should we ever in future be imposed upon by similar frauds, we shall be delighted to make their real character known so soon as we learn of their misdeeds through our friends or otherwise.

IRISH AGITATION.

DID it occur to any of our readers on Thanksgiving Day to be thankful that he was neither an Irish tenant nor an Irish landlord? For ages the condition of the former has been rescued from absolute misery only by his natural buoyancy and unambitious contentment. Satisfied with little, his landlord has always taken care that he should never have much, by wringing from him every farthing he could make beyond enough to supply the bare necessaries of life. Never "forehanded," therefore, whenever an unfavorable season has visited him, it has brought misery and starvation for him. Little wonder that he has at length rebelled against his oppressors—the trodden worm, we are told, will turn against the foot that weighs down upon it. Of the landlords, eighty are reported to be guarded from the wrath of their tenantry by policemen, both at home and wherever they move abroad. Thirteen are "Boycotted" by the Land League—a penalty more severe than excommunication in olden times. The execrations of the nation are constantly in their ears and the fear of it at their hearts, while the Government is avowedly unable to afford them safety or relief.

The English Tories still insist on coercion before any measure of reform of recognized abuses shall be introduced into Parliament, and in this repressive policy they are supported by one branch of the Liberals, who believe in a "strong" government rather than a just one. The majority of the Cabinet, however, conscious that the crushing of the present movement would settle nothing except what all acknowledge—the superior might of the Government—seem resolved, so soon as Parliament meets, in January, to introduce a bill looking to the ultimate establishment of peasant proprietorship in Ireland. The late expedition of the military to collect the crops on Lord Erne's estate, near Ballinrobe, seems to have convinced all that it is as unwise as it is inconvenient to attempt to gather in the harvest with the bayonet.

A SPECIMEN RAILROAD OUTRAGE.

THE latest specimen of railroad extortion and arbitrary tyranny was perpetrated in Baltimore by the Baltimore and Ohio road, last Friday. Like a thunderbolt from a speckless sky there burst upon the grain trade of the city, without a word of warning, the announcement that after the 6th of December, the rates of storage on wheat in the railroad's elevators would be raised to three-sixteenths of one cent per bushel for five days or parts of the same, and 2⅜ cents per bushel for each and every ten days thereafter or parts of the same. These exorbitant charges are exacted on the ground that the storage capacity of the elevators is insufficient to accommodate the vast bulk of grain accumulating in the city, and that this heavy tax will force the owners of the grain to ship it promptly, and thus make room for more cereal shipments over the road from the West. The capacity of the elevators is 2,850,000 bushels and they now contain 2,703,865 bushels—2,087,158 of wheat and 616,707 of corn. Moreover, several tobacco warehouses in the city are said to be filled with grain and so are many railroad cars on the track, so that the grain blockade is almost complete. At first glance, therefore, it would seem that the grounds for the railroad company's action have at least some plausibility.

It must be borne in mind, however, that the lack of sufficient storage capacity is due to the fault of the railroad company, which thus profits by its own negligence, while the loss falls upon its customers. Last year there was a similar grain blockade which should have warned the company to enlarge its facilities for this season. Moreover, while it levies a heavy tax on its patrons avowedly to force them to ship their grain in the absence of vessels from the harbor, it is itself rushing more grain from the West, thus increasing the embarrassment. Already wheat in the Oyster City has fallen from four to five cents a bushel, while the trade there has become thoroughly demoralized. The Company received the grain with the implied agreement that it should be subject only to the usual rates of storage, and the additional tax arbitrarily imposed on it has depressed values and shaken confidence in the future, inasmuch as the whole trade is thus shown to be at the mercy of the greed of the Company. The grain dealers have entered some vigorous protests, signed a series of condemnatory resolutions, and intend to seek legislation regulating storage charges in future.

BREVITIES.

OUR portraits of distingnished farmers and horticulturists will be continued through 1881.

A *free copy* of the RURAL NEW-YORKER for 1881 will be mailed to any present subscriber who will send us a club of SEVEN.

WE are looking for a fall in the price of American apples in the markets of England. We advise our exporters to ship cautiously at present.

YES, we would esteem it as an exceeding favor if our present subscribers would interest themselves to procure us new subscribers from among their friends.

WE should feel much obliged if subscribers in renewing would state what Departments of the RURAL please them most, and suggest wherein improvements might be made.

THOSE intending to contribute to the Corn Special of the RURAL NEW-YORKER (the first number in the new year) are requested to send in their notes at once.

THE sudden closing of the canals leading to this city has shut up, it is estimated, no less than seven million bushels of grain, and straightway the "bulls" in the produce market have become jubilant at the prospect of higher prices for breadstuffs.

THE port charges in this city have become so excessive that the Maritime Exchange has resolved to take action looking to their amendment. The producer and the consumer are both sufferers from these exactions of the middlemen and it is to be hoped that the self-interest of the public at large will find some means of putting a check upon such extortion.

AUTHORITIES AGAIN DIFFER:—The San Francisco Chronicle from careful inquiries, estimates the wheat crop of California and Oregon at 36,000,000; the Department of Agriculture's Report puts it at 58 680.000 bushels—a difference of 22,680.000 bushels! Last year, however, the actual outcome of the wheat crop on the Pacific Coast was about ten million bushels less than the Department's estimate.

CONVICTED dealers in watered milk have paid fines to the amount of five thousand dollars in this city during the past year. Inasmuch as not one dishonest dealer in ten is detected, and inasmuch as each fellow who has been "found out" in one such offence, has been guilty of a great many undetected adulterations, what a quantity of watered milk must the Gothamites have swallowed during the twelvemonth!

EXPORTS of live cattle to Europe have become very small, owing to the risks during the voyage at this stormy season. A specimen loss was that on the steamer Brandford City which reached West Hartlepool, England, on November 23d, with a cargo of cattle from Boston, having lost 476 head during the voyage. In the three months ending October 31, as many as 11,115 head were lost, or seven per cent.—and that in comparatively mild weather.

THE OHIO HORTICULTURAL SOCIETY will hold its annual meeting at Columbus, December 8th, 9th and 10th proximo. All who take an interest in Horticulture are invited. Local Societies will send Delegates. The Ad-Interior Committee will report. Valuable and interesting papers are expected and lively discussions. Take your fruits for display and for identification. Annual fee of membership $1. Geo. W. Campbell, Esq, Acting Secretary, John A. Warder, M. D. President.

IT has again become necessary that we should state that those desiring specimen copies of the several papers with which we have made special clubbing arrangements, should apply to those papers, viz., The Weekly Inter-Ocean, Chicago, Ills.; The Weekly Detroit Free Press, Detroit, Mich.; The Weekly Globe Democrat, St. Louis, Mo.; The Weekly New-York World, 35 Park Row, New York; The Weekly Pioneer Press, St. Paul, Minn.; and the Weekly Evening Post, New York city. Specimen copies will be sent *free* to those of our friends who apply. Subscriptions for any or all of them will be promptly forwarded by us.

EXPORTS of cattle from Canadian ports have ended for the season, and during the Winter months exporters will deal in American cattle at Portland and Boston. It was lately announced in England that Canadian stock dealers had contracted for 20,000 head of American cattle for shipment to Great Britain, and some of our transatlantic contemporaries became well-nigh hysterical at the bare prospect of the possible introduction of these into the United Kingdom as Canadian cattle, in which event it was strongly insisted that Canada, too, should be scheduled. The announcement that Canadian dealers intend to ship American cattle from American ports, may explain the matter and allay the excitement of our jealous contemporaries.

IT is seldom that Government can regulate the price of breadstuffs in modern times; yet Russia has just given an instance in which the Government has had a salutary influence in this direction. In St Petersburg the price of breadstuffs has lately been extortionate, but on Nov. 9, Gen. Melikoff, in whom are now embodied the executive powers of the Empire, gave a significant hint to the municipal authorities with regard to the necessity of lowering the starvation price of bread, as well as of grain, flour, etc. Straightway the prices of flour, etc, were reduced about 20 per cent. and that of bread nearly one-half. That the high prices were the result of speculative extortion is shown by the fact that the stock of grain stored in the city is considered sufficient for the ordinary requirements of two and a half years.

THE National Grange at its late meeting in Washington is reported to have passed resolutions demanding that the Bureau of Agriculture should be made a Department, and that its head should have a seat in the Cabinet, demanding an anti-discrimination railroad law, a revision of the patent laws and the enactment of a graduated income tax. It also pledged itself to hold each senator and member of Congress responsible for his action with regard to these resolutions, and to oppose, without regard to party, any member who may fail to support the principles embodied in them. Several of these resolutions have for years been persistently supported by this paper, and what is wise and praiseworthy in the others shall receive our hearty concurrence.

THE French government has reduced the duty on imported sugar from 73 francs 32 centimes, to 40 francs, the new tariff having gone into force last month. It will be interesting to notice what effect this reduction will have upon the beet sugar industry of the country, which is supposed to have flourished mainly on account of the almost prohibitive duty upon its foreign rival. There is no doubt that the immediate effect will be a large increase in the consumption of sugar, and consequently an increase in activity at the great sugar refineries at Paris, Nantes and Marseilles. Since 1844, the yearly consumption of sugar in England has increased from six to sixty pounds per head of the population, while in France it has remained almost stationary.

Literary Miscellany.

THANKSGIVING.

EDGERTON,

We'll offer up, in terms sincere,
And free from all alloy,
The thanks we owe to Him who gives
The blessings we enjoy—
The seed-time of another year,
And harvest of abundant cheer.

No epidemics scourge the land,
No pestilence, or war,
With gospel light and liberty,
We're blessed beyond compare.
Then let us offer thanks sincere
For blessings of another year.

INMATES OF LESTER HALL.

(Continued from page 790.)

Lawrence Carewe hesitated a moment. Looking down at the fair, childish face, he saw the shadow of pain in the sweet hazel eyes, the little firmly-closed mouth, and he wondered whether it were possible that this young girl felt the pang of unrequited love which had once stabbed his own heart.

"Do you think he loves her very much?" repeated Lottie Tyrrell, with a piteous prayer for a negative answer in her hazel eyes.

"I am sure so," Dr. Carewe answered, firmly—cutting deep, like a skillful surgeon; and although he saw the shiver which ran through the slight figure, he made no further remark, but began talking to her of different subjects, in his pleasant, cheery manner, and let her emotion pass over unnoticed: putting her so completely at her ease that in a few minutes, when Ernest came up with a smile and outstretched hand to greet her, calling her his little playfellow, she was able to reply in the same playful tone; and even when he said how pleased he was to see her then, as he wanted her to know Cecil, she said calmly she was very glad also.

Poor little Lottie! it was very hard, although the story is a common one enough.

Ernest Kleston had been visiting at her father's some months previously, and he had taken a fancy to the pretty hazel-eyed little damsel, and had treated her to a kind of elder-brotherly kindness, which she had mistaken for a warmer feeling and cherished in her heart, until her own liking for him had deepened into love. Fortunately he was very young, and at an age when such wounds are soon healed; but she felt it keenly now, and there was a touching heroism in the calmly-cordial manner, which Dr. Carewe saw and admired.

Meanwhile in her own rooms, having replaced her traveling attire by a warm dressing-robe, Cecil had dismissed her maid and was sitting over her fire with a hot blush burning on her fair face and a feverish light in her lustrous brown eyes, while her fingers—on one of which gleamed Ernest's beautiful diamonds—were locked tightly together.

The sight of Dr. Carewe had been unexpected, and the sudden tide of joy which had overwhelmed her when she caught the sound of his rich, deep voice had startled and bewildered her; but it had soon ebbed in the strange, stinging agony which followed, when she had met the cold glance of the gray eyes which once had looked upon her so tenderly, and felt the cold, touch of his hand as it met hers.

Sitting there in the warm, luxurious chamber, before the scented wood-fire on the hearth, Cecil Lester shuddered through all her limbs at the recollection of that look and that touch; but the next moment she threw back her head proudly, and her eyes flashed with a sudden light. It was thus, then, he meant to treat her—to treat Cecil Lester, the petted, idolized beauty who reigned supreme wherever she went. How dared he? He! the man who had trembled at her touch—who had prayed for her love—who had bowed himself to the very earth before her—who had prayed to her to have pity! He to scorn her—he!

But the next moment Cecil's proud head sank, her eyes filled with slow, salt tears, and her lips quivered. The pride was but shortlived; the revulsion of feeling followed immediately. He had loved her, and she had wronged him. Was it not right that he should despise her? Had she not earned his contempt? How infinitely beneath him she was! Ah, if she could but win him to think more kindly of her—to give her a fuller pardon than he had given her yet—perhaps in time he might give her back the love she had forfeited; he might——

Cecil started up shivering in every limb, and pressing her hands to her heart as if she wished to check its furious throbbing. How dared she let such thoughts as these enter her heart? she, the betrothed of another—she, whose allegiance, whose loyalty, whose affection, were all the possessions of another, whose wife she would be, if she lived, in a few months! If she lived, and she was young and healthy and strong—she was not likely to die, she thought bitterly. Oh, if by some fortunate reading of her destiny; it were to come to pass that she should have consumption and die, as girls young and strong and beautiful as she had done, would he be a little sorry—would he care?

Poor Cecil, she was almost desperate as she paced up and down her room with restless, eager steps, and without intermission. If any of those to whom she had accounted for her pallor by the plea of fatigue had seen her then, they would have disbelieved that plea entirely. There were no traces of fatigue in the fierce energy and passion of every movement, until at length her strength failed her, and she sank down in her chair faint and exhausted, her mind in a tumult, her brain in a whirl. She had no idea of being faithless to Ernest, she had accepted him freely as her lover; she had promised to marry him; and although she had told him that she had not given him measure for measure in love, she meant to be a good wife, and make him happy if she could. But when she had done so, she had not faced the possibility of Lawrence Carewe's being exonerated from all share in her brother's downfall. She had owned to herself that she loved him, but she had resolved to crush that affection as unworthy of her, and as a means to that end she had accepted Ernest; and when the doctor's innocence had been proved—when she had known that the man whom she had so cruelly injured was the man who had tried to help her brother, and alleviate the misery of his last days of suffering—she had written and asked his pardon; she had tried to force herself to believe that she had no love for him now, but she had not anticipated such an ordeal as his presence in the house with her.

She had met him at Mattie's wedding, but her manner had been cold and stately as his own. Then she had thought herself justified, now she knew that she had erred grievously, and she had no courage to face the torture of his cold words and frigid looks. How should she bear it?

Fortunately, she was too proud to show how she suffered, and by the time Lisette came to commence the task of dressing for dinner her mistress was quite herself again.

"Mademoiselle is looking her best to-night," says the Frenchwoman, well pleased as she surveyed the fruits of her labor when Cecil was dressed: "I am glad, as it is always well to make a good impression at first."

"But I know almost every one here," said Cecil, rather languidly.

"But there are many young ladies here whom mademoiselle does not know," said Lisette, straightening a fold of the long black velvet robe, cut in a straight, old-world fashion, which Cecil wore.

"And they are all so anxious to see mademoiselle."

"Indeed!" and Cecil laughed her slight, languid laugh, and passed out of the room, looking so wondrously lovely in her black velvet and pearls, that it was no wonder that little Lottie Tyrrel, who was sitting by Dr. Carewe in the drawing-room as she entered, drew a long breath of admiration and surprise, and said, half to herself and half to the man at her side:

"How beautiful she is—how beautiful! No wonder that he loves her!"

"No wonder," said Lawrence Carewe.

CHAPTER XXIII.

CHRISTMAS FESTIVITIES.

Mrs. Brayburn's at Christmas time was, as I have said, a very pleasant place to visit at; and when I said so I spoke advisedly. Not only was it pleasant for her guests, but for the little folk in the nursery and school-room, whose holiday-time it was and who had every enjoyment suited to their ages and capabilities of being amused; but the grand event for the little people in the neighborhood was the children's party, which took place on Christmas eve, and possessed the additional attractions of snapdragon, blind-man's buff and charades, in which amusements everyone, old and young, was expected to take part. It was almost impossible to feel depressed or low-spirited in such a cheerful atmosphere; and even Dr. Carewe threw aside the gravity habitual to him lately, and entered into the fun, submitting to be blindfolded with very good grace.

"Now, children, you must be very careful," said Lottie Tyrrell, who was queen of the revels, and looking very pretty and very childish for her seventeen years in her pretty velvet dress and her bright hair showering down over her shoulders. "Dr. Carewe has very long arms, and he will be sure to catch some one soon."

"He shall not catch me."

"Nor me."

"Nor me," shouted the gay, little voices, as the children rushed helter-skelter across the hall, while their elders contented themselves with finding places of security in corners and behind pieces of furniture, while the blind man groped his way about and uttered threats of vengeance against the captured one.

"Whoever I catch I shall kiss," he said, ferociously, as he made a dive at Lottie, who slipped by him with the most adroit agility, and almost ran into Mr. Kleston's arms.

"Did you hear that frightful threat, Lottie?" he whispered, gaily, "if he is allowed to carry it out, I shall be blindfolded next time and I shall catch you."

The girl's fair face flushed and paled alternately as she laughed and turned away.

At this moment Cecil appeared at the top of the marble staircase, and came slowly down, smiling to herself at the gay shouts which proceeded from the happy children. As she came she was fastening in her belt a sprig of flowers, and, absorbed in the occupation, she did not lift her eyes until, as she entered the hall, she walked straight into the blind man's arms, and he held her firmly, but gently, with one hand.

"Fairly caught," said Mr. Brayburn, laughing.

"But he must guess who it is, papa," said one of the children, gleefully; "and Dr. Carewe says he will kiss whoever he has caught."

"But I will not carry out my threat by compulsion," said the blind man, gaily, as he passed his hand gently over Cecil's sleeve as she stood smiling, but very pale, in his grasp. Still, you know it is Christmas-time, and we are under the mistletoe."

"Not quite," laughed Mrs. Brayburn. "Come, doctor, guess what fair lady you have there, and if you guess rightly you shall talk about your reward afterwards."

"I know who it is," said the doctor, bending his tall head over Cecil, with a very kind smile. "I think I meant to catch her—started with the deliberate intention of doing so. Shall I have my reward, Miss Tyrrell?" he added, as he removed the handkerchief from his eyes, and saw that he held—not Lottie Tyrrell, as he had imagined—but Cecil Lester.

There was a momentary silence as their eyes met; then the children's gay laughter rang forth, and Dr. Carewe removed his hand from Cecil's wrist, bowing low.

"I beg your pardon," he said, gravely and coldly.

And Cecil turned haughtily away, and crossing the hall, sat down in a low window-seat, with a flush of wounded pain still on her face.

"Your threat—your threat! You must keep your threat, and take your vengeance, Dr. Carewe!" said half a dozen children, as they danced about him, shrieking with laughter.

But Mrs. Brayburn hastily interposed.

"Dr. Carewe is too generous to take vengeance on a lady," she said, gaily.

And as she spoke, Lawrence Carewe almost involuntarily looked over at Cecil; and as their eyes met, there was the same entreaty in hers, the same contempt in his.

"Who's the next victim?" said Lawrence, coolly. "Shall I sacrifice myself again?"

"I will relieve you, doctor, if you will allow me," said Ernest, coming forward with his usual easy grace. "I am afraid I shall not prove such a generous victor as you have done."

So saying, he submitted to be blindfolded and led into the middle of the hall, where he proved the truth of his prophecy by catching Lottie Tyrrell, and holding her triumphantly under the mistletoe.

"Now, Miss Lottie," he said, smiling into the hazel eyes which drooped beneath his glance, "have you anything to say against my taking my revenge? Have you, Lottie?" he added in a lower voice, bending down.

And the girl grew very pale as she lifted her eyes to his.

"Please do not," she said, tremulously.

And something in her voice and look struck him, and made him, as he loosed her, turn away with a sudden gravity on his own face.

There was no more blindman's buff that afternoon, for the dusk was gathering thickly in the hall, and the servants had entered to prepare the room for snapdragon.

Ernest went over to Cecil's side and sat down with her in the window seat, but both were silent and abstracted. The elders of the party had settled themselves comfortably around the fire. Lottie Tyrrell and Dr. Carewe were standing together. The girl's face was flushed and downcast, her companion's pale and stern, and neither seemed inclined to talk; but Lottie's hand was slipped confidingly through his arm, and his fingers were closed over it. Evidently pretty Lottie and the doctor were great friends.

By-and-by, when the hall was sufficiently dark, the servants brought in the great dish of burning raisins, and the little folks clustered round the table with merry shrieks of laughter and dives for raisins, and Cecil leaned her head wearily against the window-frame, and wondered why the pain at her heart was so strong, and why she felt so unkindly towards pretty, hazel-eyed Lottie Tyrrell.

"You are tired," said Ernest, gently, bending over Cecil.

"I think I am always tired now!" she answered, wearily, as she rose and joined the group round the fire, entering into the discussion with apparent animation; although Ernest, watching her, thought that her eyes were sadder than he had ever seen them, and he sighed at the thought that with all his love, he could not give happiness to this beautiful, brilliant woman who had promised to be his wife.—To be continued.

GLEANINGS.

A YANKEE says that "the man who thinks Poe the greatest American poet must be raven mad."

CONNECTICUT Yankees are making oil barrels out of paper, and the same material will be used for tobacco and sugar barrels.

"LANDLADY," said he, "the coffee isn't settled." "No," she replied, "but it comes as near to it as your last month's board bill does;" and that man never spoke again during the meal.

MR. MOODY'S sermons have been translated into Arabic. Protestant missionaries in Syria read extracts from them every Sunday evening to their converts.

THE aim of education should be rather to teach us how to think than what to think—rather to improve our minds so as to enable us to think for ourselves than to load the memory with the thoughts of other men.—Beattie.

ALL the Nihilists tried for plotting against the life of the Czar of Russia, have been found guilty. Five of them have been sentenced to death and eleven to hard labor in the mines, their terms of punishment ranging from life to fifty years. Three women were sentenced to fifteen years penal servitude.

POSTMASTER General Maynard has directed that all magazines, pamphlets and other like reading matter received at the dead letter office shall hereafter, instead of being sold for waste paper, be distributed to charitable and reformatory institutions in and around Washington.

A YOUNG lady in the country whose beauty formed a matter of general admiration and discussion, in passing a group of officers on the street, heard one of them exclaim as follows: "By heaven, she's painted." "Yes, sir, and by heaven only," she quickly replied. The officer acknowledged the full force of the remark and apologized.

A GLIMPSE OF REMENYI.—When Remenyi touched his violin fondly with the bow it reminded one of a little spring starting out of a nutshell and tripping with sounding footsteps towards the sea. The birds wake up overhead, and come fluttering down to trail their shining wings in the sparkling water, twittering all the while. The stream widened, and, like a ribbon of gold, went flashing through meadows green, past farm-houses where farmers' girls were singing.—Toronto World.

AMONG the improvements at the White House, Washington, which have been in progress during the absence of the President and Mrs. Hayes on the Pacific coast, much praised, is a flooring of encaustic tiles in the large vestibule, into which the main or north entrance opens. This tiled pavement is described as a wholesome relief from a much-soiled and green carpet which did duty there for many years.

THE New York Times says: "Gen. Grant has rented the residence of ex-United States Senator Jerome B. Chaffee, on Fifty-second Street, and will hereafter make his home there. Mr. and Mrs. U. S. Grant, Jr., will also reside at the same place. Ex-Senator Chaffee has taken up his abode at the Union League Club. Mr. and Mrs. U. S. Grant, Jr., will depart for the West in a few days, intending to visit Santa Fe, New Mexico, before their return to New York.

BRIC-A-BRAC.

AUTHORS are spoken of as dwelling in attics, because so few of them are able to live on their first story.

PHILOSOPHY.

What is a tear but water;
What is a sigh but air!
We live to-day, we die to-morrow,
Why should a mortal care?
—Steubenville Herald.

MR. BERGH is appealed to for the relief of animal suffering. The potato bugs in the Far West are freezing to death.—Boston Globe.

A JERSEY, like a coat of mail,
The shapely form incases.
And to a dainty waist can't fail
To add developed graces;
To draw it on requires a knack
Quite easy to attain,
But what a business 'tis, good lack,
To get it off again!

"Is there a letter here in a scented envelope for my wife?" he asked the postmaster, while the green fire from his eyes made the office look like a leafy forest. "Yes, sir," answered the postmaster, as he handed it out. The jealous man tore it open at once, when, lo and behold! it was the milliner's bill for one hundred dollars. The end.

APROPOS to the discussion of sense-perception:

The pharynx now goes up
The larynx with a slam
Ejects a note
From out the throat
Pushed by the Diaphragm."
—Yale Record.

THE Paris Figaro tells a story which Sara Bernhardt tells on herself. When playing in "Ruy Blas," at the Odeon Theater, a fellow threw a loaf of bread at her from the peanut gallery with the remark that he hoped she'd eat it and get a little fatter. The story now circulating about her is that an empty cab drove up to the stage door of Booth's Theatre and Sara Bernhardt got out.

A MAID, as by court records doth appear,
Whom $50,000 made so dear,
Unto her waiting lover sternly said:
"Forego the weed before we go to wed.
For smoke take flame; I'll be that flames bright fanner
To have your Anna, give up your Havana."
The wretch, when thus she brought him to the scratch
Lit his cigar and threw away the match.

WITHOUT AN E.

IT is well known that the letter "e" is used more than any other letter in the English alphabet. Each of the following verses contains every letter of the alphabet except the letter "e:"

A jovial swain should not complain
Of any buxom fair
Who mocks his pain and thinks it gain
To quiz his awkward air.

Quixotic boys who look for joys,
Quixotic hazards run;
A lass annoys with trivial toys,
Opposing man for fun.

A jovial swain may rack his brain
And tax his fancy's might;
To quiz is vain, for 'tis most plain
That what I say is right.

EASILY EXPLAINED.

GILHOOLY got come up with yesterday. He had bought a barrel of apples from De Smith's grocery, which did not give satisfaction.

"What's the reason," said Gilhooly indignantly, "that the further down I go in the apples the worse they get?"

"The reason for that is that you didn't open the barrel at the other end. If you had only done that the apples would be getting better all the time.—Galveston News.

A CHICKEN lived; a chicken died;
His drumsticks and his wings were fried.
His feathers by a dealer dried,
And, very shortly after, dyed.
Soul he had none; admitting that,
How comes it? There upon her hat,
His plumes—a mortal chicken's—rise
A glorious bird of paradise.

THE Chairman of the Committee on Astronomy heaved a deep sigh and reported as follows: "Dis committee am well awar' of de fak dat a comet has recently bin diskivered about 60,000,000 miles on de road to Heaben, an' dat it am now supposed to be approachin' de y'arth at a rapid rate, but de committee sees no speshul occashun to get excited. It will be a month or so before said comet can git here, an' de chances am dat de 'arth will mash it at de fust bump. Dis committee advises de members of de club to git dar' butes tapped, dar' overcoats patched and dar' wood hauled up fur Winter, an' let de comet bizness take keer o' itself."—Free Press.

A COUPLE of old darkies met the other day, and began talking over matters and things. "How is

ole Colonel Jones comin' on, what used to own you before de war? He is so ole he must be gettin' to be childish and losin' his reasonin' powers." "Don't know nuffin' about him. Hain't seen him since befoah last Christmas." "Why, what's de matter?" "Ain't got no use for such old gemmans. Last time I was dar, I fotched him a big red fish I had kotched. I tole him ef he would gimme a tableknife, I would scrape an' clean de fish. What do s'pose he sed?" "Asked yer to come in and get a dram and chat awhile about ole times on de ole plantation." "No, sah. He tole me, ef I couldn't borry a table knife from some ob de neighbors, dat he would radder clean de fish himself. I s'pose he was a-fearcd I'd be keerless in handin' de knife back, when I got done wid it." The other darkey rubbed his chin and remarked: "I see by dat ar dat de ole man's still got de use of his reasonin' powers."

For Women.

CONDUCTED BY MISS RAY CLARK.

THAT'S MY BOY.

Big blue eyes with roguish twinkle;
Dimples ever running riot;
Busy tongue that's never quiet;
Forehead fair, with ne'er a wrinkle;
Clustering hair of sunny hue;
Nose a little snub 'tis true—
That's my boy!

Never ending, still beginning;
Pockets full of dirt and crumbs;
Crazy over horns and drums,
Noise in all things ever winning;
Bragging he of "Jim" is master,
While I run for white court plaster—
That's my boy!

So it goes—some pain some pleasure,
Wondering 'twixt tear and smile,
Will it be thus all the while—
Joy and grief in equal measure?
Shall I cry, in bitter sorrow,
In some dread far off to-morrow,
That's my boy?

Ah, no, no! Mother's eyes look far ahead,
And mine see with tender pride,
By a gray-haired woman's side,
One whom, now that years have sped,
Brave, yet gentle, is her stay:
One of whom she'll proudly say—
That's my boy!

NOVELTIES IN NEEDLEWORK.

Needlework is classed under two heads Useful and Ornamental, or I should rather say was, substituting the past for the present tense, as of late we have had another class, which though coming under the second heading, is yet given a title peculiarly its own, that is, Artistic Needlework—work which more nearly approaches the painter's art than does any other kind; work in which the colors are so beautifully blended, and the idea of the designer is so well carried out that the needle becomes the rival of the brush in a certain sense. For centuries the needle has played an important part in the domestic history of the highest in the land. The most wonderful piece of needlework is probably the Bayeux tapestry, said to have been worked by Matilda, wife of William the Conqueror, which measures two hundred and twenty-seven feet in length by about twenty inches in breadth. The subject is the Conquest of England, and the tapestry is most valuable as a historical document representing as it does so many principal events of that time unmentioned in history. Queen Elizabeth was clever in the use of the needle we are told. Probably she found the occupation soothing to her fiery temper, for it has a wonderful charm, even a long prosy seam being somehow most restful to the mind.

Sewing-machines have done wonders for us; but in proportion to the celerity with which we get over our "plain" work, we find something new in the "fancy" department for which the needle only will answer. Only a few years since we were content with plain hems and seams on our household linen, with simple initials in the corners, marked in red ingrain cotton—even the cotton being superseded in some instances by marking in ink; now we are getting more luxurious, bed linen must be embroidered in colors, and trimmed in the most dainty manner with lace and frilling.

While on the subject of bedrooms, I may suggest one or two novelties for their decoration. A light quilt to throw over the bed in the daytime made at a trifling expense. Almost every housekeeper possesses two or three old linen sheets which have become too thin for actual wear; these make capital foundations for quilts. Choose one much larger than the bed, so that it may hang over the sides; stitch a false hem all round with colored cotton or silk. Get some Turkey red twill, cut into strips about two inches broad; stitch these lengthwise down the sheet at intervals, then add a band of the same all round, about an inch in from the hem, and finish off with an edge of furniture lace. A pattern in wools can be worked on the plain spaces between the red, if liked; and, if the *white* ground of the sheet is disliked, it can be stained the fashionable color by dipping it in clear strong coffee, taking care that every part is well saturated; the lace edging should then be coffee colored as well.

Crochet is looked upon as very old-fashioned fancy work now so many new ideas have taken its place; yet those who are clever at crochet, and who do not take readily to new-fangled notions, need not despair, as some of the prettiest antimacassars of to-day may in part be made from squares of this work, of a pattern as fine and lace-like as possible. As the artistic taste of the time has decreed that white is too cold and hard for decorative purposes, these squares must be "dipped," to give them the tinge of old lace. To the crochet join alternate squares of satin, satteen, silk, or velvet, work over the joins with old gold silk, with a star of the same in the center of each square; border with an edge of crochet, and you have a handsome antimacassar. The silk or satin squares should, of course, be of one color—say, deep red, or rich purple; and, instead of stars, they might have a bunch of tiny flowers embroidered in the center, such as heather, or violets.

Another kind of fancy work, which has somewhat fallen into disrepute, is patchwork. It is undoubtedly fidgety work, as if one side of a diamond, or hexagon, be but the twentieth part of an inch longer than the other, it spoils the whole pattern, and must be picked out at once. Carefully cut shapes in tin are the best guides for cutting the papers, and last a lifetime.

Patchwork ought to rank as art-needlework, for where the worker has an eye for color, knows how to blend her shades well, and to choose pleasing contrasts, the result is beautiful. It can never be merely mechanical work, as a certain amount of invention is necessary as the worker goes on. In Germany it is known as "silk mosaic," a most appropriate name, as it strongly resembles mosaic work. Besides the ornamental qualities of patchwork, it is economically useful, as scarcely a scrap need be thrown away as too small, the tiniest bits of chintzes, cretonne, silk, ribbon, or velvet proving themselves worthy of a place.—Correspondent.

MANNERS.

When, in general conversation, certain opinions are pronounced or propositions advanced at variance with, or in opposition to, your own ideas, do not rush into an argument. A disputatious person is never a favorite. If you do not agree with what is said, it is best to remain silent. Of course, if you are asked for your own opinion, give it clearly and firmly, and yet in a manner that cannot be construed as offensive by those holding different views; and if the matter is one with which you are only partially or not at all acquainted, own the fact rather than slavishly follow what another has said. No one can know everything, and the candid expression that you are not competent to judge in one case will cause your opinion on other points to have all the more weight.

Some people bristle with objections like a porcupine with quills. No matter what is mentioned or proposed, there comes an objection in a moment. Such a habit may be almost unconsciously acquired and indulged in, but it is a very vexatious one.

Should you meet with a person of this temperament do not attempt to defend your own views. He would continue unconvinced; so drop the subject and turn the conversation into another channel.

If a person appropriates to himself the best seat in the room, or stands with his back to the fire, or yawns while he is spoken to, or, in fact, does anything which shows selfishness, indifference, or disrespect, it is needless to say he creates an unfavorable impression, and displays want of proper training.

It is always well to comply with, and defer to, the wishes of others as far as possible. Should a person of greater age or higher rank than yourself desire you to precede him, either in passing through a door or entering a carriage, the proper thing to do is to obey immediately.

Precedence is always given to ladies—so, in ascending or descending a staircase the lady should go first. The contrary is stated in some books on etiquette, but this is not in accordance with the usages of the best society.

At church the gentleman holds open the door, and the lady precedes him up the aisle, stopping at the pew-door for the gentleman to open it. Many ladies, however, do not wait, but open the door themselves and enter at once.

The only occasions when the order of precedence is reversed are on entering a theater or concert-room, or walking along any crowded thoroughfare. The gentleman in these cases goes first to clear the way.

With regard to other cases of precedence, be more solicitous about giving others their position than about taking your own.

A lady should not be permitted to defray the cost of her entrance-fee to any theatre or exhibition, or to pay for refreshments, &c. If she insists upon reimbursing the amount the gentleman must comply with her wishes.

Except in large households, where servants are constantly in attendance in the hall, it is customary, before allowing anyone to leave the room; to ring for the servant to open the front door. Everyone is entitled to the civility, and its omission may cause resentment. Except, of course, when you accompany your visitor to the door yourself, as you would do if you wished to show especial respect or regard, or when you are on such terms of intimacy with your visitor that all formality is dispensed with.

When a lady is about to leave a room the gentleman should always rise and hold the door open for her to pass out.

If you wish to say pleasant things and avoid disagreeable ones, be attentive to the faces, manners habits and appearance of those in whose company you find yourself. A homely but pithy old proverb tells us, "It is not well to speak of the gallows to a man whose father was hanged." Beware, then, how you plunge into personalities or make critical remarks upon the mental shortcomings or personal defects of others. If you are thoughtless and inattentive, remarks which you intend as generalities may be taken to be personal, and great offense given. A person addicted to the habit of passing adverse criticisms upon almost everything is only tolerated, if not shunned—never liked. Do not, therefore, set up for a critic lest your friends should say, "Do not invite ——; she is sure to say something unpleasant to somebody. We must only invite her when we are quite alone."

Many well-meaning and otherwise likeable persons are guilty of this fault, and that only through sheer carelessness or thoughtlessness. The remedy is to take care always to think twice before speaking once.

INTENTIONS.

In response to a request from our friend and contributor, Mrs. A. L. J., and also the outgrowth of a preconceived thought of our own, we will, in the succeeding issue, give cuts of articles suitable for Christmas presents, most if not all of which may be manufactured at home. More or less expense may be incurred in making, according to the taste and pecuniary ability of the makers. It has been our good fortune to visit the establishment of Lord & Taylor, a leading New York house, and although our compositor politely informs us that "no more copy will be received for the current number," we promise a report of this also for next week.

We here take occasion to discourage our friends from sending us poetry, as we have a large stock in store, much of which by necessity, will have to be consigned to the waste basket. Thanking the senders for their good intentions, we suggest that we will be pleased to receive anything else.—R. C.

ABOUT WOMEN.

Miss Genevieve Ward, the actress, speaks very many languages, including Russian.

A Pittsburg paper says that Mary Anderson is billed to play in New York for five weeks in December. It takes the handsome Mary to spin out time.

Miss Parloa has begun her fourth season's work at Lasell Seminary, Auburndale, by an introductory free talk on "Woman's Work."

The daughters of the Duke of Richmond are persistent and successful fisherwomen, and as catchers of salmon are said to be rivaling their countrymen.

Ague, biliousness, drowsiness, jaundice and rheumatism, Hop Bitters removes easily.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

ONE WEEK FROM MRS. CLAY'S JOURNAL.

ANNIE L. JACK.

Sabbath.—I give the children permission to study their hymns from any part they may choose, and sometimes they make a wide range, ambitious Lonsdale giving me a page from Milton, while the girls generally choose Whittier, knowing he is my favorite. To-day Celia came to me to recite one of his most beautiful poems, and I told her the old Quaker was almost a saint already. One verse in particular is full of trust and Sabbath rest:—

"All as God wills, who wisely heeds,
To give, or to withhold,
And knoweth more of all my needs
Than all my prayers have told!"

Karen, who has a fancy for looking into odd corners to find something beautiful I have not seen, came to me with a sweet poem called "Sufficient Unto the Day," and it ended in this wise:—

"And whatever He sends from day to day,
I am sure that His name is Love,
And He never will let me lose my way,
To my *rest* in His home above."

All about this day of rest. I suppose it has often occurred to the reader as well as to myself, that the world would soon become demoralized if the Sabbath was ignored, or if God had gone on improving the world and neglected to rest on the seventh day and hallow it. But in this grand work of creation nothing was forgotten.

We have a habit, when the day is done, of sitting around the open fire and telling in the twilight what we have thought of the day's discourse, or of our readings if we had been housekeeper in our turn. To-night I was greatly amused by Janet's rather original ideas on the subject of the morning service in the Scotch Presbyterian church to which she belongs.

"It's no use talking," said Janet, giving the fender a little push with her foot; "for my part I'm about tired of hearing one woman abused from the pulpit, and that's Lot's wife. She is held up as an example for all ancient and modern times, and yet there was a great deal of good feeling in her that has never been appreciated by clergy or history. I wonder who could blame the poor woman for looking back? for this human act was enough to place her above selfish Lot, who was only intent on self-preservation. It is not recorded that *he* stopped by the way or went hand in hand with her to help her make good speed. But this tender-hearted woman could not lightly leave her home, where she had sojourned so many years, her kinsmen, no doubt, and neighbors, who were to suffer death all together. The fields and flowers and many a pleasant memory of those she loved must have filled her heart, not too intent on self to think of these things, and so she "looked back," as all of us do, to the brightness of the past, and so she became a pillar of salt, a statue of aridity and thirst, to be for ever derided, the butt and warning of all ages. Over her poor, dead face no loving friend ever wept, no requiem was ever sung, no grass could grow, only the wide waste of land where lava encrusted everything, and Lot went on his way and soon forgot her."

We were all used to Janet's talks, and this one was very interesting, as she gave it with a little indignation in her tone, and now and then a breaking out of broad Scotch in her accent. And then she joined the children in the Scotch version of the 23d Psalm, and united sang in low, sweet tones,

"The Lord's my Shepherd, I'll not want. He makes me down to lie,
In pastures green he leadeth me. The quiet waters by."

DOMESTIC RECIPES.

Favorite Pudding.

One-half cup of butter, one cup of sweet milk, three eggs, whites and yelks beaten separately, two teaspoonfuls of cream-of-tartar, flour to make a stiff batter; steam until done. Serve immediately, with sauce made as follows:—One pint of boiling water, one cup of sugar, butter the size of an egg, and one wine glass of wine. Thicken with corn-starch. A pudding made like the above, and baked with fruits, canned peaches, jam, marmalade, or whatever is preferred, spread over it, is very nice indeed.

Vanity Cakes.

Yelks of eight eggs and one cup of sugar. Knead with flour, and fry in hot fat. Roll them and cut in fancy shapes before frying.

Cracker Pie.

To a common-sized tin, allow one cup of cracker crumbs, one-half pint of water, one teaspoonful of tartaric acid, one cup of sugar and spice to suit the taste. Bake with two crusts.

Frosted Apple Pie

Line a pie tin with puff paste. Slice in apples, sugar them and add a little butter, no water, and a little lemon essence or juice. Bake and when done spread a thick frosting of beaten egg and sugar over it, return to the oven till the frosting is warmed through.

Mrs. L. E. K. Turner.

Apple Short Cake.

Slice enough tart apples to fill two round pie-tins. Make a crust out of one teacupful of sour cream, a teaspoonful of soda, a little salt and flour to roll out. Roll out upper crusts, fit over the apples and bake. The fruit should be juicy and no water added. When done, turn bottom upwards, sprinkle over sugar and a few bits of butter, turn back again, pile one on the other and serve warm with cream or as you please. J. C.

To Dry Sweet Potatoes.

A good way to preserve sweet potatoes for future use when they show signs of decay, is to dry them in the same manner as you would any fruit. Boil, peel and slice quite thin and dry on plates around the fire. When wanted for the table, put the quantity desired into a *closely covered* tin or porcelain stew-pan—iron darkens them—with but little water, not enough to cover them, and let *simmer* two or three hours. When done the water should have evaporated, or what little there is left should be of the consistency of sirup. Mash and serve as you would Irish potatoes, omitting the milk.

Mary B.

Boiling Milk.

The source of the scarlet fever epidemic near London was traced by Dr. Stevenson, a medical officer of health, to the milk sent there from two farms in Oxfordshire. Scarlet fever had previously prevailed in Oxfordshire, and the milk sent out from there was found to contain the infectious germs. The doctor advises all who have the care of invalids or infants to boil their milk before using it. We are not in favor of sounding useless alarms, but in the case of infants or delicate persons we think it as well to boil the milk before giving it, especially when it may come from several cows.

A Mold of Cold Meat.

A pound or a little more of cold meat—beef, mutton, anything except pork—two ounces of maccaroni, one teacupful of fine bread crumbs, a tablespoonful of butter, one egg, pepper and salt. Cut the meat very fine. Wash the maccaroni in cold water then boil for half an hour drain and cut into inch-lengths. Mix with the meat crumbs, butter pepper and salt, mix thoroughly, bind together with the beaten egg and pack into a well-greased basin or bowl and steam for an hour. This is very nice for breakfast or tea, sliced and eaten cold. J. A. L.

Stewed Kidneys.

Three kidneys, cut each into three or four lengthwise pieces, a cup of stock, liquid meat has been boiled in, a teaspoonful of minced onion, pepper and salt to taste and two tablespoonfuls of melted butter. Simmer 15 minutes add juice of half a lemon, skim out the slices of kidney and arrange on thin slices of toast. Thicken the gravy with a spoonful of browned flour and pour over all.

Farmer's Wife.

Boils, Pimples, Freckles, Rough Skin, eruptions, impure blood, Hop Bitters cure.

The Literary Revolution.

Holiday Time.

Books are the most sensible holiday presents. The standard books of the "Literary Revolution," costing but a fraction of what the same books formerly cost, will be in such enormous demand at holiday time that thousands who will want them will probably be disappointed, because the demand will be greater than the supply. We are now able to manufacture about 8,000 volumes a day, but we cannot promise to fill all orders in December. You will do wisely to make your selections and order what you want, *immediately*, directly from us or from the agent for our publications in your town. If no agent there, *raise* a club.

In January, 1879, "The Literary Revolution" was inaugurated by the publication of one small volume. At present, its list, published and in preparation, comprises nearly 175 volumes of standard books. It gives employment to about 500 hands, and now has facilities for delivering to purchasers over five tons of books a day. To meet the popular demand for the coming twelve months at least 2,000,000 and probably 3,000,000 volumes will be required. The almost wonderful success which the "Revolution" has achieved is doubtless to be attributed to its leading principles, which are:

I. Publish only books of real merit.

II. What is worth reading is worth preserving—all books are neatly and strongly bound.

III. Work on the basis of the present cost of making books, which is very much less than it was a few years ago.

IV. Books have commonly been considered luxuries; in a free republic they ought to be considered necessities, and the masses will buy good books by the million if prices are placed within reach.

V. To make $1 and a friend is better than to make $5 only, and 1000 books sold at a profit of $1 each give a profit of only $1000, while 1,000,000 books sold at a profit of one cent each give a profit of $10,000; and it is more pleasure as well as more profit to sell the million.

Is it "A Grand Swindle?"

A correspondent writes: "I read your advertisement in the last two numbers of the *Cincinnati Weekly Enquirer*, and immediately set you down as *a grand swindle*. It does look as though it were impossible to sell books so cheaply."

Verdict of the Jury.

Has some rich relative left you a colossal fortune which you are spending in publishing books for the people at nominal prices? If so, I admire your taste. But won't the old-line publishers be glad when it is gone?—B. F. COSGROVE, Randolph, N. Y.

I saw an article in one of the magazines calling you "Cheap John Publishers," "Pirates," &c., and calling for an international copyright. But you can be consoled with the fact that those who are for you are more than those who are against you.—C. N. DAY, Spencer, N. Y.

It is a mystery which we will not attempt to explain, how the AMERICAN BOOK EXCHANGE can afford to publish such a remarkably cheap series of books as they are now getting out. Other publishers may be inclined to sneer at them, but so long as the EXCHANGE publishes a book at one tenth the cost at which it is offered elsewhere, sneers cannot hurt them.—*Courier-Journal*, Louisville, Ky.

We were surprised into incredulity by the announcement that Geikie's Life of Christ had been published by the AMERICAN BOOK EXCHANGE for fifty cents, well printed and strongly bound in cloth. But we have procured the volume and find it even so. We confess ourselves greatly interested in what the publishers call the "Literary Revolution." To see standard works of the highest value furnished in readable and pleasant form at so cheap a rate, is a consummation we rejoice in having lived to witness.—REV. J. A. BROADUS in *Religious Herald*, Richmond.

Nothing so interesting to booksellers and book buyers has occurred of late as the "revolution" in prices in which the AMERICAN BOOK EXCHANGE leads.—*Advance*, Chicago, Ill.

The books are received. I am well pleased with them. Your company is worth more to the common people than the Peabody Fund. It makes me feel good to look at your catalogue. You deserve the praises of all classes of the people. Considering the past prices of books and the prices at which you now are publishing them, there must have been something "rotten in Denmark."—Z. B. WAESER, Yadkin College, North Carolina.

Thousands of blessings on the man who invented printing, thousands more for him who uses that invention for the benefit of his fellow countrymen—which you are surely doing in your cheap and *good* books. The books which I have received from you are wonderful volumes for the money. I wish that you may be long in the land.—D. B. COSKLEY, Pastor Congregational Church, Whitewater, Wis.

A. W. L., Lewisville, Ark.: "Tell me something about the inclosed advertisement of books for sale. Can these books be bought for the price for which they are advertised? Are they good for anything? Where does the swindle come in?" There is no swindle about it. The AMERICAN BOOK EXCHANGE are trustworthy, and we believe will sent just what they advertise.—*Weekly Sun*, N. Y. City.

We can only repeat our hearty commendation of a scheme which places in the hands of the people the best literature at a merely nominal price.—*Traveller*, Boston.

The day of cheap and good books is once more with us, and the AMERICAN BOOK EXCHANGE merits the praise for it.—*Episcopal Register*, Philadelphia, Pa.

At these rates any man may, and every man should, have a library.—*The Alliance*, Chicago, Ill.

One can but wonder how such a book can be printed for such a price.—*Times*, Carrollton, Ga.

Is doing wonders in book-making. A few dollars will purchase a good library. We pronounce them the best books for the money that ever came to our notice. *The Watchman*, Boston.

It is a matter of wonder how such books, in firm binding with good paper and good type, can be offered at such a price. That is, however, the publishers' affair; what concerns readers is that . . . standard works are placed thus within the reach of every person, no matter how short the cash."—*The Standard*, Chicago, Ill.

Library of Universal Knowledge.

Large Type Edition. A verbatim reprint of the last (1880) London edition of Chambers's Encyclopedia, with copious additions (about 15,000 topics) by American editors; the whole combined under one alphabetical arrangement, with such illustrations as are necessary to elucidate the text. Printed from new electrotype plates, brevier type, on superior paper, and bound in fifteen elegant octavo volumes of about 900 pages each. It will contain, complete, about 10 per cent more than Appleton's, and 20 per cent more than Johnson's Cyclopedias, and, though in all respects important to the general reader it is far superior to either of them, its cost is but a fraction of their price. Volumes I. to VI. are now ready, and other volumes will follow at least two each month, the entire work being completed by April, 1881, and probably sooner. Price per volume, in cloth, $1.00; in half Russia, gilt top, $1.50; postage per volume, 21 cents. It has been our custom in previous publications to offer special inducements to those whose orders are soonest received. In pursuance of that policy, *on or before December 31 only* we will receive orders, with cash, for the set of 15 volumes complete for the nominal price of $11.00 for the edition in cloth, and $16.50 for the edition in half Russia, gilt top. The price during December will be advanced to $11.50 and $17.25, and a further advance will be made each month till the work is completed. Volumes will be shipped as may be directed, as soon as they are issued, or when the set is complete.

Library of History.

In our historical library we propose to present the works of those great authors whose writings have themselves become a part of history, and are associated in the minds of all well-informed readers with the nations whose history they narrate. The following are now published:

Milman's Gibbon's Rome.

History of the Decline and Fall of the Roman Empire. By Edward Gibbon. A new edition, with the notes of H. H. Milman, and a very full index. In five volumes, bourgeois type. Price per set: Acme edition, cloth, $2.00; postage, 57 cents. Aldus edition, half Russia, gilt top, $4.00; postage, 52 cents.

Macaulay's History of England.

History of England from the Accession of James II. By Thomas Babington Macaulay. In three volumes, brevier type, with full index. Price per set: Acme edition, cloth, $1.25; postage, 21 cents. Aldus edition, half Russia, gilt top, $2.50; postage, 32 cents.

Rollin's Ancient History.

Ancient History of the Egyptians, Carthaginians, Assyrians, Babylonians, Medes and Persians, Grecians and Macedonians, including a history of the arts and sciences of the ancients. By Charles Rollin. In one quarto volume, 1318 double-column pages, small pica type. Price, cloth, $1.75; half Russia, sprinkled edges, $2.25. Postage, 42 cents.

Comic History of the United States.

By L. Hopkins. Copiously illustrated by the author from sketches taken at a safe distance. Long primer type, leaded. Price extra cloth, illuminated, 50 cents; postage, 6 cents.

The following well known standard books will be added to our list as rapidly as the public demand and our very large facilities for manufacture will permit:

Grote's History of Greece, from the earliest times to the death of Alexander.
Mommsen's History of Rome, from the earliest time to the period of its decline.
Green's larger history of the English People.
Masson's Guizot's History of France.
Carlyle's History of the French Revolution.
Menzel's History of Germany.
Schiller's History of the Thirty Years' War.
Creasy's Fifteen Decisive Battles of the World.
A History of the United States, by an eminent historian, is in preparation.

Revolution Pamphlets.

Only books of the highest class are published by us, and the prices are low beyond comparison with the cheapest books ever before issued. To illustrate and demonstrate these truths, we send the following books, all complete and unabridged, post-paid, at the prices named:

Macaulay's Life of Frederick the Great. Former price, $1.25. Brevier type, price three cents.
Carlyle's Life of Robert Burns. Former price, $1.25. Large brevier type, price three cents.
Light of Asia. By Edwin Arnold. Former price, $1.50. Beautiful print, brevier type; price five cents.
Thos. Hughes's Manliness of Christ. Former price, $1.00. Beautiful brevier type; price three cents.
Mary Queen of Scots' Life, by Lamartine. Former price, $1.25. Brevier type, price three cents.
Vicar of Wakefield. By Oliver Goldsmith. Brevier type, beautiful print; price five cents.
Bunyan's Pilgrim's Progress. Bourgeois type, leaded; beautiful print; price six cents.

Library of Classic Fiction.

In this series of volumes we propose to present in our handy and beautiful "Acme" style at cost so low that even provident schoolboys can well afford to possess them, a representative and characteristic work of each of the great authors who have won classic fame in the realm of fiction. Not to know them is to be ignorant of much that is most important and most interesting in the history of nations and of men. Not to possess them is to be deprived of most fruitful and profitable sources of enjoyment. Life is too short and too full of work to permit the reading of all that is beautiful and valuable in these creations of the imagination, but even very busy people can find time to read *one* book by each of the score of authors who rank so high among the world's great ones, and have won immortal fame and place in the affections of the people.

The volumes will be uniform in size and style, brevier type, well printed, and neatly and strongly bound, in cloth. The following are ready or in press, and to be issued at the date affixed:

Adventures of Don Quixote. Translated from the Spanish of Cervantes, by Motteaux, with 16 full-page characteristic, humorous illustrations, by Hopkins. Price, 50 cents; postage, 9 cents. *Now ready.*

Uarda. A Romance of Ancient Egypt. By George Ebers. Translated from the German by Clara Bell. Price, 35 cents; postage, 7 cents. *Ready November 30.*

Tom Brown at Rugby. By Thomas Hughes. Price, 30 cents; postage, 6 cents. *Ready December 2.*

Romola. By George Eliot. Price, 35 cents; postage, 7 cents. *Ready December 8.*

The two following are already issued, not uniform in size and style with the others, but in large type (long primer), and 12mo form:

Ivanhoe. By Sir Walter Scott. Price, 50 cents; postage, 8 cents. *Now ready.*

Last Days of Pompeii. By Sir Edward Bulwer Lytton. Price, 50 cents; postage, 8 cents.

The following famous works will be added to the series in uniform "Acme" style as rapidly as the demands of the public and our facilities of manufacture will warrant:

Dickens's David Copperfield.
Thackeray's Newcomes.
Victor Hugo's Les Miserables.
Kingsley's Hypatia.
Goethe's Wilhelm Meister.
LeSage's Gil Blas.
Washington Irving's Knickerbocker.
J. Fenimore Cooper's Last of the Mohicans.
Jean Paul Richter's Titan.
Madame de Stael's Corinne.
Turgenieff's Fathers and Sons.
George Macdonald's Alec Forbes.
Mrs. Mulock Craik's John Halifax, Gentleman.
Charlotte Bronte's Jane Eyre.
Charles Reade's Love Me Little, Love Me Long.

Religious Literature.

Concordance to the Bible.

Young's Analytical Concordance to the Bible, with every word alphabetically arranged, showing the Hebrew or Greek original, its meaning and pronunciation; with 311,000 references, 118,000 beyond Cruden; marking 30,000 various readings in the Greek New Testament; with the latest information on Biblical geography and antiquities of the Palestine Exploration Society. Designed for the simplest reader of the English Bible. In one quarto volume, about 1100 three-column pages, nonpareil type. Price:

Popular edition, strongly bound in cloth, $2.00; in half Russia, sprinkled edges, $4.50. *Now ready.*

Scholars' edition, on extra fine and heavy paper, with very wide margins, allowing the opportunity for making marginal notes. *Ready December 15.*

Life and Works of Christ.

By Cunningham Geikie, D.D. Complete, with a full index. Brevier type. Price: Acme edition, cloth, 50 cents; postage, 9 cents. Aldus edition, half Russia, gilt top, $1; postage, 13 cents.

Kitto's Cyclopædia of Biblical Literature.

In two large octavo volumes, brevier type, illustrated by many hundred engravings on wood. Price, per set, cloth, $3; half Russia, gilt top, $5; postage, 36 cents.

Smith's Bible Dictionary.

A new edition, a verbatim reprint of the last English edition of Smith's Smaller Dictionary of the Bible, comprising its antiquities, biography, geography, and natural history. This edition has not heretofore been published in this country for less than $3. Price: Acme edition, cloth, 50 cents; half Russia sprinkled edges, 75 cents; postage, 10 cents.

Works of Flavius Josephus.

Comprising the antiquities of the Jews, a history of the Jewish wars, and a Life of Josephus, written by himself, translated by William Whiston, together with numerous explanatory notes, etc. In one quarto volume, 1112 double-column pages, pica type. Price, cloth, $1.50; half Russia, sprinkled edges, $2; postage, 28 cents.

The Koran of Mohammed.

Translated into English from the Arabic by George Sale. Brevier type. Price: Acme edition, 30 cents; postage, 5 cents. Aldus edition, half Russia, gilt top, 60 cents; postage, 8 cents.

Library of Biography.

In our Library of Biography we present the stories of famous lives as told by authors almost equally famous.

There is properly no history, only biography.—*Emerson.*

Biography is the most universally pleasant, universally profitable of all reading.—*Carlyle.*

The following have thus far been published, and of some of them we have already sold nearly a hundred thousand copies:

Acme Biography—First Series.

Twelve books in one volume for less than half the price formerly charged for each separately. Brevier type, Price, Acme edition, cloth, black and gold, 50 cents; postage, 9 cents. Aldus edition, half Russia, gilt top, $1; postage, 13 cents:

I. Frederick the Great—Macaulay.
II. Robert Burns—Carlyle.
III. Mahomet—Gibbon.
IV. Martin Luther—Bunsen
V. Mary, Queen of Scots—Lamartine.
VI. Joan of Arc—Michelet.
VII. Hannibal—Arnold.
VIII. Cæsar—Liddell.
IX. Cromwell—Lamartine.
X. William Pitt—Macaulay.
XI. Columbus—Lamartine.
XII. Vittoria Colonna—Trollope.

Acme Biography—Second Series.

Five books in one volume, neither of which has heretofore been published in this country at less price than 75 cents each. Brevier type. Price: Acme edition, cloth, 40 cents; postage, 8 cents. Aldus edition, half Russia, gilt top, 80 cents; postage, 12 cents.

I. Chaucer—R. W. Church.
II. Spenser—A. W. Ward.
III. Milton—Mark Pattison.
IV. Cowper—Goldwin Smith.
V. Southey—Edward Dowden.

Acme Biography—Third Series.

Five books in one volume, neither of which has heretofore been published in this country at less price than 75 cents each. Brevier type. Price: Acme edition, cloth, 40 cents; postage 8 cents. Aldus edition, half Russia, gilt top, 80 cents; postage, 12 cents.

Defoe—William Minto.
Johnson—Leslie Stephen.
Goldsmith—William Black.
Scott—Richard H. Hutton.
Thackeray—Anthony Trollope.

Macaulay's Life and Letters.

Life and Letters of Lord Macaulay. By his nephew, George Otto Trevelyan, Member of Parliament. Complete in one volume, 12mo, brevier type, leaded. Price, cloth, 50 cents; half Russia, gilt top, 75 cents; postage, 10 cents.

The following will be rapidly added to our list, at prices equally low with the above:

Plutarch's Lives of Illustrious Men. A new edition, containing biographies of twenty-eight men who helped to make the world's history, from Lycurgus and Romulus to Cæsar and Cicero. Complete in one volume, brevier type, over 1000 pages. Acme edition, cloth, 50 cents; postage, 11 cents. Aldus edition, half Russia, gilt top, $1.50; postage, 15 cents. *Ready January 10.*

Eminent Americans. Brief Biographies of eminent Americans, with over 100 portraits. By Benson J. Lossing, LL.D. Large 12mo, brevier type, leaded. Cloth, extra, $1.00; half Russia, gilt top, $1.50; postage, 12 cents. *Ready in January.*

Brief Biographies. By Samuel Smiles.
Carlyle's Life of Oliver Cromwell.
Carlyle's Life of Frederick the Great.

The World's Great Poets.

It is of course impossible to print all the good books in one day, even if our friends are ready to order and pay for them with consummate liberality; but in our efforts to meet the demands upon us for the grand old standards, and the few modern works which are taking rank with them, we have taken note of the universal want for handy, beautiful, and cheap editions of the world's great poets. We give below some of the titles which we have thus far been able to reproduce in our incomparably cheap editions.

Shakespeare's Complete Dramatic Works.

New large type, 1 vol. edition. A very careful and accurate reprint of the famous Globe edition, with a copious glossary. Acme edition, cloth, $1.50; postage, 30 cents. Aldus edition, half Russia, gilt top, $3; postage, 42 cents.

The following of Shakespeare's most popular plays are being issued in separate pamphlets, uniform in type and size of pages with the bound volumes. Price three cents each, post-paid.

1. The Tempest.
2. Much Ado about Nothing.
3. A Midsummer Night's Dream.
4. The Merchant of Venice.
5. As You Like It.
6. King John.
7. King Henry V.
8. King Richard III.
9. King Henry VIII.
10. Romeo and Juliet.
11. Julius Cæsar.
12. Macbeth.
13. Hamlet.
14. King Lear.
15. Othello.
16. Antony and Cleopatra.

Milton's Complete Poetical Works.

With a sketch of his life. Long primer type. Price: Acme edition, cloth, 40 cents; postage, 7 cents. Aldus edition, half Russia, gilt top, 80 cents; postage, 10 cents.

Works of Dante.

The Vision, or Hell, Purgatory, and Paradise. Translated from the Italian by H. F. Cary, A.M. With a chronological view of the age of Dante, and very full notes. Long primer type. Price: Acme edition, cloth, 50 cents; postage, 6 cents. Aldus edition, half Russia, gilt top, 60 cents; postage, 8 cents.

Works of Virgil.

Translated by John Dryden. Brevier type. Price: Acme edition, cloth, 30 cents; postage, 6 cents. Aldus edition, half Russia, gilt top, 60 cents; postage, 8 cents.

The Light of Asia.

By Edwin Arnold. A new edition. Brevier type. Price, extra cloth, 25 cents; postage, 4 cents.

Homer's Iliad.

Translated by Pope. Brevier type. Price, Acme edition, cloth, 30 cents; postage, 6 cents. Aldus edition, half Russia, gilt top, 60 cents; postage, 8 cents.

Homer's Odyssey.

Translated by Pope. Brevier type. Price: Acme edition, cloth, 30 cents; postage, 6 cents. Aldus edition, half Russia, gilt top, 60 cents; postage, 8 cents.

Mrs. Heman's Poetical Works.

Complete in one large octavo volume. Nonpareil type; with a critical index. Price, cloth, 60 cents; half Russia, gilt top, 90 cents; postage, 13 cents.

"Acme" and "Aldus" Editions.

These editions of our books are printed from electrotype plates, 3½ inches wide by 5⅝ inches high. For the *Acme* editions we use light but good quality of paper, and print clearly and bind strongly, as will please those who buy books for their contents, and want the least money to do the greatest possible service. The *Aldus* editions are printed from the same plates, but more carefully, on heavier and generally on finer, more expensive quality of paper, with much wider margins to the page, and are very elegantly, as well as very strongly, bound in half Russia, gilt top. In this style they compare favorably, if they do not even contrast favorably, with the best editions of the same books which have ever been issued.

Terms to Clubs. In places where no bookseller acts as sole agent, terms to clubs are allowed as follows, 10 per cent discount on 5 copies of one book, or on 10 copies selected from the list; 15 per cent discount on 10 copies of one book, or on 25 copies selected from the list.

Terms of payment, invariably cash with the order—to millionaire and school-boy the same. Remit by bank draft, money order, registered letter, or by express. Fractions of $1 may be sent in postage stamps.

JOHN B. ALDEN, Manager.

AMERICAN BOOK EXCHANGE,
Tribune Building, New York.

News of the Week.

HOME NEWS.

MONDAY, Nov. 29, 1880.

Governor James D. Williams, of Indiana, died at Indianapolis on Saturday, Nov. 20, aged nearly 73 years. Gov. Williams was born in Pickaway County, Ohio, from which place his parents removed at an early date to Knox County, Indiana where Governor Williams has continued to reside and to be recognized with the best interests of the State since its organization. Since 1841 Governor Williams has been in one way or another in public positions, but always maintaining the same quiet demeanor and homely garb of homespun which has given him the name of "Blue Jeans." Gov. Williams, like President Lincoln, was tall and ungainly, being six feet four inches in hight, but one of those sturdy, honest yoemanry to which the early progress and prosperity and good society of the new nation of the West are largely due..... Isaac P. Gray, who, as Lieutenant Governor of Indiana, succeeds Governor Williams, is a native of Chester County. His retiracy from the Presidency of the Senate leaves that body a tie, and will make a probable dead-lock in the organization of the Legislature.....The statue of General Daniel Morgan, the "Hero of Cowpens," has been completed by J. Q. A. Ward, the sculptor, and left on the 24th in plaster for Philadelphia to be cast in bronze. It is eight feet and a half in hight, and will surmount a granite column of 16 feet at Spartansburg, S. C. The unveiling, which was to have taken place on January 16, 1881, the centennial anniversary of the battle, has been postponed to April 15. The statue will be ready in bronze on February 22.....Professor James C. Watson, the distinguished astronomer of Wisconsin State University, died on the 23d at Madison, Wis., aged nearly 42 years. He was born of American parents in Elgin County, Ontario, January 28, 1838, spent his boyhood in Michigan, graduated at the University of Michigan, Ann Arbor, in 1857, became a teacher of mathematics there and assistant at the observatory, was appointed Professor of Astronomy in 1859, of physics and mathematics in 1860 and Director of the Observatory in 1863, discovered 18 asteroids, for which he was awarded, in 1870, the gold medal of the French Academy of Sciences; observed great eclipses of the sun at Burlington, Iowa, in 1869, and in Sicily in 1870, and was at the head of the very successful American expedition which went to Pekin, China, in 1874 to observe the transit of Venus, on which occasion he was accompanied by his wife. He discovered while at Pekin a new asteroid which he named after a Chinese goddess, Ne-Wha, celebrated as having once repaired the heavens when they had fallen into ruin. In 1878 Professor Watson observed the great solar eclipse from a station in Wyoming and was prominently connected with the discovery of an intra-Mercurial planet. A year or two ago he was made director of the splendid new observatory at Madison, Wis., endowed by private liberality on condition of securing his services. Besides astronomical charts and numerous monographs, he was author of "A Popular Treatise on Comets" (1860) and "Theoretical Astronomy" (1868), which treated of the motions of the heavenly bodies revolving around the sun in connection with the law of universal gravitation, and illustrated by numerical examples and auxiliary tables.

The N. Y. Commercial Bulletin advises the consolidation of three Northern New England States into one State, thus saving the expense of so many organizations This bids fair to start a discussion of the whole question of State consolidation, the lesser with the larger or adjoining States, that natural boundaries rather than arbitrary divisions be considered. This would unite all New England into one, not very large State, and give New Jersey, Delaware and Maryland to the adjoining States.....The vicinity of Kingston, Tenn., has just been the scene of a most sad occurrence. On the 17th was celebrated the marriage of Joel Hembell, well known in that county, and Miss Dail, an accomplished daughter of Colonel Dail, at whose residence about forty ladies and gentlemen had assembled. Subsequently a reception was tendered the couple and extensive arrangements had been prepared for their entertainment. By some means in preparing the feast arsenic was used instead of soda. About forty persons immediately after supper was served, exhibited symptons of sickness, and five of the number have since died. The father of the bride, who was not expected to live, is reported better. About thirty other persons who were present are reported seriously ill, a number of whom will probably die from the effects of the poison. The poisoning is thought to have been accidental.

A terrible murder was committed at No. 67 Lewis Street, N. Y., on the evening of the 10th. Andrew J. Gillen sought the hand of Mary Segerson in marriage, but the brothers opposed the match. Gillen called on Miss Segerson, but she told him to leave the house. He asked for a glass of water, and when the girl returned with it he caressed her and said, "Mary, I love you." At the same moment he drew a revolver and shot her through the head, killing her instantly. The murderer immediately disappeared, and it is said threw himself into the East River.

M'lle. Bernhardt, a prominent Parisian actress, who has created considerable sensation in Paris and London during the past six months, commenced an engagement at Booth's theater in this city last week, and received one of the largest ovations ever accorded to an actress. She comes under an engagement with Mr. Abbey, theatrical manager, and it is said will make the tour of the United States during the early Winter. A considerable number of her paintings and pieces of sculpture are on exhibition at the Union League Club and their merits variously considered. The discussion of her probable influence upon society promises to be the topic of interest for the Winter.

Chicago is the only one of the five largest cities in the United States, the others being New York, Philadelphia, Brooklyn and Boston, in which the males are in excess of the females by the present census. In New York the excess of females has decreased since 1870, in the other three cities it has increased, almost doubling in Boston, a circumstance due doubtless to the annexation of suburban districts. The total excess of females over males in the four Eastern cities mentioned is 100,912. San Francisco is probably the only large city in the country besides Chicago in which the males are in a majority, owing perhaps to the Chinese.....Unprecedented cold weather has been experienced all over the country. The mercury stood 24° below zero at Hanover, N. H., on the 22. The Hudson river is blocked with ice and continually freezing at and above Coxsackie, N. Y. There was good skating at Saugerties. The Erie canal continues frozen at Syracuse. The ice is two inches thick on the canal at Buffalo. Monday night was the coldest for years at Danville, Va., the thermometer Tuesday morning standing 17° above zero. Lake St. Clair has completely closed at Detroit, Mich. The sudden blockade has caught a large fleet of loaded vessels on the chain of lakes, 74 bound from Buffalo to Chicago being frozen up at different points. The thermometer dropped to 25° below zero at Winnipeg, Manitoba, Tuesday. In Vermont and New Hampshire snow, and some sleighing have been reported. In Michgan and Wisconsin the snow is deep enough for the lumberman to begin logging.

The result of the Mississippi River Improvement Convention at New Orleans on the 16th and 17th, has been to awaken a very important industrial question all along the line of that river. It is claimed from New Orleans that the latitudinal movement of commerce across the continent is artificial and unnecessarily expensive; and that in the nature of things the *drift* must bear the call over the *pull*, and that eventually the business relations of the United States must be reconstructed on that basis.....The contracts have been awarded for the construction of the New Orleans Pacific Railroad from Shreveport to the Mississippi River at Bayou Goula, and work has been commenced. Four thousand tons of rails have been purchased, to arrive at the mouth of the Mississippi before January 1st.

Congress meets Dec. 6th, the first Monday of the month.....President Hayes will sail for Europe next May, according to the Chicago Inter-Ocean. .... The land-league organizations forming in New England are alarming the Canadians, who scent another invasion. The Quebec authorities are evidently preparing for the worst, as they have recently received 10,000 stand of arms and have 2,000,000 rounds of rifle ammunition in the city magazine.....Edwin Booth has telegraphed a protest against the presentation of the Passion Play at the theatre which bears his name, but over which he long since ceased to exercise control. The play is not to be produced.

The statue of Alexander Hamilton, a gift of John C. Hamilton, his son, was unveiled in Central Park, N. Y., on the 22d, before many spectators, including the Society of the Cincinnati, the St. Andrew Society, the Society of Engineers, the St. Nicholas Society, the Hamilton Literary Society, and other organizations. John C. Hamilton made the presentation address, and Mayor Cooper accepted the statue on behalf of the city. Secretary Evarts was expected to deliver an oration on the life and public services of Hamilton, but had to return to Washington before the coremonies.....

The remains of six unidentified victims of the St. Peter, Minn., asylum fire were buried on the 19th. No more missing patients have reported, and it is feared that all reported missing are dead. The list of dead now numbers 32..... "One of the most remarkable traits of this peculiar people in Alaska is their aversion to salt, which they will not eat in any form. I have seen them, when offered a choice piece of corned-beef on the vessel, taste it, and, on finding that it had been salted, spit out the mouthful with a wry face and throw the remainder on the deck in disgust. No matter how putrid a whale or seal may be, they eat it, raw and unseasoned, with evident relish"..... Detroit is forming a company to build the Fontaine locomotive, which some railroad men think will revolutionize the construction of locomotives. The Fontaine engine differs from the standard engine in having the power applied by a single rod on each side running from the cylinder to a large drive wheel immediately above the front driver on the ordinary locomotive. The upper drive wheel is of the same diameter as the lower, but it bears upon a flange several inches smaller than the lower driver, and thus brings into play the principle of large and small pulleys in the driving of ordinary machinery. The Fontaine locomotive also has no dead centers, for the lower driver acts as a huge balance-wheel, carrying the upper wheel past the point where power is lost.

Reports made to the Health Commissioners of Chicago show that diphtheria is spreading in that city very rapidly, and it is stated that the disease is more violent than usual, whole families in some cases being taken sick. The presence of the disease, in many instances, is charged to defective sewerage, and landlords are being compelled to put their houses in good sanitary condition in this respect.....Four months ago a band of outlaws kept the citizens of Fort Pierre, Dakota, a town on the east bank of the Missouri River, in terror till the respectable portion of the community organized a vigilance committee, with the determination of ridding the place of the roughs. Last week the two opposing forces came together, both strongly armed. A fight ensued, resulting in the killing of Arkansas Joe, the leader of the gang, and the wounding of four others. The vigilants escaped unhurt.....Edward Dangan's two daughters, four and seven years old, died Sunday at Kankakee, Ill., from poisoning, and two other children are in a critical condition. Dangan arrived two weeks ago bound for Canada, and has been living in the utmost poverty. He says the children's mother died several weeks ago. A bottle of belladonna was found in the house and Dangan will be arrested, pending the coroner's investigation.

Thomas Hastings, Cassius Nephew, John Ripon, H. Tibbetts, and a boy named Schoemaker were seriously burned by an explosion of powder, at Palmer's Sons' fire works factory, at Rochester, N. Y., the powder being fired by a hot coal on the bottom of a boy's shoe. The boy broke the rules of the establishment by going within the guard-rail above the stove, opening the stove and putting his feet beneath the grate to warm them.....H. S. Maxim, a New York engineer, has invented an electric light and formed a company, which agrees to light the city post-office for $10,000 a year less than has been spent for gas. This light is said to neither flicker nor dazzle, and is very much like Edison's in appearance—a glass bulb, about the size of an egg, enclosing a bit of carbon, which attains a white heat in an atmosphere of gasoline vapor when the electric current passes.....The Department of State at Washington declines at present to furnish any particulars concerning the newly-concluded treaty on the subject of immigration between the United States commissioners and China. It is understood, however, that Secretary Evarts regards the provisions of the treaty as highly satisfactory, and covering the whole subject of Chinese immigration into this country..... White Eagle and a delegation of Poncas are shortly to visit Washington to make arrangements for the removal of the tribe to the Indian Territory.

[St. Louis Evening Chronicle]

People in Glass Houses, etc.

While it may be proper that those "living in glass houses should never throw stones," we think it is eminently proper that those working in glass houses should say a "good word" for anything of benefit to themselves. In this connection, Mr. Isaac Correy, Manager Salem, N. J. Glass Works, remarks: I am pleased to say that I have used the Great Remedy, St. Jacobs Oil, for Rheumatism, with excellent results; other members of my family have also been greatly benefited by its use.

FOREIGN.

In Ireland the agrarian agitation is still kept up at red heat. Things seem to be drifting to a crisis fromwhich the only outcome will be a Fenian rising. The attention of Europe is now directed to the condition of things in that unhappy island, and doubtless other nations are chuckling at the sight of a British Venetia, or Bulgaria, or Poland, where oppression and discontent are as rife as in those foreign dependencies whose sad fate England is accustomed to bemoan. Were it not for the strong military force now in the West of Ireland anarchy would be everywhere prevailing in that section. This morning's cablegram says that the first battalion of the Guards are about to start for Ireland. These number 800, with few or no Irishmen among them. The fact is that in a struggle with the natives, England could hardly rely on the loyalty of the bulk of the Irish soldiers in her army. It is well known that the Fenians have been tampering with the "rank and file," and in case of revolt there will probably be a good deal of desertion. John Bright and his colleague, Mr. Chamberlain, the radical members of the Cabinet from Birmingham, insist that no coercive measures shall be employed against the malcontents, until the effects of reforms of the present land laws shall have been tested. Many say, however, that even if the extreme demands of the Land League were conceded, the agitation would still continue, as what the malcontents really want is a repeal of the Union with England, and that will never be yielded, inasmuch as it would weaken the Empire.

[Grand Rapids Times.]

A Builder's Testimony.

Chas. S. Strickland, Esq., of 9 Boylston Place, Boston, Mass,, after relating his surprising recovery from rheumatism by St. Jacob's Oil, says: I cannot find words to convey my praise and gratitude to the discoverer of this liniment.

AGRICULTURAL NEWS.

The assessment this season shows 964,695 sheep in Illinois, an increase of 117,595 over last year. This is the largest number in any year since '74..... .....For the year ended June 30, '79, we imported 39,000,000 pounds of wool. In '80 we imported to the same date as much as 128,131,000 pounds, worth $28,700,000. Although the number of sheep in the country is increasing, the amount of our manufactures is increasing much more rapidly..... .....A couple of French military officers are now traveling through the West, having been commissioned by their government to investigate the horse supply of this country, with a view to ascertain whether in case of necessity the growing demand for horses in Europe could be supplied from America..... .Winter rates on storage of grain in Chicago went into effect on November 15. The rates are 1¼ cent per bushel for the first 10 days or part thereof, and one-half cent per bushel for each subsequent 10 days, until four cents per bushel has accumulated, when the grain is carried free until April 15, '81.....The next annual meeting of the Kentucky State Horticultural Society will be held at Bowling Green, on Wednesday, the 12th of January next.

Maine hay is very popular in Boston, her citizens purchasing 1,000 tons of it weekly. Shippers of live stock to Europe prefer it to any other hay. The crop this year is larger and of more than average quality.....Formerly California wheat sold in the English markets at a higher figure than wheat from any other part of America; but now it sells for less than any other American wheat, because the grain is no longer bright and clean owing to slovenly farming—there has been a loss, from this cause only, of 17½ cents per 100 pounds or cental.

In British India the weather has been favorable for the wheat crop, a good yield of which is looked for.....At Cronstadt in the Baltic, 40 steamers were frozen in during the first week in November, and exports of oats and other grain have ceased for the year.....The Indian corn crop along the Danube is reported to be good and England expects considerable shipments in Spring.....Although the wheat crop of Switzerland is reported to be good, prices of wheat there are very high. .....By the the last estimate France will need about 45,000,000 bushels of foreign wheat this year. About half her requirement last year.....During the week ending Oct. 31, the stock of wheat at Odessa and the other Russian Black Sea ports was very small, and the arrivals from the interior trifling and in poor condition. The Taganrog and the other ports in the Sea of Azov report ditto, ditto. Navigation in the latter ports is closed for the season.....The New York canals were closed by ice on the 24th instant. The amount of grain frozen in on the canals and Hudson River is about 1,662,000 bushels Wheat, 4,757,000 bushels Corn, 216,000 bushels Barley, and 16 000 bushels of Peas. There is no present prospect that the canals will be reopened before Spring.....

The visible supply of grain, comprising the stocks in granary at the principal points of accumulation at lake and seaboard ports, and the rail shipments from Western lake and river ports and afloat on New York canals:

	1880. Nov. 20. bush.	1879. Nov. 22. bush.
Wheat	24,190,673	29,772,798
Corn	17,925,815	11,446,692
Oats	4,296,074	3,179,884
Barley	3,621 098	5,085,287
Rye	853,147	1,247,443
Total	50,896,807	50,728,904

A feature of the trade in Cincinnati is canvassed sugar-cured geese. This is a novel article of commerce, but is said to have a considerable sale. Supplies of geese are obtained chiefly from Canada, ...Some great land swindles by Western forgers have just came to light in Cincinnati..... A. J. Tullis, a lawyer, and Jacob Nina, who were indicted by the Grand Jury for forgery were arrested there on Nov. 23, and Cornelius Wegeldrick, an associate, was also arrested next day. The forgeries with which they are charged are of a startling character, involving deeds to large quantities of land owned by the eccentric millionaire, Jeremiah Tullis, who died two years ago. It is said that some ten thousand acres of land near Fort Dodge, in Iowa, have thus been fraudulently conveyed, and innocent parties are now occupying the property. Other lands in Illinois, Missouri and Tennessee have been likewise disposed of. The method was to make a deed from Tullis to McGoldrick, dated a year or two before Tullis's death. Then McGoldrick would deed the land to another of the party, by whom it would be sold to the innocent victim.....Considerable devastation has been wrought, during the last three years, in several agricultural districts of central Germany, by the hamster, or marmot. In the district of Aschersleben, two years ago, nearly 80,000 marmots were caught and killed on the municipal estate alone, comprising some 30,000 morgen of land under cultivation. Last Autumn the trappers succeeded in capturing 83,000 odd, but the nuisance has re-appeared in greater force than ever this Autumn, and it is feared that nothing short of cremation, inflicted upon the surface of the municipal domains, will rid them of the pest.

The newly organized Farmers' Alliance is reported to be spreading pretty rapidly .....The Department of Agriculture's report of the corn, tobacco and potato crop is as follows:—

CORN.—The crop of corn shows no increase over that of last year, but rather a slight decline for the whole country. The Atlantic States all show an increase, particularly the States of New York, New Jersey, Pennsylvania and Virginia. The Gulf States suffered from drought in the Spring and too much rain during the Summer, except the State of Texas, which almost doubles her product. In the States north of the Ohio River, Ohio and Michigan increased their yield, while Indiana and Illinois decreased. West of the Mississippi River Iowa alone increased her yield. On the Pacific slope California shows an increase.

TOBACCO.—There was less land planted in tobacco this year than last. The decrease was principally in the States of Maryland and Virginia. In Ohio, Pennsylvania and Wisconsin there was a decided increase. Early in the season the weather was not propitious, but in August and September it was very favorable. The average yield per acre, as reported Nov. 1, is 740 pounds, against 795 last year.

POTATOES.—The area planted in potatoes was this year about equal to that planted in 1879, but in the total crop there is quite a decline. The yield per acre is reported this year at an average of 91 bushels, against 98 in 1879 and 99 in 1878. Only three States—Texas, Arkansas and California—report an increase in the yield. All others report a decline more or less. Insect injuries are not of general complaint, but drought is almost universally mentioned.

While there was a falling-off in the value of the breadstuffs exported from this country during the month of October of this year as compared with the corresponding month of last year,—being only $25,711,468 in the former month, as against $33,048,607 for the latter month,—the value of the exports for the ten months ending October 30, 1880, exceed the value of the exports for the corresponding period of the previous year by $23,332,686.....Pleuro-pneumonia has again broken out among the cattle in Virginia, immediately across the Potomac, from Washington. Members of the National Grange in session at the latter place said that, from the investigations they had made, they were confident that if the disease ever crossed the Allegheny Mountains it would result in the loss of millions of dollars' worth of property. The danger was just as imminent at the beginning of this Congress, when pleuro-pneumonia appeared near Alexandria. But Congress only referred the subject to the Committee on Agriculture. That Committeee is organized in the strictest State rights' interest, and has de-

clined to do anything except to make a report so impracticable that it was referred back to the Committee, where it has been suffered to die....

Dr. Pierce's Extract of Smart-Weed is a compound fluid extract of smart-weed, or water-pepper, Jamaica ginger and other ingredients known to be efficacious in curing colic, diarrhœa, dysentery, blood-flux, and kindred affections. It also breaks up colds, fevers and inflammatory attacks. Sold by druggists.

Tropic Fruit Laxative, an agreeable substitute for pills and nauseous purgatives. One lozenge is the dose. Physicians prescribe it. Sold by druggists.

The ladies who some time since were unable to go out, having taken LYDIA E. PINKAM'S VEGETABLE COMPOUND, are quite recovered, and have gone on their way rejoicing.

Kidney and urinary trouble is universal, and the only safe and sure cure is Hop Bitters—rely on it.

Burnett's Flavoring Extracts.—*The superiority of these extracts consists in their perfect purity and great strength.* They are warranted free from the poisonous oils and acids which enter into the composition of many of the factitious fruit flavors now in the market.

The Markets.

SPECIALS FROM THE CHIEF CENTERS.

Until Saturday, Nov. 27.

Boston.—WOOL.—Our sales show a total of nearly two and a quarter million pounds of domestic, and over three hundred thousand pounds of foreign—a very good week's work. The principle operations continue to be centered in domestic wools, and the largest movements are in washed fleeces, California and pulled. Fleeces are fully as strong as ever, owing to the unabated views of holders in the country; and the sales are in moderate sized lots and show a wide distribution. Pulled wools in our market are selling remarkably well. Fine combing is also in good request. Ohio and Pa., XXX, 50@52, No. 1, 49@50, XX and above 48@50, X 47@48, Michigan X and above 44@46, Wisconsin X and above 45@45, New York, 40@43, Vt, N. H., and Maine 40@43, Georgia, 37@40; Combing washed 49@55. Unwashed 35@40, Delaine, washed 48@55, Unwashed 36@40, Texas, eastern 27@30, Oregon, valley 38@40, Eastern 32@35, Nevada, 22@28, Kentucky, unwashed 35@40, Unmerchantable, 33@38, California, Spring, 38@40, Fall, 20@32, Pulled 33@50, Secured 45@95, Tub washed 45@52, Scoured, fleece 60@95, Pulled, Super western 35@38, eastern 45@50, New York 40@45, Extras 40@45, Combing 38@45, Foreign—Canada combing 45@48, do Pulled 37@45, Australian 43@48, Cape Good Hope 29@32, Carpet washed 30@32, do unwashed 18@20, Montevideo 35@40.

Chicago—All kinds of grain active; No. 2 Red Winter, $1.09; No. 2 Chicago Spring, $1.09¼ cash; $1.09¼, December; $1.10¼, January; $1.11¼, February; No. 3 Chicago Spring, 93c@96½c; Rejected, 74c@79½c. CORN, 42c, cash and December; 42½@42⅝c, January; 47⅝c@47¾c, May. OATS, 32¼@32⅜c, cash or December; 32¼c, January; 37c, May. RYE, 91c. BARLEY exceptionally firmer at $1.05. PORK dull and lower at $13@$13 75, cash; $12.20 bid. November and December; $13.70, January. LARD dull and weak at $8 52½@$8.55, cash; $8 55, December; $8.60, January. Bulk-meats dull; Shoulders, $4.05; Short Rib, $7.10. BUTTER—Prices were without marked change. They were firm, especially for good to choice grades, such being in light supply and in fairly active demand. Low and medium grades remain under neglect. Creamery, 30@33; Dairy, choice, 25@27; Dairy, fair to good, 22@24; Ladle-packed, 17@20; Packing stock, 12@15; Grease, 8@10. CHEESE—But slight change was apparent in this market. There was a light demand, a full supply, and a rather easy set of prices. Full cream, September and October, 12½@12¾; Full cream, 11@11½; Part skim, 9@10; Full skim, 5@6; Low grades, 4@5. HAY—Was in fair request and steady. The offerings were only fair, and shippers and local dealers were taking the car lots. No. 1 timothy ₩ ton, $15@15.50; No. 2 timothy, ₩ ton, $13.50@14.25; Mixed, $12@13; Upland prairie, $13@14; No. 1 prairie, $12@12.50. HOGS—Market opened weaker than on Friday; a large number still on hand of a common kind; mixed packing, $4.40@4 65; light, $4 50@4.65; choice heavy, $4.85@5.05. CATTLE—Best firm; others lower; cars very scarce; exports, $5.50@6.25; some fine Missouri in market; good to choice shipping, $4 80@5 20; common fair, $3.80@$4 50; butchers' weak at $2.20@2.90; stockers steady and active at $2 40@3.20; feeders, $3 20@3.40; long-horns and half-breeds, $3.60@3.90; Texans, $2.85@3.15. SHEEP—Market quiet; common to medium, $3 20@3 60; good, $3.90@4.15.

St. Louis.—WHEAT unsettled, No. 2 Red Fall $1.05⅝@1.07¼, cash; $1.07½@1 08 December, $1.09⅞@1.11, January, $1.13@1.14 February, $1.15⅝@1.16⅝ March, No. 3 do. $1 05¼, No. 4 do. 98¾. CORN 43 cash and November, 43¼@43½ December, 43¼ January, 43¾ February, 44¾ March, 46¾@46⅝ May. OATS 34 cash, 33¾@34 December, 35¼@35½ January. RYE easy at 89. PORK dull at $13.90 asked, cash; $13.16¼ January. LARD lower at nominally 8¾, bulk-meats lower; shoulders $4.45@4.50, clear rib $6.90@6.95, clear sides $7.10@7.15. BACON dull, shoulders 6½, clear rib 7⅞, clear sides 8¼. HOGS quiet, Yorkers and Baltimores $4 10@4.20. mixed packing $4.40@4.60, butchers' to fancy $4.60@4.80. CATTLE in good demand, only small local trade, extra heavy fat steers would bring $6. SHEEP in good demand, small supply.

Cincinnati.—WHEAT unsettled, No. 3 Amber, $1.07, No. 2 Red Winter, $1.08, CORN easy; No. 2 Mixed, 50, new, shelled 47. OATS, firm, No. 2 Mixed, 37. RYE active and firm, No. 2 $1. BARLEY active and firm, No. 2 Fall, 97@$1.PORK quiet at $13. LARD dull and drooping at $8.55. Bulkmeats quiet, Shoulders, 4 5-8, Clear Rib, 7¼. Bacon quiet, but steady, Clear Rib, $7.80, Clear Sides, $8.20. BUTTER strong and higher, choice Western Reserve, 24@25, choice Central Ohio, 20@23. HOGS dull, common, $3.90@$4.20, light, $4.25@$4 45, packing, $4 40@$4.00, butchers', $4.65@$4 70 MILL FEED—The demand is more active, especially for Middlings, and prices are higher. Bran sells at $13.00, Shipstuffs at $13.50@$14.00, and Middlings at $16@20 ₩ ton in bulk and 50c more in sacks on track. HAY—There is a more active local and shipping demand and the market is stronger. Common selling at $12@$14, prime do. at $15.50@$16 ₩ ton, and Prairie hay at $11.50 per ton, in bales on arrival. Wheat and Rye straw are dull at $7@$8, and Oat straw firm at $9@10. SORGHUM—Is firmer under moderate receipts and a good demand; good to choice sells at 32@35 per gallon in lots. Sales are made at 1@2c more by the single barrel. CHEESE—There has been a quiet but steady market all the week for prime to choice factory at 12@12½ ₩ lb. EGGS—Under light receipts the market has ruled strong and prices have advanced to 27@28 per dozen for fresh. Fruit house stock sells at 23@25.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Nov. 27, 1880.

BEANS AND PEAS.—Supplies of beans are not oppressive and as a rule all grades are firm, but must be choice to realize extremes. Green peas have declined Wis. $1.70@1.75 prime, So. B. E. peas saleable at $1.80@1.85 per 2 bu. bag.

Marrow beans prime $1.85@1.87½, fair to good $1.70@1 80, medium, prime $1.57½@1.60, fair to good $1.45@1.52½. pea, $1.55@1.80, white kidney, $1.80@1.95, red do. prime $1.85@1.90, fair to good $1.65@1.75 black, or turtle soup, $1.60@1.75, lima, $4.50@5.

BEESWAX—Small sales are noted at 22@24 for Western and Southern.

BUTTER—Anything that points to or tends to diminish supplies strengthens the New York markets, and the favorable turn which butter took last week by the pull of the holiday, is further secured by a recent snow storm. Fancy creamery is decidedly stiff, supplies being restricted to Western, in fact some brands are not offering at the quoted extreme. Selections of other styles are visibly helped with the advancing tone, and besides there is so much stock that obtains in merit by showing better on the tryer in cold weather, that the market may be reported better in some way for all useful goods. State dairies have a good call when they have good long fall tops. Western dairy and factory sell out clean when fresh; all early marks of western are quiet. Roll butter not plenty; only rosy, cloth-wrapped half barrels bring the extreme.

Creamery, finest, 31@33c.; good to prime, 32@33c.; fair to good, 28@31c.; poor to fair, 25@28c.; sweet cream, 28@32c.; State entire dairies, choice, 27@28c.; good to prime, 25@26c.; fair to good, 23@25c.; firkins, in dairies 24@27, pails and half tubs, fresh, 30@31c, good to prime, 28@29c.; fair to good, 25@28c.; poor, 20@23c.; Welsh tubs, tall prime, 29@30c; good to prime, 25@28c.; fair to good, 22@24c.; Western imitation creamery, 22@28c.; dairy, fresh, 25@26c.; good to prime, 22@24c.; fair to good, 20@22c.; factory, late made 20@21c.; other, 15@18c.; rolls, 18@21c.; poor western 13@15c.

Receipts for the week, 26,440 pkgs. Exports for the week, 3,677 pkgs.

CHEESE.—Trade has dragged this week, exporters being very indifferent, and taking only 22,000 boxes. When strictly fancy September was needed 13¼ was met, but other fancy lots have been freely offered at 13, and have been hard to sell, and stocks have been steadily accumulating. Quotations are for

State factory, fancy, at 13@13¼c.; do. good and prime, 12¾@12¾c.; do. fair to good, at 11@12c.; do. half skimmed, 8½@10c.; Wisconsin factory, fine, 12¾@12¾c.; do. good to prime, 12@12½c.; do. fair to good, 10½@12c.; Ohio factory, fine, 12¼@12¾c.; do. good to prime, 11¾@12c.; do. flat, fair to good, 10@11¼c.; do. poor to fair 7@10c.

Receipts for week, 64,097 boxes.
Exports for the week, 23,000 boxes.
Liverpool cab's price, 67s.@66. 7d.
Steam to Gt. Britain, 50s.

COTTON.—Never before in the history of this trade has the market shown the excitement noted the past week. Sales of the options made in one day reached 400,000 bales, an unprecedented total, and once or twice have been above 300,000 bales. Prices have shown an unusually rapid advance, leaving off, however, with some reaction from the best figures. The activity was started by the reports of cold weather South, and possible injury to the crop, and with this Speculators went to work with a will, and as the market went steadily upward a large number of outside orders came in, which with an increased desire to invest by parties in the South, served to increase the confidence. The exporters, and to some extent the spinners, have been kept out by the feverish course of the market, and it is not likely that these branches of the trade will start up until a more settled feeling prevails. The closing prices are for

November at 11 98@12c.; December at 12c.; Jan. at 12.20@12.21c.; February at 12.36@12.36c.; March at 12.53c.; April at 12.64@12.66c.; May at 12.77@12.79c.; June at 12.85@12.87c.; July at 12.92@12.94c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

Receipts for week, 41,470 bales. Exports do., 10,802 bales.

Receipts since Jan 1st, 937,450 bales do in '79, 828,900 do. Exports for corresponding period in '80, 595,867 bales; do. '79, 403,462 do.

DRIED FRUITS.—All articles have moved out well. An increased demand noted for apples especially evaporated lots and low grades of Western, the latter wanted for export, and for evaporated peaches with small fruits having a fair sale. Prices are generally strong. Quotations are for

Evaporated apples at 7¾@8¾c. for better qualities sliced apples at 5@6¼c. for good to choice North Carolina 3½@4¼c. for Va. apples, 5¾@4c. for Tenn. do; 4¼@5¾c for State do; 8¼@5c. for western Ohio and Mich. Peaches at 2?@3c. for evaporated peeled; 14¾@14¾c. for unpeeled do.; N. C. peeled at 18@20¾c. for the better qualities, and 12@13c. for fair to good lots of peeled peaches; unpeeled peaches at 6¾@7¾c. for halves and 6¾@7c. for quarters. Plums at 5c. Blackberries at 6c. Cherries at 18c. Raspberries at 24½@25c. Whortleberries at 12@13½c.

Receipts for week, all kinds, 5,612 pkgs.
Exports for week, 6,741 bbls. of dried apples.

EGGS.—Receipts for the week, 8,342 bbls.; do last week 11,54 . Market firm and higher after an active demand for Thanksgiving, and the possible restrictions of supplies in advent to cold weather,

Near points 33, State and Pa. 30, Western choice, 29@30, seconds, 25@26, Canadian, 27@28, Southern, 28@30, the lower for Tenn, limed State 19@20c., do. Western 18@19.

FLOUR—Has sympathized with wheat in showing marked activity on export and home trade account, and prices higher.

Latest prices are: $3.75@4.50 for very inferior to fancy superfine State and Western; $4.20@5.25 for poor to choice extra State and Western, odd lots and lines; $5.25@5 40 for choice to fancy do.; inferior to good white wheat, trade and family extras, $5.35@6.25; good to choice do. at $6.35@6.85; (very fancy do. up to $7.25, an extreme;) red and amber winter wheat inferior to choice trade and family at $5.25@6.05; round hoop Ohio, $5.20@5 35; and trade and family brands of do. at $5.75@7.00, the latter for strictly fancy; St. Louis at $5.35@6,25 for inferior to good extra; $6.25@6.85 for good to choice and $7.00@7.25 for choice to very fancy brands; Minnesota clear, inferior to fancy at $5 00@6.50; Minnesota "straight," poor to fancy, at $6 15@7.35, and patent inferior to fancy at $6.00@8.50; unsound stock at from $3.20@5.75; city mill extra at $5.15@6.35 for fair to very choice for the West Indies; do. for England, $4.90@5.25 for poor to choice spring wheat, and $5.35@6.00 for winter wheat product; do. trade and family extras, $5.25@7.35; do. for South America, $6.25@6.65, the latter for fancy; No. 2 at $3.70@4.25 for inferior to fancy.

Receipts for week, flour, bbls. 146,500; corn meal, do. 5,658; wheat, bush. 1,645,400; corn, do. 889,300; oats do. 245,300; rye, do. 31,740; malt, do. 88,046; barley, do. 422,550; beans, do., 5,704; rice, pkgs. 1,950.

Exports for week, flour, bbls. 66 134; corn meal, do. 3 576; wheat, bush 734,800; corn, do. 808,890; oats, do. 3,500; peas, do. 5,726; beans, pkgs. 454; rice, do. 1,189.

FURS AND SKINS—There will be no settled prices until later on in December.

FRESH FRUITS.—Exports of apples since Jan. 1st 455 700 bbls; same time last year 210,600 do. The demand is very slack for apples owing to the damage and suspected damage by the late frost. Lots in perfect condition are firm and higher, though only in a small way for trade use; shippers decline to risk exportation.

Baldwins in bbls. $1.50@1.75; Greenings, $1.25@150; Spitzenbergs, $1.50@1.75; Pound Sweet, $1.75@2. Lady apples, $3@7; common to good fancy, $8@10; Liverpool market overstocked with apples, but it is thought a good outlet will arise for points near that city and make room for future business here. Cranberries active and firm; one dealer reports a sale of over 1,000 bbls. during past 10 days, some going to Europe. Cape Cod fancy, $6.75; other $4@6.25; for boxes, $3@2.25; N. J., do. $1.37@1 87. Florida oranges do not turn out very attractively yet; prices good for the style of fruit arriving; choice half bbl. case $3.50@4; fair to good, $3@3 50; one-third bbls $2@2.50. Burton box pears range $3@6. Calif rnia fruits unchanged. Catawba grapes rate 5@7c. in bulk or cases. Isabellas 3@4c. Peanuts firmer with improved sales; Va. hand-picked 6¾c; other grades 3½@4c; shelled 4@5c. Chestnuts ₩ bush of 60 ℔s $3@3.25. Hickorynuts ₩ bush. of 50 ℔s $1.50@1.75, which is easier. Butternuts, western, 60@75c. Black walnuts 50c. Pecans 9½@9¾c.; yield of latter large this season. The readiest market is entertained for this valuable Texan product.

GRAIN.—The market has shown much excitement the past week for all articles. The sudden cold snap, and the detention on the canals in consequence of several millions bushels of grain has been the lever to hoist prices to a comparatively extreme basis. Speculative operations have been unusually extensive, but the exporters have been more or less hindered by the radical changes. Towards the close there has been some reaction. Latest prices are for wheat as follows:

No. 1 white at $1.22@1.24, do. November at $1.22@1.23¾ do December at $1.22½@1.24¾, do. Jan. at $1.24¾@1.26¾, No. 2 white at $1.21@1.21¾, ungraded white at $1.17@1.24¾, mixed Winter at $1 21½, No. 1 red at $1.31, No. 2 red at $1.24¾@1.27¾, do. November at $1.24¾@1.27, do. December at $1.24¾@1.27¾, do. January option at $1.27¾@1.29¾, do. February at $1.29@1.31¾, No. 3 red in lots at $1.21½, ungraded red at $1.17@1.31, New York No 2 Spring at $1.20, ungraded Spring at $1.15. Rye at $1.01@1.07. Barley at $1 for No. 2 two-rowed state. Corn at for New York No. 2 61¼@61¾c., do November at 61¼@61¾c, do. December at 61¾@61¾, do. January at 62¼@62¾, ungraded mixed Western at 58@61¾, No. 3 at 58@58½, No. 2 white at 61½. New York yellow 61¾@63¾, New York steamer mixed at 58@59, new mixed at 61½, yellow southern at 62¾, white southern at 61@63½. Oats at for No 1 white 49, New York No. 2 white at 46¼@47, No. 3 white at 44¾@44¾, New York No. 1 at 45@45½, New York No. 2 at 44¾@45½, do. November at 44¾, do. December at 45, do. January at 46¼@46½, No. 3 at 43¾@44 ungraded white Western at 45@52¾, ungraded mixed Western 43@45, white State at 51. No. 2 Chicago quoted at 45 bid.

HAY AND STRAW.—Receipts continue moderate, demand active and prices strong. Quotations are for

Shipping hay at $1.05; medium to prime do., $1.20@$1.40; salt hay at 70c.; clover do. at 95@1.05. Straw at $1.10@1 15 for long rye; 80@85c. for short rye; and 70@80c. for oat.

Exports for week, 690 bales.

Since June 1st the export demand has nearly doubled.

HOPS.—Shippers are steady buyers, but brewers are doing little, and with some increase in the receipts the feeling is less firm. Quotations are for

	Cents per ℔.

Pacific coast, new	23	@25

Receipts for week, 5,086 bales. Exports for week, 3,440 bales.

OIL CAKE.—Western is quoted at $30,50@31 ₩ ton.

POULTRY AND GAME.—The Thanksgiving supply was heavy and as prices were low enough to allow large local loading up the market at the moment is weak and easy, especially for turkeys. There was a better mixed demand than has been noticed on former similar seasons. A good many parcels of long transportation are frosted and sales are thereby hurt. Heavy arrivals expected.

Turkeys, N. J. 13c.; State and Western, choice, 11@11½c.; fair to good, ¾@10 c. Phila., dry-picked, 12@14c. Chickens, d o., 12@13c.; Bucks Co. 11@12c.; N. J. 10@11c.; State scalded, 9@10c.; Western, 9@10c.; poor, 7@8c. Fowls, Phila., dry-picked, 10@11c.; N. J., 10@11c.; scalded, 10c.; State do., 8@9c.; Western, do., 8@9 c.; poor to fair, 7@8c. Ducks, Phila, d.-p. 11@13c.; State scalded, 11@12c.; Western mixed, 10@11c.; poor 8@9c. Geese, choice fat 10@11c.; other, including State and Maryland, 8@9. Squabs, white, $2.00; do. dark, $1.25.

Live fowls and chickens hardly pay for the sending.

Roosters 3@4¼. Fowls and chickens 6@7¼. Turkeys 7@9. Ducks prime to ₩ pair, other 40@60. Geese extra 82, prime $1.75, common to good $1.00@1.25.

Sales of game were very liberal for the festival table and the market is now under a full with easier prices, quail showing the most decline. Venison has a better movement.

Wild ducks, Havre de Grace and Western canvas back per pair $1.75@2; red heads, 75c@$1; mallard 55@60c.; teal, 35@50c. the latter for blue-winged; common 25@35c. Quail, prime, $1.25@1.37 ₩ doz.; other, $1.00; partridge, 60c@$1.12, the latter for State. Grouse, prime, $1@1.12; drawn, 62@80c.; Woodcock, ₩ pair 65@75c.; Rabbits, 25@35c.; Hares, 35@40c.; Venison, best saddle, 15@16c.; poor to fair, 13@14c. Whole deer, 10@12c. Bear, 20c. Wild turkeys, 18c.

PROVISIONS.—Hog products have sympathized with the speculative excitement in breadstuffs and show a sharp advance.

Mess pork quoted at $14.50@15 for spot lots. Bacon at 7.80@7 87½c for long clear, 8¼ for short clear. Beef hams at $18. Beef—Extra India mess quoted at $18@20 for city; $9.50 for extra mess, and $8 50 for plain mess; $11@12 for packet, and $13@13.25 for family mess. Lard, Western steam at $8.15 for spot lots and November 9.12½ for December, 9.15 for January and 9.22½ for February. Stearine at 9 9-16@9¾. Tallow at6¼ for prime.

Receipts for week, beef, bbls. and tcs.: 1,200; pork, 3,575 bbls; cut meats, 32,502 pkgs.; lard, 16,225 pkgs.

Exports for week, beef, bbls. and tcs. 1,800; pork, 4,027 bbls.; cutmeats, 8,760,488 lbs.; lard, 5,553,017 lbs.

SEED.—Clover has more demand and is quoted at 8½@9c. Timothy is quoted at $2.75@2.85.

TOBACCO.—The market has not varied from last week's prices being held steady and demand good.

VEGETABLES.—Exports of potatoes for week, 5,304 bbls.; since Jan 1 '80 195,541 do; do. '79 177,900 do The market is quiet; many lots have been caught in the sudden frost and buyers are suspicious in such an event. Guaranteed lots firm. Eastern stock is not turning out as good as for last season. Onions are scarce and firm. Cauliflower giving out. Celery has a large sale this season and though crop is large prices are very firm for choice. Cabbages higher and tending upwards.

Potatoes, E. Rose Eastern $1.68@1.87; State, $1 62@1.75; do. in bulk $1 37@1.50; Burbank and prolific $1.37@1.62; snowflake $1.50@1 75; peerless $1@1.25 outside rates double heads; sweet choice $2 50@; other, $1.25@1.50. Turnips; w. ₩ bbl., 50@62c.; Russia, 50@75c.; beets, 75@87, cabbage, flat Dutch, ₩ 100, $3@$1.50; red, 5@7; Squash, Hubbard, ₩ bbl., 75c.@$1; marrow, 40@50; onions, white, $5@5.50 yellow, $3.25@3.50, red, $3.25; Chester, $3.25; carrots, $1@1.25; pumpkins, ₩100, $4@8; cauliflower, ₩ bbl. $3@$4.50; celery, per dozen, $1@1.50.

WOOL.—The course of the market is still to favor holders on a very good demand from manufacturers and reserved offerings.

X and above Ohio fleece held at 48@49, XXX Ohio at 50, other Western fleeces 43½@46, scoured California at 77@80, scoured Texas and Cape at 75@90, fall Texas at 21@28, choice fall Texas at 30@34, spring Texas at 18@32.

LIVE STOCK MARKETS.

NEW YORK, Saturday, Nov. 27, 1880.

BEEVES.—Receipts for the week 12,298 head; do. last week, 12,964 do. The beef market loses a couple of days when poultry week is here. The supply is not as large as it looks as a large export took place this week; yesterday more than one-half of the offering went to exporters. Good cattle for butcher's use were consequently firm at full former figures. Medium qualities are off about ¼c from Wednesday's rates. Poor Colorados did not meet a buyer; common dry cows and heifers sold at $10@12.50 per head and 2½@3¼ ₩ ℔ live weight; poor to fair native steers 7@9¾, to dress 54@56 ℔; good to choice 9¾@11, to dress 56@57℔.

SHEEP AND LAMBS.—Receipts for week, 22,471 head; do. last week, 40,869 do. The demand is moderate but with small receipts sellers did not press stock for sale. Market closes 3¼@5¾ sheep; 5¾5¾ lambs; choice latter a shade higher.

HOGS.—Receipts for the week, 43,765 head; do. last week, 16,015 do. Market weak for live.

Live quoted 4¾c; some prime quality Ohio held for 5c; New Jersey dressed pork, light 7½@8c.; medium 6¾@7c.; heavy, 5¾@6c; city dressed State light 7¾@7¾c, medium 6¾@6¾, heavy 5¾@6, city dressed Western 6@6¾ roasting pigs 10@12 dressed; pork tenderloins in cases 9@10.

COWS AND CALVES.—Receipts have run light and not of fine quality. There have been sales at $30@45. A good grade of animals would sell in car-load lots at $45@50; higher priced cows would be subject to special order.

VEAL CALVES—Poultry week has slackened the demand for live or dressed calves; prices only steady.

Live N. J., prime to choice 7¾@8c., State, 7¾@7½c.; fair to good 6½@7¼c.; poor 5@6c.; Mt. Holly, medium to light 6@7¼c.; heavy, 4@5¾c.; buttermilk, 2½@3½c.; grassers, 2@2½c.; hog dressed calves, prime 10@10½c; fair to good, 8@9½c.; very poor, 3½@5½c.

SPELLING IN THE NURSERY.

"G-u-n," said Grace to Willie;
"What does that spell?" "I don't know,"
He is three and she is seven.
"G-u-n! Goose?" "Oh, dear, no!"
"Rooster? Boy? Stick?" Each time
Gracie shook her curly head,
"'Tain't conundrums I am giving
But a lesson-word instead.

"When a little boy shoots
At a rabbit, what goes off?"
Gracie said, her face in a study,
As she quelled a little cough,
Thinking he would surely guess it,
"You're so stupid! I'm quite hoarse
Talking to you." "What goes off?
Why, the rabbit does, of course."

FARMING FOR BOYS AND GIRLS.—NO. 5.

HENRY STEWART.

The Sun's Light and Heat and Their Effects.

It is very easy to ask what may seem a simple question and yet the wisest man may not be able to answer it. For instance, if we ask what is light, no positive reply could be made. We are about as much in the dark too in regard to the nature of heat. The most we know about these two important questions is that light is supposed to be the result of the passage of very rapid undulations or waves which proceed from any luminous body, and that heat is the result of some particular motion of the particles of any body. When any substance is in a condition to cause these waves to proceed from it it is called luminous or light giving, and when the particles of a substance are forcibly pressed together, as in a piece of iron beaten rapidly with a hammer, the substance gives out heat. If what we think of light and heat is true, they are simply forces or motion, and not matter, and we know more of the effects and properties of these forces than we know of their nature. So far as light and heat are of service in the growth of plants, a knowledge of their properties is sufficient to enable us to learn how useful they are in enabling seeds to germinate; leaves to digest plant food; the plant to turn its liquid food into solid substance; flowers to charm us by their colors and fragrance, and fruits to delight us by their exquisite tints as well as their delicious and varied flavors. Seeds may sprout in ice, but ice is not absolute cold and possesses some degree of heat; but this is exceptional, for the ordinary seeds that are sown in gardens and fields require a considerable amount of heat to grow, and some will fail to grow without a high degree of heat. Seeds sprout better in the dark than in light, but as soon as leaves begin to form light is needed to give them color and vigor. Thus in practice it is proper to cover the seeds with a sufficient depth of soil, and not, as some farmers do who are not well informed on this point, leave a large portion of it on the surface of the ground in the belief that it will grow. Much loss occurs from this mistake and bad practice. As soon as the leaves are formed they begin to give off oxygen gas and take in carbonic acid gas; in the dark the reverse takes place. The former process is necessary to the formation of wood or solid vegetable substance, so that without light a tree or plant could not be produced. The action of the sun's light upon leaves converts the sugar of the sap into wood fiber, the sugar being first produced from starch and the starch being produced from carbon and water. For it may be said that starch consists of 12 parts of carbon and 10 of water; vegetable mucilage and wood fiber consist of the same, and sugar has one part more of water, so that the carbonic acid taken into the plant in the night is changed during the day into vegetable substance by a series of operations that are very interesting to one who studies chemistry to a very moderate extent only. The wonders of plant growth and life are so simple and yet so strange, when understood, as to make the study very attractive even to young persons, while they are necessary to the success of older persons who live upon farms.

One of the effects of light is to produce wholesome plants. Some plants become noxious when grown in a weak condition in a poor light, as, for instance, potatoes that sprout in a cellar are poisonous in some cases. There are plants that are sour in the morning, tasteless at noon and bitter at night. This is explained by the fact that if carbonic acid loses one-fourth of its oxygen it may be changed into oxalic acid which is a deadly poison and very sour; or on the other hand an excess of carbon in a corresponding degree would have the same effect; and this effect may be produced by the want of sufficient light. Lastly: the coloring of fruits and flowers is due to the action of light. Without light, if flowers could grow, they would have neither color nor scent; and fruits would be tasteless and colorless. For if a part of the surface of an apple or peach before it is ripe, be covered with slips of paper, the color will not appear there. In this way some persons have caused names and designs to be marked on fruits by pasting paper cut to the form desired upon the surface while the fruit is ripening. As has been already stated, starch is changed to sugar by the action of light, and heat has the same effect; so these blessed influences of the sun are the true life givers, for without them, no plant could grow; no fruit could ripen; and without vegetable life no animal could exist and the beautiful earth would be cold, dark and utterly devoid of any life whatever.

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK:—I am almost afraid to come in with my report so late. I received the seeds from your Spring distribution but got no cox-comb seed as mentioned in the RURAL. The double China Pink I planted in box and in four days I had about 30 plants up. Some were pink, others white, and as double as could be. I have saved some seed from them. Phlox, mignonette and portulaca done wonders; they were much admired for their beauty and fragrance, and much more for being presents from the RURAL. Okra came up and bloomed; the pods grew about half an inch long and then died. I think we are too far north to grow Okra. The Surprise Muskmelon did well. I have had two vines with five melons on them. I was very proud of them, but an Indian thief stole them all on the night of Aug. 19th. I was very much disappointed. I have sold potatoes and onions and got $6.75. I think I did pretty well for the first time I ever made a garden. I will not invite you, Uncle, to call on us, for I don't suppose you will ever come near here, but if ever you do you will be a welcome guest. I hope some day to meet some of my American cousins. Accept the best wishes of your affectionate niece,

Temiskuemangue, Canada. LIZZIE F.

DEAR UNCLE MARK:—The past season has been very dry, the dryest for twelve years, for this reason my garden was not very good. The grapes were an entire failure, I had one plant growing nicely, but it died some time in July. My Okras were very dwarf growing only nine inches high, the first flower was but half an inch from the ground. Of the Surprise Melons I raised eight large ones of very good flavor, I have raised a large lot of seed for next year. The flowers did the best of all as I had them close to the well and could water them frequently. The pinks were the handsomest, such a variety of shades and color and very double; the phloxes were beautiful, but I neglected pinching them back and they grew too spindling. I raised but one plant of portulaca, and that was white, it grew to be very large and had a great many flowers. I have been studying botany this Summer with Gray's "Manual," and "Field and School Book of Botany," but think they are not suited to this Western country. Can you recommend a botany of the Western States?

Yours Truly, WILLIAM I. MASON.

Dodge Co., Neb.

[There is no better book than Gray's.—U. M.]

DEAR UNCLE MARK:—I have been thinking for a long time I would write to you, and see if you would let me join the Horticultural Club. I live on a farm among the hills of Westchester County, on a farm of a hundred and forty-six acres—and the name of it is Lake-side View. Our farm runs by the Croton Lake that supplies New York city with water. In the Winter we get our ice to fill the ice-house, but last winter it did not freeze hard enough to cut. We have a team of horses and a yoke of oxen, and twenty cows and about fifty chickens. I have only one pet and that is a canary bird and his name is Charley. I have an organ and can play on it. It is a very pretty one. We have taken the RURAL for eight years, and like it very much. My father goes to New York every week to his business, and is not home only from Saturday night till Monday morning, and I drive to the train to meet him and take him home; we live two miles from the depot and 38 miles from New York City. Yours truly, BELL.

DEAR UNCLE MARK AND COUSINS.—I will tell you about the seeds you sent us last Spring. The beets you sent us came up and one of them weighed 17½ pounds. The oats and cow-peas came up, but the hens also scratched them up. And a few of the flower seeds came up, but the weather was so hot it destroyed them. The Beauty of Hebron potatoes came up. There were three sent us year before last, and last year we raised a pan full, and this year we raised a barrel full. If any of the cousins have any coxcomb seed I would be glad to exchange some of my seeds for them, and, Uncle Mark, please remember me in the free seed distribution this year, and I will try and do better with them than I did last Spring. I have a pair of bantams. I think if I had taken them to the fair I would have got the premium. I did not see any there as nice as mine.

Your loving niece. ELLA PATRICK.

Dexter, N. Y.

UNCLE MARK AND RURAL COUSINS:—Not seeing any letters from this part of the country, I will ask to be admitted to your interesting club. I am not a grandmother, though the gray hairs are gathering on my head, yet I love to hear from the children, and not one of their letters escapes being read. I think it a grand idea for them to learn to write letters. We live in the Timber; a steam saw-mill stands about 100 yards from our house, and I cook for from eight to twelve hungry men every day. I am a great lover of flowers and have a large window full of house plants. There are a great many beautiful wild flowers here in the Spring, some of the prettiest blue flowers I ever saw. With good wishes for the RURAL and all of its band, I say good-bye. WANDERER.

Medical Lake, Wash. Ter.

DEAR UNCLE MARK:—My sister Birdie has been writing to you, and I would like to introduce myself to the Cousins of the RURAL. I am a little boy eight years old. I go to school and read in the second reader. We live in the county of Oxford, which is called by many the garden of Canada. My pa gives me a piece of ground to plant for myself, and I hope you will send me seeds for it. Your nephew, LINDLEY MCDONALD.

Oxford Co., Canada.

DEAR UNCLE MARK: I like to read the letters of the cousins. I am a little boy 11 years old. I go to school and learn grammar, geography and arithmetic and read in the Fourth Reader. The school is one mile and a half from where I live. Please send me some seeds. I had no garden this year, but intend to have one next year.

Your nephew,

Milwaukee County, Wis. J. J. SHUMMOCK.

Hop Bitters does not exhaust and destroy, but restores, cures, and makes new.

Sabbath Reading.

PEACE.

THERE is such a thing as "peace subsisting at the heart of endless agitation." You may remember the attempt that was made a year or two ago to build a steamer in which the central saloon was to hang perfectly still while the outer hull of the ship pitched and rolled with the moving sea. It was a failure, but the theory was sound and looked practicable. At any rate, it is a parable of what may be in our lives. If I might venture, without seeming irreverence, to modernize and so to illustrate this command of our Lord's, I would say, that He here bids us do for our life's voyage across a stormy sea, exactly what the "Bessemer" ship was an attempt to do in its region—so to poise and control the oscillations of the central soul that however the outward life may be buffeted about, there may be moveless rest within. He knows full well that we must have rough weather, but He would have us counteract the motion of the sea, and keep our hearts in stillness. "In the world ye shall have tribulation," but in Him ye may have peace.

He does not wish us to be blind to the facts of life, but to take all the facts into our vision. A partial view of the so-called facts certainly will lead to tumultuous alternations of hope and fear, of joy and sorrow. But if you will take them all into account, you can be quiet and at rest. For here is a fact as real as the troubles and changes of life: "Your Father knoweth that ye have need of these things." Ah! the recognition of that will keep our inmost hearts full of sweet peace, whatever may befall the outward life. Only take all the facts of your condition, and accept Christ's word for that greatest and surest of all—the loving Father's knowledge of your needs, and it will not be hard to obey Christ's command, and keep yourself still, because fixed on Him.

But now consider the teachings here as to the true source of the agitation which our Lord forbids. The precept itself affords no light on that subject, but the context shows us the true origin of the evil.

The first point to observe is how remarkably our Lord identifies this anxiety and restlessness which He forbids with what at first sight seems its exact opposite, namely a calmness and peace which He also condemns as wholly bad. The whole series of warnings begin with the story of the rich man whose ground brought forth plentifully. His fault was not that he was tossed about with care and a doubtful mind, but the very opposite. His sin was in saying, "Soul, thou hast much goods laid up for many years; take thine ease, eat, drink, and be merry."

Our Lord points out the great madness and the great sin of being thus at rest, and trusting in earthly possessions; and then with a "Therefore, I say unto you." He turns to the opposite pole of worldly feeling, and shows us how, although opposite, it is yet related. The warning, "Take no thought for your life" follows as an inference from the picture of the folly of the man that lays up treasure for himself and is not rich towards God.

SPAIN has some devoted laborers at work in different parts of the peninsula. One of these, whose wide range of experience and observation give weight to his testimony, writes: "From what I have seen while journeying in parts of the center, north and northeast of Spain, and further from what I have heard by correspondence and otherwise, I am convinced that the Gospel leaven is quietly spreading all over the land. We are apt to forget that, as a rule, God's work in grace is like God's work in nature: the seed is sown, is covered up, and in darkness and silence, unobserved, it strikes root downwards, only appearing and growing upwards when so rooted. The Gospel seed, which has been largely sown in Spain through chapels, Sunday and day-schools, evangelists, and especially through the wide circulation of the Scriptures and a very wide circulation of tracts, is taking root, and in due time the fact will be seen and recognized. Such being the case—I am sure I may be allowed to speak in the name of the Christian laborers of Spain—we hear with pain and dismay that the funds of some great Christian agencies have so decreased as to compel them to decrease the staff through which excellent service was done for the Savior's cause. Above all is this to be deplored in the case of the colporteurs. The real evangelist in Spain is the godly colporteur. A reduced staff of colporteurs means a reduced area of work all over Spain.

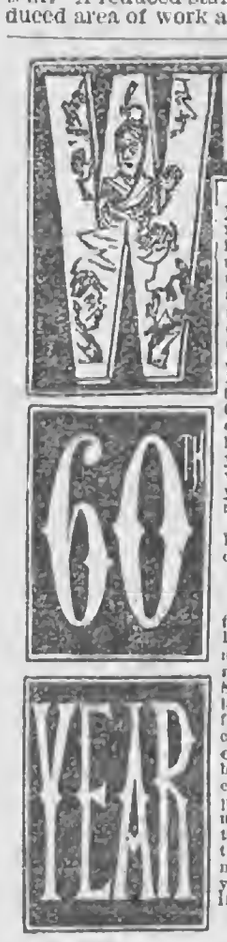
☞ A set of our new Chromo Cards sent on receipt of stamp.

JOHNSON, CLARK & CO.,
Union Square, New York City.

50 Lithographed Chromo Cards, no 2 alike, 10c. Name in fancy type. CONN. CARD CO., Northford, Ct.



WELL I AM SURPRISED! SO IS EVERYBODY.

Why? Because the illustrations exactly represent the **18 k. Rolled Gold Solid Rings** we absolutely **Give Away!** In addition, we will engrave any name, initials, motto, or sentiment desired on the inside, pack it securely, mail it postpaid, and guarantee it to reach you safely, warrant it to wear, and prove a suitable and valuable present for any lady, gentleman, or child. "How can you do it?" you ask. Let us explain: 1st, we own the old **Saturday Evening Post**, of Philadelphia, and have ample means to do all we promise; 2d, we want **50,000 New Subscribers**, and as we generally get what we want, we determined to **spend $50,000** to get them, if necessary. Read our offer carefully, and you will agree with us that we shall get them. **OUR OFFER: Upon receipt of One Dollar**, on or before **January 31, 1881**, we agree to send to any **new subscriber**, **The Saturday Evening Post**, postpaid, **weekly**, for **6 months** (26 times); and we further agree to send, as a **Premium Gift**, an elegant plain **18 karat Rolled Gold Solid Ring**, with any name, date, motto, initials, or sentiment engraved on the inside, postpaid. We also guarantee its safe delivery, warrant it to look well, to wear for years, and if any first-class jeweler will say the Ring plane is not worth the amount you have paid for the *Post* and ring, we will cheerfully refund the money. **We mean and will do just what we say.** We want a large list of subscribers in your neighborhood, and we know, after you receive your ring and the *Post*, you will show the paper to your friends, refer to its merits, and advise them to subscribe, as we have recently **reduced the price from $3.00 to $2.00 a year.**

HALF-ROUND RING.

CLUBS.—A club of ten ordered at one time, accompanied by $10, entitles the sender to *Post* and Ring, **free**. A club of five ordered at one time, accompanied by $5, entitles the sender to either the Ring or *Post* 6 months. Every club subscriber receives the Ring premium.

"TIME TRIES ALL THINGS."

The *Post* is not an experiment; it is the oldest literary and family paper in America, now in its **sixtieth year**, and this offer should not be confounded with the tempting promises of irresponsible parties. It is a large sixteen-page weekly, elegantly printed, folded, cut, and bound. Its fiction is of the highest order—the very best thought of the best writers of Europe and America. It **covers the whole field of a first-class family paper; has Fashion, Needlework, Fireside Chat, Answers to Inquirers, Scientific, News, and other departments, Sketches, Narratives, etc.** Each volume contains twenty-six Serials, from the pens of the best living authors, and upwards of five hundred short stories, and furnishes an amount of strictly first-class reading matter, alike interesting to every member of the home circle, which can be obtained nowhere else. **At $2.00 a year the Post is the cheapest paper in existence to-day.** The *Post* has never missed an issue, and as to our reliability we refer you to any bank, express office, or reputable business house in Philadelphia. If this unparalleled offer does not interest you personally, or on behalf of some relative or friend, please call it to the attention of some one who will appreciate it. This offer will not be good after the date named. In ordering, send size, and state which of the two rings you desire, the **Band** or **Half-Round**. To ascertain the size wanted, take a slip of paper and place it around the finger you wish to fit, cut so it will just meet around the finger, send the slip to us, and we will send you a ring that will fit you. N. B.—If not engraved, we will mail your ring on same day order is received; if engraved, your order will be filled within a few days. Address,

THE SATURDAY EVENING POST, 726 Sansom St., Philadelphia, Pa.

BAND RING.

PERSONAL ITEMS.

Kellogg, of Louisiana, is a large manufacturer in the sugar trade. He sells mainly in Texas.

Colonel Ingersoll is so honest a pagan that he refuses to deceive a trout with an artificial fly.

Judge Tourgee, author of "The Fool's Errand," is of medium hight, weighing about 150 pounds, and he has dark hair and eyes. He is supposed to have a promising political future before him in Colorado.

Mr. and Mrs Smith Hayden of Marshall, Texas, quarreled about the doctrine of baptism on getting home from church, where they had heard it preached about, and the wife in her passion struck the husband a fatal blow with an axe.

It is said of the Baron Ricasoli, the great Italian statesman who has recently died: "He was seventy-one years old, and during all those seventy-one years he never did an act unworthy of a patriot and an honest man, and never heard his integrity called in question by his wildest political enemy."

It is rumored that the Czar intends, in the event of his abdication, to fix his residence in the Crimean Palace of Livadia, which is certainly as delightful a retreat from the cares of State as any ruler could wish. The little port of Yalta, twelve miles distant from Balaklava and eighteen from Sebastopol, lies in the hollow of a tiny bay formed by the curve of a huge sloping ridge, half way up which stands the Czar's palace.

When a band serenades General Grant it is the best policy for the members to choose the easiest tune. The General does not know one tune from another. The other evening while a band was playing "The Last Rose of Summer" he said, "I always did like 'Home, Sweet Home,' especially that part of it which refers to the oaken bucket." The band began another air, "Yankee Doodle," and General Grant said, "I always did like that tune of 'Home, Sweet Home,' That refrain about 'Away Down Upon the Swanee River' always struck me as being very sentimental."

Help for the Great Army of Convalescents,

who, after an attack of disease, get so far back on the returning way to health and no farther. One of the most serious impediments which the medical profession has to encounter is the tendency in all diseases, whether acute or chronic, towards debility and loss of vital force. To meet this condition of low vitality, the Compound Oxygen, which acts directly on the great nervous centers, rendering them more efficient, vigorous and active, and capable of generating more and more of the vital forces, which are *life* and *health*, offers an agent of help and restoration which acts promptly and surely. Our Treatise on Compound Oxygen its Nature and Action, is sent free. Address Drs. STARKEY & PALEN, 1109 and 1111 Girard Street, Philadelphia, Pa.

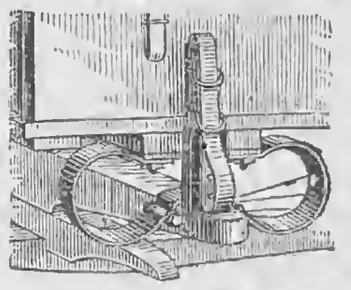
SOMETHING NEW!

PULLIAM'S PATENT BOLSTERS SPRINGS for FARM WAGONS.

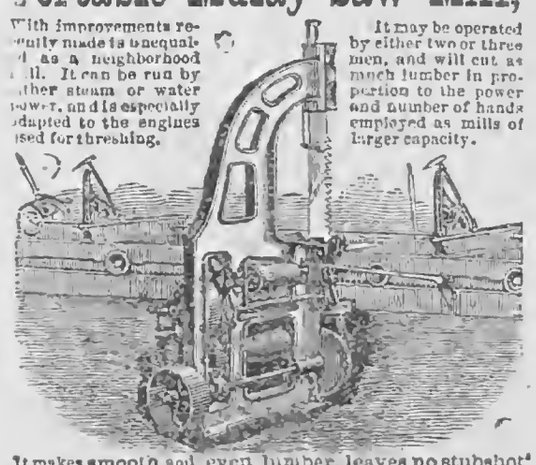


This valuable device is suited to wagons of any size—made of the best steel and warranted—are attached by four bolts through the bed—can be put on by any person. They remain on the wagon for all uses and work equally well whether with empty or loaded wagon. There is no use for a spring seat—they make a comfortable spring wagon out of a farm wagon—and save largely in wear and tear. We want Agents every where. Send for description and prices, and mention this paper.

TEMPLE & BIRGE MFG. CO., St. Louis, Mo.

Portable Mulay Saw Mill,

With improvements recently made is unequalled as a neighborhood mill. It can be run by either steam or water power, and is especially adapted to the engines used for threshing.



It may be operated by either two or three men, and will cut as much lumber in proportion to the power and number of hands employed as mills of larger capacity.

It makes smooth and even lumber, leaves no stubshot and will cut any sized log up to ten feet in diameter. It may be transported from one locality to another and re-erected ready for sawing in from two to three days, and can be made profitable in localities where there is not sufficient timber to justify the erection of a large mill. Send for descriptive circular, price, etc., to CHANDLER & TAYLOR, Indianapolis, Ind.

WINTER DAIRYING A SUCCESS

By using **THE FERGUSON BUREAU CREAMERY.**

No special room or extra fire needed. Gilt-Edged Butter made at all times, winter or summer. It surpasses all others in quantity and quality of butter made. It excludes flies, dust and odors; is constantly at the correct temperature (55° to 60°); has room for the cream and butter, and saves three-fourths the labor.

THE FERGUSON CONCUSSION CHURN is the best. It combines scientific principles with the best labor saving devices. No floats or paddles. Brings the butter in granular form, and secures the largest yield. Send for illustrated circular to **The FERGUSON M'F'G CO., Burlington, Vt.** Ag'ts Wanted.

WATCH BUYERS, ATTENTION

The celebrated Borel and Courvoisier Watches were awarded the first prize in London in '62, grand prize at Paris in '67, first prize at Centennial in Philadelphia, and lastly gold medal at Paris in '78. These watches have stood the test for the past 20 years, and pronounced by best judges equal to any made. They all have Nickel Movements, Tempered and Hardened Breguet Hair Springs. Ischronised for railroad use in Key and Stem Winders, with all modern improvements in the art of watch making. Large numbers are in use on the principal railroads in the country. As a guarantee that they are what we claim for them, we refer by permission to the dealers named below who have sold them for years:

Factories and General Office, Springfield, Mass., U.S.A.

New York Office, 12 Maiden Lane.

Humorous.

A LITTLE girl, noting the gold in her aunt's front tooth, exclaimed: "Aunt Mary, I wish I had copper-toed teeth like yours."

SCENE in an oyster-house—"See here, these oysters are spoiled." "That's all right; I put in twice as many on that account."

"John," said a doting parent to her gormandizing son, "do you really think you can eat the whole of that pudding with impunity?" "I don't know, ma," replied the young hopeful, "but I can with a spoon!"

"MY case is just here," said a citizen to a lawyer the other day; "the plaintiff will swear that I hit him. I will swear that I did not. Now, what can you lawyers make out of that if we go to trial?" "Five dollars apieee," was the prompt reply.

"WELL, what do you think of X.'s new five-act tragedy?" "Hum! There were five of us in our box, not bad judges of a play as judges go, and we all agreed that one act should have been omitted." "Indeed! Which act?" 'Well, no two of us agreed on that point."

"THRASHING by steam," murmured a fond mother as she glanced at an article in an agricultural paper. "What git-ups they do have nowadays. If I had had one of those steam thrashers for my four boys, my arms wouldn't have been as rheumaticky as they are to-day," and she dreamily thought of the past as it might have been.

When Distinguished Members

Of a learned profession like that of medicine testify to a fact, their evidence is deemed authoritative,—it ought to, and does carry conviction with it. The indorsement of Hostetter's Stomach Bitters by medical practitioners of eminence, is a matter of daily occurrence and wide publicity. The professional sanction of it finds an echo in expressed popular opinion, and in the columns of the newspaper press of this and other countries. The only rational conclusion to be drawn from the unparalleled success of this medicine, in cases of fever and ague, dyspepsia, constipation, liver complaint, debility, rheumatism, kidney and bladder ailments—a success which the general verdict has stamped as genuine and unmistakable, is that it is a medicine both thorough in action and comprehensive in its uses. But like all great remedies it should in all cases receive that fair, impartial test to which its merits and reputation entitle it.

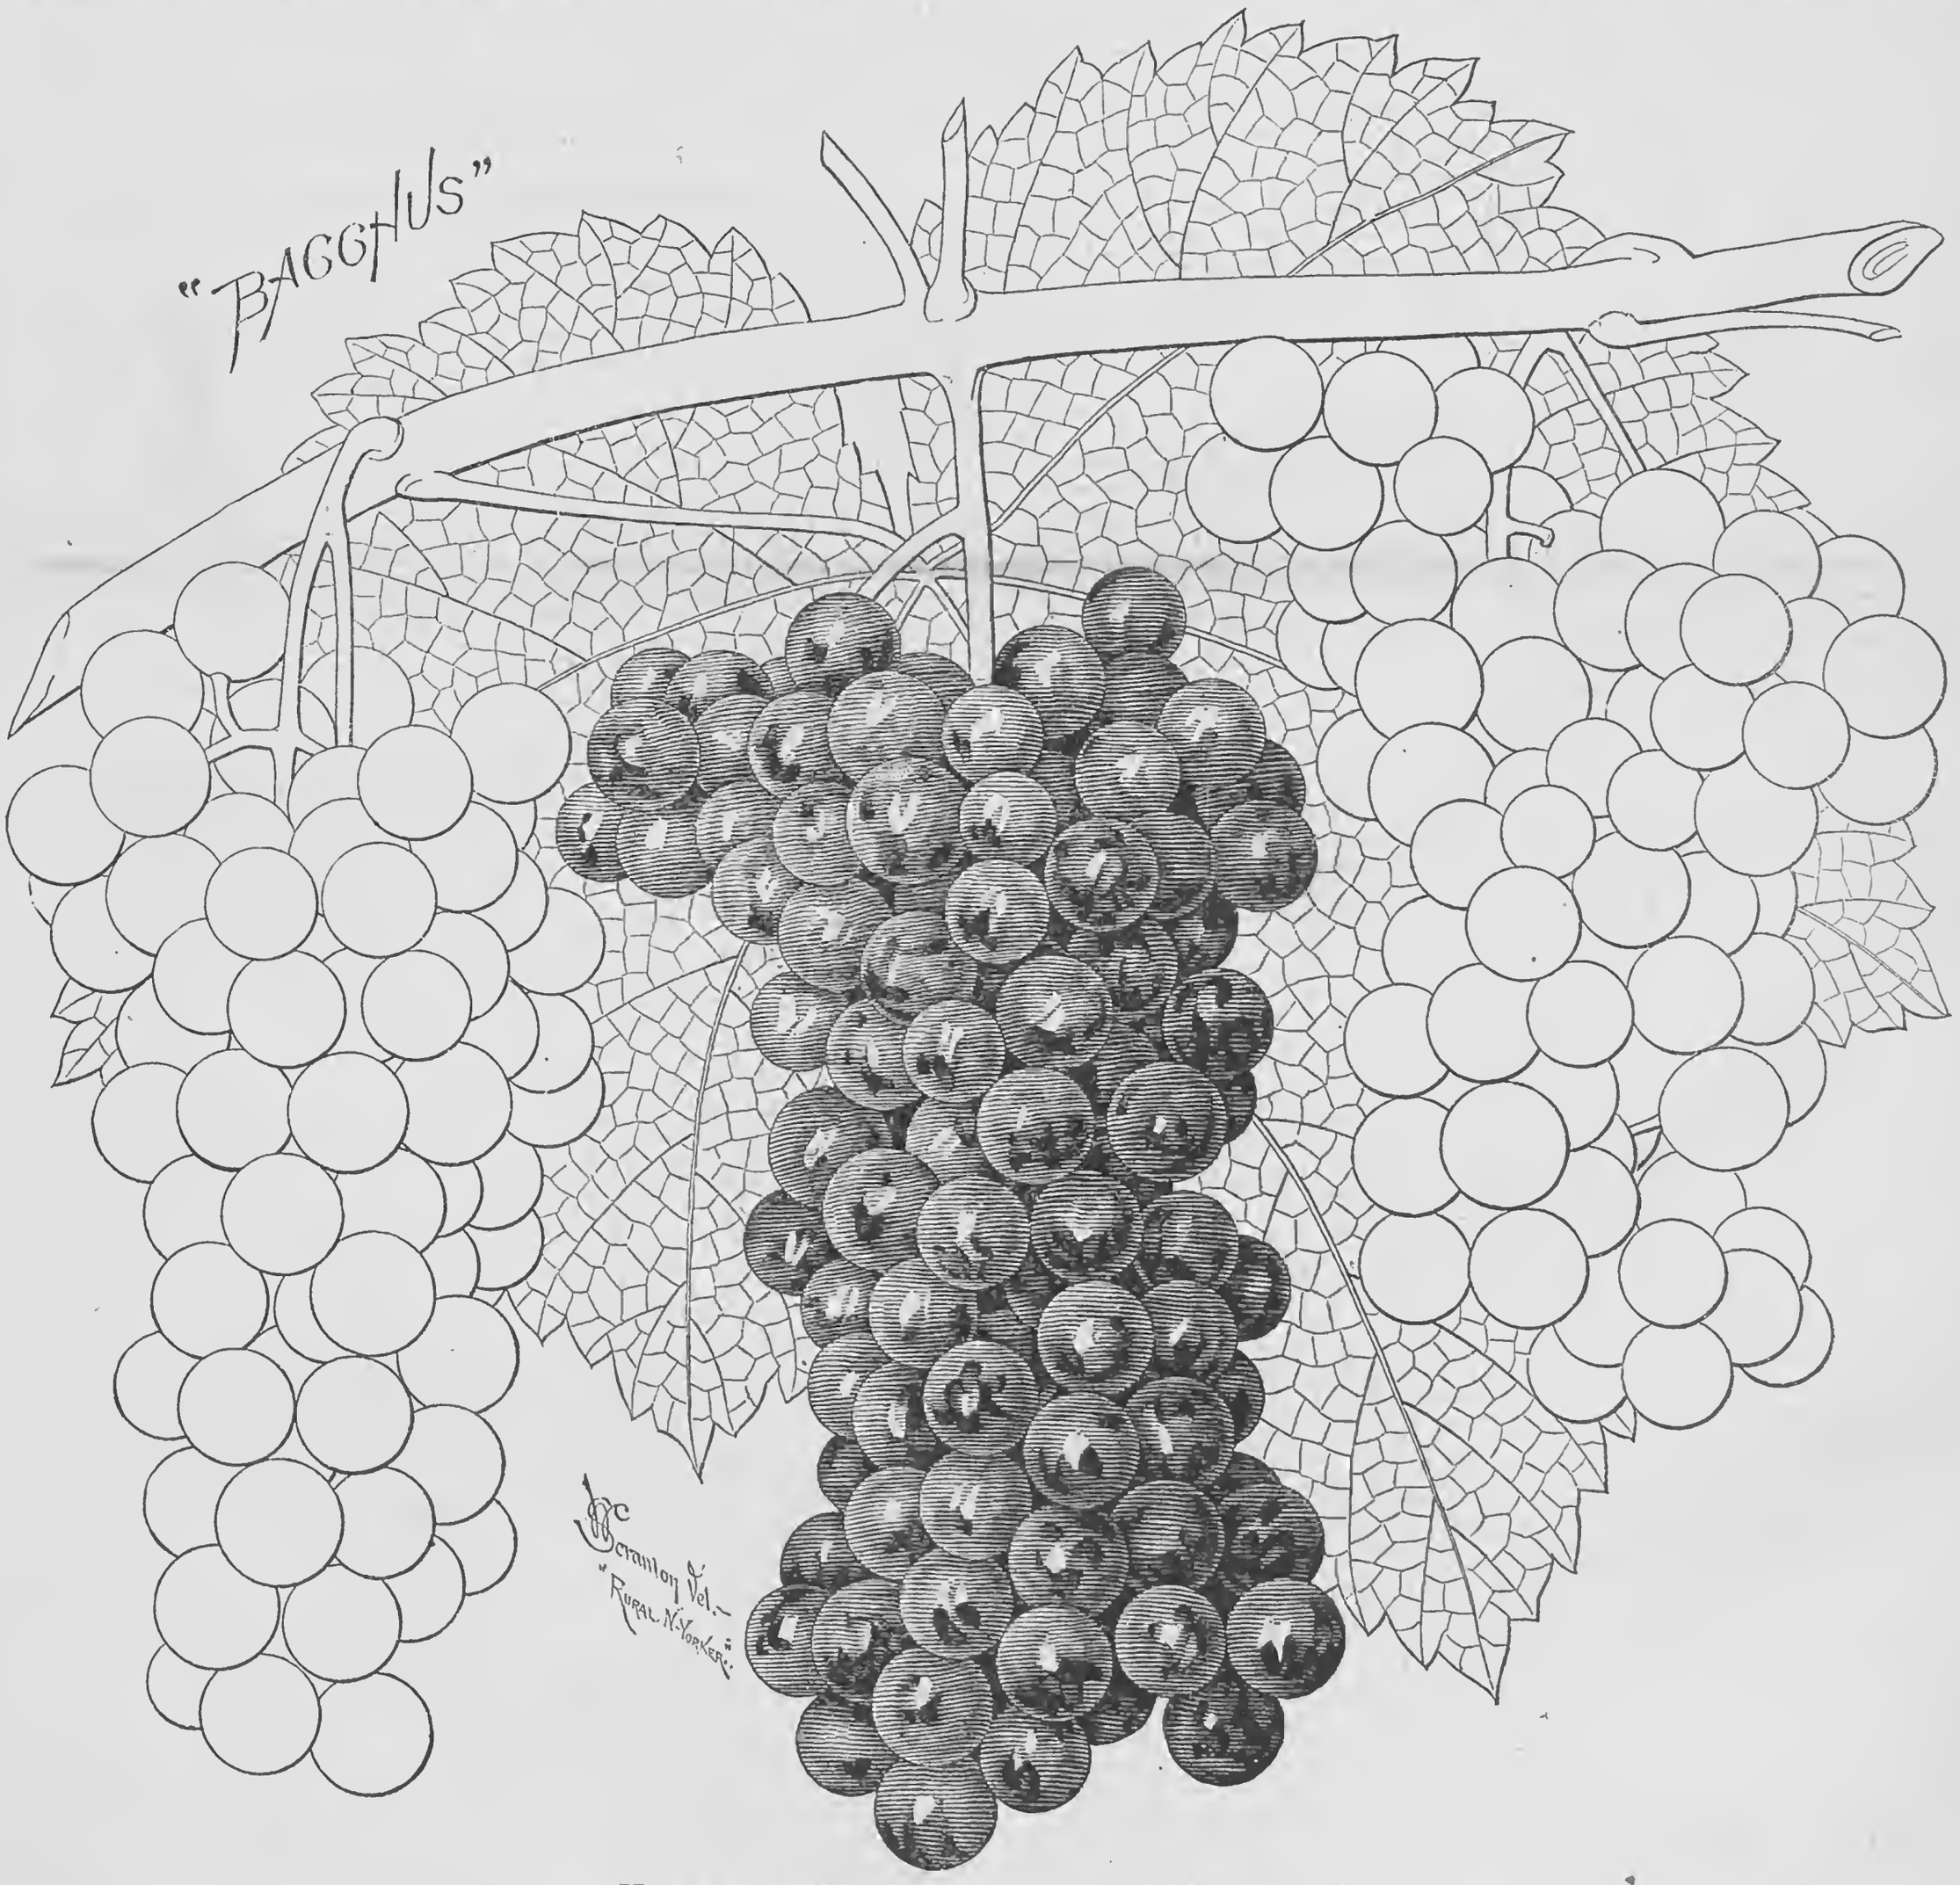
The Vineyard.

OUR GRAPE PORTRAITS CONTINUED.

The Bacchus Grape.

AMONG the bunches of different kinds of grapes which Mr. Ricketts brought to this office early in the Fall was the Bacchus, an engraving of three bunches of which (two in outline) is presented on this page. It is a wine grape. The berry is medium in size, as shown; pulp, half tender and juicy; color, black with bloom. The vine is said to be vigorous, hardy and productive, while the bunches, as may be seen, are shouldered and about six inches long. It is a seedling of the Clinton, and Mr. Ricketts says that it has with him stood all possible tests for 12 years as to hardiness of leaf and fruit. Nothing is known as to whether it will thrive in different soils and situations or not. Those who purchase the grape must take the risk, for they have nothing to guide them. Mr. Ricketts has exhibited this grape at many fairs, and those who have eaten it agree, it is said, that it combines all of the peculiar qualities necessary in a wine grape of the first merit. It seems that the Bacchus grows readily from cuttings, 952 having grown out of 1,000.



THE BACCHUS GRAPE—From Life.—Fig. 414.

The Duchess Grape.

Under date of Nov. 26th, Messrs. A. J. Caywood & Son, of Marlborough, N. Y., write us:

"We send you by mail to-day a taste of the Duchess Grape. We ought to have sent them while they were fresh, but failed to do so through an oversight. These have been lying on a shelf in a closet for the past two months, and all our best clusters are gone. Mr. Charles Downing told us last night that the clusters we sent him six weeks ago are lying on the shelf, perfect, except that they are beginning to raisin. He remarked that they were getting as sweet as a raisin."

[The little box was received during the late cold snap. We can repeat Mr. Downing's words, "They were beginning to raisin," and "were as sweet as a raisin." To our taste the Duchess is an excellent grape. There is no acidity about it, no foxiness; the flesh is tender, the vine hardy and prolific. If we were

setting out a new vineyard, we should *want* many of the new grapes that have of late years been announced; but if we could not have them all, the Duchess would not be one of those marked off the list.—ED.]

How the Grape-Vine Bears Fruit.

"The grape-vine bears fruit only upon canes of the previous year's growth;" so says the RURAL. I am pleased to say if such be the case, that I have several vines that are of different behavior, if I rightly understand the RURAL; for they put out canes from the previous year's growth, and on these new canes or shoots the fruit is borne. Is not that the usual way? If there are vines which behave differently I would like to obtain *one*. [The fruit buds exist on the canes of the previous year's growth. These buds push and bear fruit. Now, is not the statement plain enough? —EDS.] The Cuthbert Raspberry plants received from the RURAL's distribution last year, came safely to hand, and they had *roots*, too, very fine ones; but owing to there being snow on the ground and that frozen, I covered them in a box of soil for a week or two, at the end of which I broke up the frozen ground and put them out; but in the Spring I had to set them in a new place, still they made a very fair growth from which I hope to obtain a few berries next season. W. H. WHITE.

Worcester Co., Mass.

THE NIAGARA.—Mr. Woodward writes as follows:—"I must confess myself a little surprised that you should pronounce it (Niagara) no better than Concord and can only explain the fact on the ground that your Concords must be much better than ours. Grown side by side here with Concords, it is as much better than they, as they are better than Champions. In fact, I have given it to some fine judges of grapes side by side with Rebeccas grown in the same vineyard, they not knowing "which was which," and have every time found them to pronounce it better than that famous sort."

Do Bees Puncture Grapes?

The Semi-tropic California says: "Place a bunch of perfectly sound grapes near your bee-hives, and in a few hours examine them and see if the bees have eaten any; if not, puncture several with a pin and note the effect on the sound grapes and the ones punctured, and then let us know if the bees really eat grapes. We ask for a full test, and reports from grape-growers and bee-keepers."

Having picked up the RURAL the other day, on looking through it, I came across the above paragraph and thought I would give you an account of what the bees and wasps did for my grapes this season. Perhaps it is nothing new to professional growers, but it is new to me and perhaps will be so to other amateurs.

I have in my garden 12 different varieties of Rogers's best numbers, all bearing and young ones. One vine (the number I cannot tell) is, or rather the fruit is, very much like the Delaware, only the berry is larger and the bunch longer and not so compact; but it is very sweet, nothing acid about it whatever. Towards the end of the season, I noticed that many of the bunches had been about half eaten by something, only the skins of the berries remaining; at first I supposed the injury to be done by the birds, but on closer examination I found swarms of bees about the grapes and noticed that they made a puncture in the berry, and afterwards the wasp finished it by eating everything inside except the skin and seeds. The skin then dried hard and the bunch became almost unfit to eat. On this particular vine I can safely say more than half the grapes were destroyed in this way. For the three years I have had these grapes, this is the first time I have known bees to attack them. I may also add the other kinds, such as the large and small blue sorts, in fact, all the other varieties were left untouched. I do not believe there is any remedy for their destruction. But as to all appearance the bees have had their first taste of grapes in this part of the country; next year they will, perhaps, come in swarms so that the people here will have very few grapes to pick after the bees shall have taken all that may be good, to make honey for other people.

PEACHES.

T. T. LYON.

The Commercial and the Amateur Idea.

APPEARANCE VS. QUALITY.—In the marketing of fruits, although none of the yellow peaches will compare favorably with many of the pale-fleshed, so far as quality and delicacy of texture are concerned, the market persistently demands yellow varieties, apparently on account of the richer and more attractive color of the flesh. Possibly in Eastern markets this preference may be less positive; but at the West it is so decided that commercial orchards, as a rule, are almost wholly made up of the yellow-fleshed kinds; the principal exceptions being the earlier varieties which mature before the advent of the yellow favorites.

THE NEWER VERY EARLY VARIETIES, Downing, Wilder and Saunders, sent out a few years since by Engle, of Pennsylvania, are yet too recent to have established a reputation; but, so far, they have matured little if at all in advance of Alexander and Amsden, and have developed no qualities, whether of earliness, flavor or size, entitling them, or either of them, to claim precedence. They seem to be similar to the Amsden and Alexander in most respects, including the objectionable tendency of the flesh to adhere to the pit.

ALEXANDER AND AMSDEN are so entirely similar in both tree and fruit as to be practically indistinguishable; hence although certainly of separate origin, they may, for all practical purposes, be treated as identical. Like their supposed parent, Hale's Early, the flesh adheres to the pit, and they have also its objectionable tendency to rot before maturing. In spite, however, of these objections they are, at least at the West, becoming somewhat prominent as market varieties.

BRIGG'S RED MAY has hardly yet established a character on the eastern slope of the continent; although where it has fruited it seems to have created a favorable impression. It is certainly a very beautiful, fine-sized fruit, of good quality. The fact, however, that it is a serrated-leaved variety will be a mark against it, only to be wiped out by continued and successful experience.

EARLY BEATRICE can hardly now be called a new peach even in this country. It has the reputation of being too small; but its earliness may be considered as in some sense an offset to this objection, while its fine color and high quality (for so early a peach) certainly render it desirable, at least as a variety to be planted for home use.

EARLY LOUISE is open to the objection of being too small; but coming in immediately after the preceding, it fills a place not otherwise provided for. In color and flavor it is satisfactory.

EARLY RIVERS, although destitute of red, is, nevertheless, a very striking and attractive peach. Considering its beauty, fine size and excellent quality, it is well worthy of consideration by both the commercial and the amateur planter. It is rather delicate in texture, and hence will require careful handling; besides which the pits are almost invariably cracked open. Nothwithstanding these drawbacks, it is gaining in favor even among market planters.

GEORGE THE FOURTH is one of the old amateur, pale-fleshed sorts, that cannot yet be dispensed with. It is too delicate in texture for railroad transit to market, notwithstanding which it is not without favor even among market planters.

HALE'S EARLY comes before it, and, despite its adhesion to the pit and a tendency to rot before ripening, it remains one of the most profitable market varieties, at least in the Michigan fruit belt, where the open, airy exposure, especially upon light soil, seems to act as a check upon this tendency. In interior, sheltered localities and on heavy soils, the tendency is aggravated; and the variety becomes unprofitable. As we go northward along the easterly shore of Lake Michigan, this liability to rot entirely disappears.

SERRATE EARLY YORK is still considered a fine peach, where known, but its tendency to mildew of the foliage is fatal to its popularity at the North. At the South it is believed to be more popular.

EARLY TILLOTTSON is liable to the same objection in even a greater degree. It also is more successful at the South.

COOLEDGE'S FAVORITE is a fine amateur, pale-fleshed peach, in season after George IV., and preceding the Early Crawford, coming in at a season when it has few competitors. It is desirable only for home uses.

TROTH'S EARLY is desirable only as a prolific, early market peach, and hardly good enough for even that purpose.

SNOW AND SNOWFLAKE are white, entirely without red, and desirable for special uses on that account. They may prove identical.

THE CLARK APPLE.

MR. ISAAC F. TILLINGHAST, of La Plume, Lackawanna Co., Pa., writes us with regard to this apple:

"Knowing your interest in new fruits and vegetables, I send you by express to-day a box containing some specimens of the "Clark Apple" a variety which originated in this county some 25 years ago. The tree is a rapid grower, and an early and profuse bearer. The fruit is always fair and smooth, and is thought by all who know it here to be of most excellent quality—but of that I wish you to judge. It never has been brought to the attention of nurserymen, and I think it would become very popular if it were only known. Its season is from October 1st to January, though I have seen some of its fruit kept till Spring. I think that the original tree, a chance seedling, still stands but a few miles from my office. Its name was derived from the farm on which it grew. There are no young trees in existence, but cions can be furnished."

We sent some specimens of the fruit to Mr. Charles Downing, of Newburgh, N. Y., together with Mr. Tillinghast's account of the apple, and have received from him the following comments thereon:

"The Clark apples were received in good condition. Specimens have been sent to me for two seasons in succession by Samuel Stevenson, Clark's Green, Lackawanna Co., Pa., who informs me that it originated with Deacon Wm. Clark about 100 years ago, and that the tree is still standing in the village of Clark's Green. Mr. Stevenson says that it is very popular in that locality, but has been disseminated but little out of the neighborhood of the place of its origin. It is a very tender, pleasant-eating apple—not rich, but one almost any person can eat without being surfeited. It has just sufficient sugar and acid to make it agreeable. Mr. Stevenson writes me that the tree is vigorous, and a prolific bearer on alternate years, and the fruit ripens, or rather is in use, from October to January.

There is some little difference in the statements of Mr. Stevenson and Mr. Tillinghast; the former states that the tree is 100 years old, while Mr. Tillinghast says it originated in his county some 25 years ago and the tree still stands a few miles from his office. I do not know how far La Plume is from Clark's Green, but I have no doubt that they are the same apple." See page 815 for portrait.

The Ella Park Apple.

Nine years ago, with grafts of some other varieties, I obtained from a nursery in Kansas City, a few cions with labels bearing the above name. As I was not particularly anxious to hasten the fruiting of the variety, these with others were root-grafted, and set out in nursery rows in the Spring following. Subsequent events caused the "Ella Park" to be overlooked. Four years after planting, the "block" in which they had stood was being "cleared" of the crooked and unsalable trees remaining after the Spring sales of '76, when by accident the few trees of this kind came under notice. Two trees were selected, and "heeled in" for my own planting, where pressure of other work caused them to remain another year, when they were so injured by neglect as to be discarded, not, however, without first cutting a few grafts, which were set in a bearing tree for trial. Last year a few specimens of fruit were produced by the grafts, which, however, received no attention. This year, though, they fruited plentifully, some of the apples being very fine in size and external appearance. This fact aroused sufficient interest to induce me to look after the variety, but I cannot now find any description of either fruit or tree, which leads to the inference that it is not propagated to the extent that its apparent merits would justify. The fruit is large to very large, roundish, yellow, covered entirely and evenly with crimson, the color being similar to that of the "Kane" apple, as described by Downing, and which is well known in this section; flesh yellowish, and at this date, too solid to judge fairly of its quality, though I think it will out-rank the Baldwin in this particular, which, however, is possible without its attaining to any very high standard of excellence. Upon the whole, I am greatly pleased with the "Ella Park," and believe it will have many friends here when once known. J. W. KER.

Caroline County, Md.

Arboricultural.

SOME MERITS IN THE AILANTHUS.

PROFESSOR F. H. STORER.

ON page 769 of the RURAL, you remark *briefly*: "It is hard to find out what any one wants an ailanthus for." "if it were the only tree that grew upon the earth—" you go on to say! Now it seems to me that the ailanthus is almost, if not quite, *the only tree on earth*, of so comely appearance, which will grow in certain places, and I will try to make it plain to you why I, for one, wish for and esteem the ailanthus in places which it is fitted to fill. I understand, of course, that your remark applied to the door-yard and garden-lot, and that you wish to keep out of range of the odor of the ailanthus blossoms; with all of which I cordially agree. We will certainly do well in keeping the mature ailanthus (when in blossom) at something more than arm's length. Three particular merits of the ailanthus occur to me, which are so distinct and well-marked that they should be more widely known than they seem to be.

1.—Few trees can so well bear the drip of evergreens as this. Hence in many situations the ailanthus is peculiarly well-fitted for filling in gaps between evergreens, or for growing on the edges of pine groves to conceal any bareness or raggedness which may exist where the lower branches of the pines have died, or where some of the trees have been injured by wind or by insects. Several years since, I lived upon a small place where there was a row of large White Pines close to the public road, and beneath them were a great number of ailanthus trees of various sizes—most of them rather young—which grew up to and overlapped the lower branches of the pines. This ailanthus thicket screened and concealed both the dusty road and the bare trunks and the interior limbs of the pines, while the contrast between the light, lively green of the ailanthus leaves and the dark somber foliage of the pines was extremely agreeable to the eye. I have seldom seen a more effective bit of tree grouping than was afforded by this wholly unpremeditated arrangement. In a case like this, young trees are perfectly competent to produce the desired effect. More mature trees might be cut down as soon as they began to bear blossoms and become unpleasantly odorous.

2.—The Ailanthus will grow freely in a darker shade, whether of trees or buildings, than any other equally ornamental tree with which I am acquainted. I have grown them in the very heart of a city (Boston) on the north side of a high brick building exposed to darkness, smoke, dust, and grime, where the conditions were most unfavorable for vegetable life; yet the trees throve in this situation. Naturally enough, they grew upward continually, with very slender trunks, and had to be braced and tied firmly to the building or they would have fallen of their own weight. It is not seldom that a cold, dark wall or building, such as this, had better be concealed from the eye by foliage. The ailanthus enables us to effect such concealment readily and cheaply.

3. Very few trees or plants are better adapted than the ailanthus for binding and improving sandy soils, and there are numberless localities where the growth of the tree should be encouraged to this end. Not only will the ailanthus grow in almost any place, not too completely devoid of water, provided the climate is suitable, but every Autumn it drops an enormous proportion of litter upon the land, and the character of this litter is peculiarly well suited for covering the soil and improving it, since the great foot-stalks of the leaves are so large and heavy that they are comparatively little acted upon by the wind. These stalks not only remain themselves beneath the trees but they bind and overlie many leaves and keep them in place. Any one familiar with the tree will see at a glance that the droppings from the ailanthus must tend to remain where they have fallen to a much greater extent than the leaves of most other trees. That is to say, a large proportion of the ailanthus litter comes to rest just where it is wanted when we are striving to bind a sandy plain by its means. The brittleness of the young wood and branches of the tree may perhaps be no disadvantage, as regards the service now in question, for the branches broken and torn off by the wind would but be added to the other accumulations of vegetable matter beneath the trees. The merit of the ailanthus for binding sands has been made tolerably familiar to American readers by the writings of Mr. Marsh. In describing the improvement of certain sand plains near Odessa (see his "Man and Nature," page 515, and his "Earth as Modified by Human Action" page 608), he says: "The tree best suited to this locality and, as there is good reason to suppose to sand plains in general, is the Ailanthus glandulosa. The remarkable success which has crowned the experiments with the ailanthus at Odessa, will, no doubt, stimulate to similar trials elsewhere, and it seems not improbable that the Arundo and the Maritime Pine, which have fixed so many thousand acres of drifting sands in Western Europe, will be, partially at least, superseded by the tamarisk and the ailanthus." "Sixteen years ago," says an Odessa landholder, "I attempted to fix the sand of the steppes, which covers the rock ground to the depth of a foot, and forms moving hillocks with every change of wind. I tried acacias and pines in vain; neither would grow in such a soil. At length I planted the ailanthus, which succeeded completely in binding the sand." "This result encouraged the proprietor to extend his plantations over both dunes and sand steppes, and in the course of sixteen years this rapidly growing tree had formed real forests."

Horticultural.

Depth in Soil.

Some years ago, visiting the nursery of a prominent florist near Boston, whose specialty was the production and sale of roses the year round, I observed that the earth in which they were planted was from four to six feet deep, and he told me that that was the main cause of his flowers blooming and bearing as they did. A year since I observed that a gardener near our

village, after his land was plowed in the Fall, had it all spaded yet deeper, the stones removed and the whole work done in Old Country style where labor is cheap enough to allow such luxuries. The results this season spoke for themselves, and in addition to these were the comparatively light hoeing and weeding, and so satisfied was I with what I saw and learnt thereby, that one-half of my large garden has been this Fall treated in the same way and the balance will be another season. Old gardens lightly plowed and dug get "case-hardened" at the bottom and allow neither water nor air to permeate freely, whilst a great depth of soil supplies perfect drainage and aeration, and consequently warmth and more even temperature all the time. The manurial matters are more perfectly distributed in the latter condition and not so soon exhausted and dried up, the ground is worked more easily and is more productive. Gardens continued in the same place year after year require, more than others, this deepening of the soil and occasionally a good sprinkling of salt. R. G.

Lenox, Mass.

THE YELLOW OVOID MANGELS are a surprise to me. With no extra care they have grown to a large size, and are of just the right form for compact storage. They prove to be excellent for table as well as for stock, and, what is of equal importance, they are easily lifted from the ground by hand. I class them with Lane's Improved Sugar Beet as my two best varieties. The parsnip has been a favorite root with me for feeding, as it so admirably resists drought; but the difficulty of digging the roots will hereafter put them in the corner. I am surprised to see how few farmers grow the salsify. Properly cooked it is an invaluable vegetable. Leave most of them in the ground until Spring, with the parsnips; but bury a few in a box in the cellar for Winter use; also a few parsnips. Cover them well with rather dry earth. E. P. POWELL.

Oneida Co., N. Y.

Field Crops.

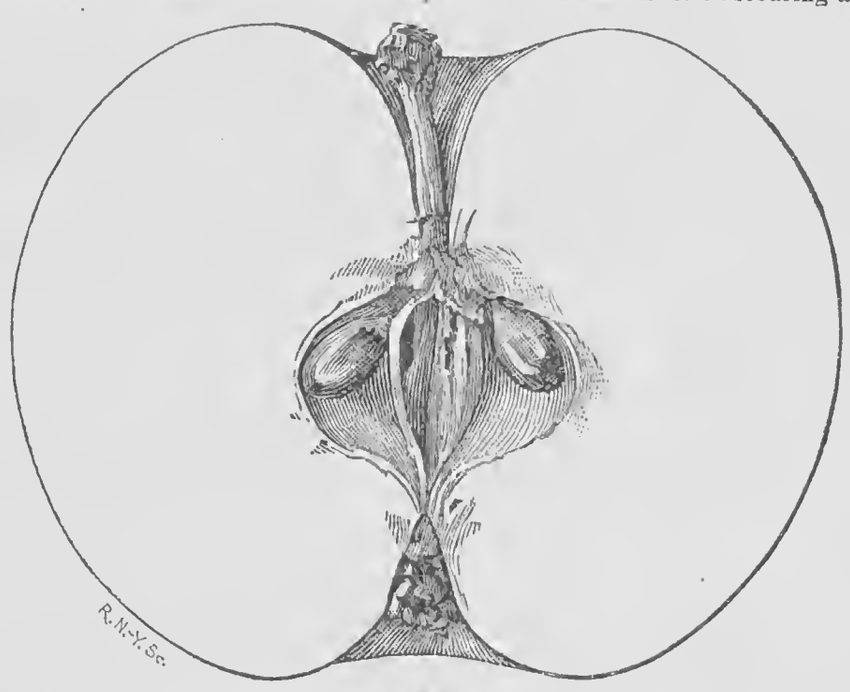
CUZCO CORN.

RURAL readers may remember what has been said respecting Cuzco Corn in these columns. The kernels are immense—so large, in fact, as to be curiosities. A friend in California sent us a quantity of the grain, and we, reserving a small quantity to try at the Rural Farm, sent it to a number of our subscribers in the South. The reports so far received are, "immense stalks—no ears," or "mere nubbins." Of the row planted at our farm, only two plants grew. One of these showed two sets, which in due time developed silk, showing they were ready to receive the pollen. But there was no pollen. That from the tassels above had matured and fallen several days previously, while other corn in neighboring fields was beginning to ripen. As before stated, there was not a kernel upon the two cobs, which were about six inches long and covered by heavy husks. For the same reason, probably, the little lots sent South failed. In many varieties of Indian corn we have found, as stated two years ago, that there is a difference of several days between the ripening of the pollen and the appearance of the silk. It follows that the ears upon a given stalk in such cases must depend upon other plants for pollen.

Last season was very favorable for corn, and although the Cuzco was planted late, it had time to have reached the milk stage of maturity, at least. In further trials of this it would be well to make two or three plantings, each three or four days after the other, so that the silk of most of the plants when appearing would have pollen for fertilization. At best, however, we do not believe this South American Cuzco Corn is worth anything, though advertised last season in several papers as a wonder. The bigness of the kernel cannot, under the most favorable circumstances, compensate for the smallness of the ear. It might, perhaps, prove of value if, by crossing, we could increase the size of some of our best corn while suppressing every other characteristic of the Cuzco.

EXPERIMENTING WITH POTATOES AND SMALL FRUITS.

For several years I have been trying to produce new varieties of potatoes or sports at will by the selection of eyes. I find no difficulty in changing the color of potatoes, and sometimes the form and quality, as well as the time of ripening, etc. I have produced a variety I have named the Buff Peachblow, which has yielded twice as much as the colored or ordinary Peachblow, and ripened six weeks earlier, both kinds having been planted at the same date and having received precisely the same treatment. The quality is the same in both cases, or perhaps mine do not waste so much



THE CLARK APPLE—FIG. 415.

in boiling as the original or colored Peachblow.

The origin of another variety is as follows: I found a volunteer potato in the garden with one colored eye, the others being perfectly white, as was the tuber. From the colored eye I raised one potato, a dark purple—and one pure white. They grew to about the size of a nutmeg the first season. After the fourth season's growth I find the colored potato a fixed type and a smooth tuber, perfect in form; in color, dark purple or Indian red, mottled with white. But I am yet somewhat doubtful about its quality, although some of our principal dealers pronounce it, after cooking, the very best. I somewhat fear the beauty of its appearance has influenced their taste in some degree. I have named it the Indiana. I am also trying to raise the eyes of all Peachblows to a level with the surface. In this attempt I have met with some success, but it is a tedious business. I have also the white potato that grew on the same stem with the Indiana or purple potato, and it is a curiosity. As yet it has no fixed form, except that it is not a long one. Its eyes are so smooth and level with the surface that they are hardly discernible by the sense of feeling. This season, for the first time, I have obtained one large, white, waxy-looking potato. I intend to cultivate this until its type is fixed.

Since I have got into the way of experimenting with potatoes, I have also been working in the same manner with the Snyder Blackberry, as well as with grapes, and some other small fruits. I have thus obtained a new blackberry of fixed type, but it is so difficult to tell just yet whether it is an improvement.

Bellevue, O. J. S. B.

THE ANNUAL PRODUCTION OF POTATOES for the last five years, according to the reports of the Department of Agriculture, has been 153,789,000 bushels. Of this quantity forty bushels out of every hundred have been grown in the New England States, New York, New Jersey, and Pennsylvania. In Maine potatoes and hay are the principal crops, and of food products the State exports little except potatoes. Vermont, Minnesota, Massachusetts and Michigan report the largest yields per acre, the yield in each being considerably over 100 bushels, while the average for the rest of the country is about 85 bushels per acre.

The Herdsman.

HOLSTEIN BULL—"UNCLE TOM."

OUR photographer was not so successful as we could have wished in securing a likeness of the bull which won first premium in the class of aged bulls of the so-called Holstein breed at Albany at the last State Fair. He is the property of Messrs. Smiths and Powell, of Syracuse, N. Y., whose herd, at the head of which he stands, is one of the most famous in the country.

"Uncle Tom," No. 163, (H. H. B.) is of a velvety black, with star in forehead, white legs and switch. He was dropped April 17, 1875, and bred by Mr. Gerrit S. Miller, of Peterboro, whose herd was noticed in the RURAL of November 27. His weight varies but little from 2,400 pounds, and he has won the first prize three years in succession at the State fairs, namely, at Elmira in 1878, at Utica in 1879, and this year at Albany. So completely does he fill the eye and meet the requirements of the admirers of this noble breed that it were a vain as well as a thankless task to criticise him. Though large and powerfully-framed, he is symmetrical in form and free in his movements, having a fine head and neck, deep brisket, capacious barrel, straight back, broad loin, deep flank, well-shaped legs and excellent hind-quarters. His disposition is gentle and quiet. He marks his get with his own prominent characteristics, thus evincing his own good breeding. He is by the famous "Rip Van Winkle," owned by Mr. Smith, and imported in his dam the cow "Fraulein," one of the four animals imported as the foundation of Mr. Smith's herd. She has a record of 70 pounds of milk in one day, and 1,873 pounds in one month.

Uncle Tom's dam is Topsey by imported Hollander, and her dam was Dowager, another of the same importation. Topsey gave as a two-year-old 40½ pounds of milk in one day and has subsequently equaled her dam's yield of 70 pounds, averaging 64 pounds a day for a month, and producing 6,005 pounds in five months. Imported "Dowager" has a record of 12,681½ pounds in one year.

HOLSTEIN BULL, "UNCLE TOM."—FROM LIFE.—FIG. 416.

"Uncle Tom" has never yet been beaten in the show ring, and should he ever be, we hope to be there to see, and, if it is fairly done, to give our readers a picture of the successful youngster, for he must have the advantage of comparative youth who will win in such a contest.

Our readers will doubtless be interested in the following transcript from Messrs. Smiths and Powell's accurate records of the milk yielded by their herd.

NOTES BY A STOCKMAN.

At the Fat Cattle Show in Chicago, five recently imported French Merino rams were exhibited. This is the first importation of these sheep for many years. I prognosticate repeated importations of them, and for the following reason: We are breeding too much for fineness of wool and yolk, instead of heavier carcass and large fleeces. It is a pity that as a people we refuse to look ahead. There is a story extant of a man who was once ruined by success. He once picked up a gold coin that had been lost and ever afterwards went about with his eyes bent to the ground lest he should miss another chance, and, therefore, was unable to see anything else about him. Just now there is an urgent demand for Merinos of a particular kind—fine-wooled, yolky, and wrinkled, for crossing on the common native Western and Mexican sheep. But are we to raise sheep only for crossing? There is a large demand for combing Merino wool, "de-laine wool," for mixed fabrics of wool and cotton, and for soft "all-wool" goods. This purpose should not be lost sight of in the eagerness to meet the profitable demand for breeding animals, and so exemplify the old story.

The Hereford "boom" has received a favoring gale. The first prize for slaughtered beef at the Fat Cattle Show went to a Hereford; and a second prize went to a cross-bred Hereford and Short-horn, and as the Hereford men are just now making the most "blow," the credit will be claimed for their favorite breed. Nevertheless the Hereford can well afford to stand upon its own merits as a producer of beef of fine flavor, well mixed and marbled with fat, and that yields well on to 70 per cent. of live weight on the best specimens. The Short-horns need not fear the competition, however. It is best for any breed to have an active rival, for then there is a strong inducement for it to be kept up to the highest point of excellence. Competition is the mainspring of business. The judges at Chicago did a good thing when they deprecated over-fattening. Americans have an eye to economy in their marketing, and have not yet acquired a taste for excessive fat in their meat. Prize beef will not as easily sell here as in England for double price because it is half fat; and to feed excessively fat meat is a waste of feed and good material.

The Chicago Show ended very pertinently in a pointed discussion on pleuro-pneumonia. It is a disgrace to any rational government that so serious a menace to our stock interests should be permitted to exist any longer than may be necessary to slaughter every diseased animal. This is a people's government and the people are responsible for its failures and neglects. As the country is now "saved" for four years longer, Congress may be induced to take measures to save our cattle from this imminent danger. State legislation cannot do it; it is beyond its province and its power. If stockmen, dairymen and farmers will force this subject on the consideration of their representatives,

something may be done to meet this urgent case before the coming Spri g, If every diseased animal were summarily slaughtered and its carcass disposed of in a safe manner and this method kept in force for a few months, there would be an end to the danger. In this respect, the first cost would be the least. The reflection of what would happen were this disease to become prevalent on our vast Western pastures. Is sufficiently appalling to stockmen—and farmers, too—to cause an intense interest in checking it while check is possible. Let every one interested not wait for committees to "resolute," or inspectors to inspect, but let every one write to his representative insisting on immediate action by Congress, which has already three bills before it for consideration. Every dairyman, farmer and breeder, from the Atlantic to the Pacific and from Canada to the Gulf, is deeply interested in averting this constant danger.

By-and-by there will be an outcry for more wool; "much cry and little wool," in fact literally, of the long, fine, pure Merino kind; and then those who have kept this grade of sheep will find their reward. But the shepherd who really knows his business and will look ahead should buy none but this kind of Merino f. r crossing on his low-grade natives. And these are precisely the kind that are kept pure in France in the Rambouillet flock, from which the above-mentioned importation was made.

Persistence is a valuable quality. In breeding it is all-important, and there is no more conspicuous and successful instance of persistence in a line of breeding than in this same Rambouillet flock of Merinos. Begun in 1786, with about 300 sheep, it was bred to improve in size and weight upon the Spanish Merino. In 1846 an importation was made into Connecticut of ewes weighing 150 to 200 pounds and rams from 200 to 300. Such sheep have both wool and mutton, precisely what we want; they have size, wool free from excessive yolk and grease, and that scours with less loss than that of the Spanish or Silesian Merinos; and the skin is more folded than wrinkled. While these may not be so desirable for crossing on the dry, harsh, and coarse-wooled native sheep, yet they are precisely the type towards which our Merinos were approaching when the demand from breeders on the Western plains began to bring about a fresh boom for excessively yolky and fine-wooled sheep. But having found the treasure by this accident, let us not spend all our energies in looking for more of the same kind, when others are lying around loose in other directions.

Rural Architecture.

ABOUT ICE-HOUSES.

Much has been published about ice-houses for farm and family purposes, and a great deal of money has been expended in constructing them, without satisfactory results. Let me, therefore, give readers of the Rural a description of mine and its management. Built at a moderate outlay, it has been in use 10 seasons during which it has required only trifling repairs, has kept the ice in excellent condition from season to season, and is yet as good as ever before. No "filling" or "packing" is used. In a place near the barnyard on a sandy loam with gravelly subsoil, I dug a space 14 feet square and three feet deep, leveling the bottom and throwing the soil outside. In this I placed a frame of the same size, of 3 by 6, scantling 16 feet high, substantially braced and tightly covered inside and out with ⅞-inch tongued and grooved white pine of good quality. I then banked the soil all around it about two feet high. Around this casing, at a distance of about eight inches, I made another frame six inches higher than the inclosure, and boarded it up also closely with good stuff, beginning about one foot above the embankment. On this outside frame, strongly attached to the inner one without much obstructing the air chamber, rests the shingle roof with a steep pitch, extending three feet over the eaves and sides. Near the points of the roof is a sash, C, Fig. 417 two by three feet, with slats pitched 50 deg. and on the inside end a strip one inch high, as shown at D, to make the passage of snow or rain impossible.

A is a side view; B an air-chamber; E, Fig. 418, gives the inside space; F is the entrance on the east side in a shed K. Under the same roof at the gable end, L, is a sash like C on the west end. The entrance F is closed by one-inch boards, fitting nicely in a slide and on the outside by three doors—H, of the same stuff, about three by four feet and the bottom I, is closed like the walls. The division M in the shed goes only to the base of the roof. Now you will observe that there is a free and copious passage of air all around the inner casing, going up under the roof through the six-inch space over the same, and any heated air or evaporation is carried off by the open space above the ice, the open shed, and ventilators in the eaves. For drainage I put an even layer of corn-stalks, about two feet deep, on the bottom, and on this the ice is laid.

The ice, when even only six inches thick, is cut as nearly as possible in square blocks of 12 by 18 inches, and placed close to the inner boards, and any crevices are filled with small pieces. On every other layer clean water is poured through a fine rose, and the filling is continued in this manner up to about 18 inches from the top of the inner wall, making in a few days afterwards a solid block of ice. The upper doors are kept open after sunset until about eight A.M. every cold day, and it is only after the chances of freezing weather are over that all doors are shut and about a foot of rye straw is placed on the top of the ice.

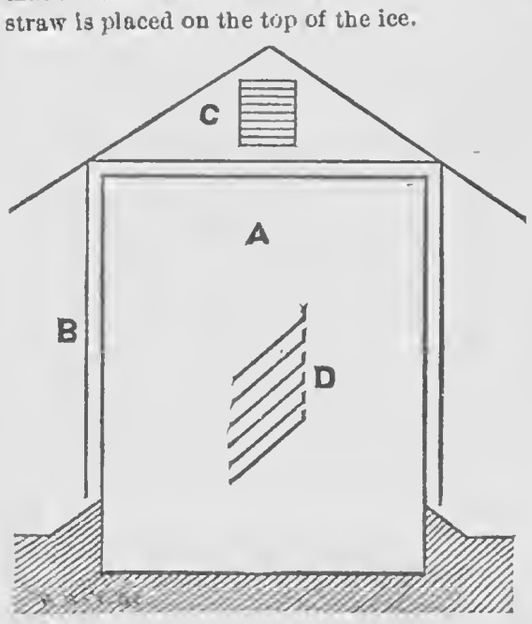

FIG. 417.

Should natural drainage not be practicable, make a clay or cement floor with a good fall to one corner; connect a small drain pipe about 2½ inches, with this corner: lead it about 15 feet, with fair descent from the house, into a suitable hole filled with coble-stones, and cover the pit two feet with soil. If corn-stalks are not on hand, straw, hay (salt), or any similar substance will answer. It is also very useful, before putting in a new crop of ice, to remove all old substance used for drainage. Keep all doors and slides open, and put the new drainage material in shortly before filling.

Passaic Co., N. J. WM. F. HEINS.

Dairy Husbandry.

THE DAIRY COW—NO. 18.

HENRY STEWART.

Trouble with Milk.

Frequent trouble may occur in milking, from very insignificant causes. A dairy cow is a machine, and just as a machine of any kind may work smoothly and beautifully in the hands of an expert, while it may go wrong in the most contrary manner when run by an unskillful person, so a cow in the hands of a capable dairyman goes on day after day steadily without the least trouble; but under the care, or rather want of care, of one who is not expert in managing her, she will always be ailing; her milk will sometimes fall off suddenly; sometimes it may be mixed with blood; sometimes it will be ropy; it may yield bitter cream, or speeky butter, and in other ways it may trouble and annoy the owner. The principal troubles with milk are, loss of quantity, ropiness, mixture with blood, a bitter flavor, foaming in the churn, difficulty of churning and white specks in the butter. Most of these come from without the cow and are avoidable. nodules and swellings about the udder, the joints and the head. The milk of such cows is usually thin, bluish in color and frequently mixed with strings of ropy or tenacious fibrous matter which comes from the teats without any other appearance of disorder, and may not be detected in the milk until this comes to be strained. But healthy cows need never cause any trouble in regard to the milk if they are properly cared for. If anything is wrong, the cause may always be found in the manner in which the cow is treated—either the food is suddenly changed; or it is deficient in quantity or quality; or it is not rightly prepared; or the cow's health is suffering from some accidental cause, as exposure to heat or cold, or storms, or some sudden change which interferes with the circulatory system; or she has been chased by dogs, or roughly handled by her companions or her keeper. Something that might have been avoided has happened to produce the trouble.

For instance, when the milk falls off in quantity, the first thing to suspect is something in the feeding or the watering. A cow will often fall off in milk when changed from dry feed in the Spring, too suddenly or abruptly, on to grass. The grass acts upon the bowels as a laxative and diuretic and, in stimulating other organs, interferes with the secretion of milk, by changing the currents of the circulation. It may not follow that a change from moderately good to more stimulating food will always produce an increase in the milk; if too suddenly made, the change may easily reduce the flow of milk for a time. In the same way the increased feeding will often so stimulate the milk organs as to cause them to pass blood into the milk ducts unchanged, instead of elaborating it into milk, and then the milk is mixed with blood. This result also may occur from any undue excitement of the circulation of the udder, such as excessive exercise in running; or from bruising or pressure when a cow lies upon a well-filled udder, or from contact of the udder with damp or wet ground at any time, or with a cold floor in the Winter.

The careful owner of a cow should always consider that the udder is a highly nervous and vascular organ, provided with a very finely diffused circulatory and secretive apparatus, and that a slight injury may have a very serious effect upon it. It is most probable that the cell structure of the milk glands is itself the source from which the milk is derived, and that these cells are replenished from the arterial blood conveyed to and distributed through the udder. When, therefore, it is considered that in a cow giving 30 pounds of milk in 24 hours, all this quantity is actually produced by the two-fold change of blood into cells and of cells into milk and cream, the activity of the organ which performs this enormous work must be, indeed, wonderful; and it should not be surprising that a supposed insignificant circumstance may produce some unexpected and serious results. Bearing this in mind, one who keeps a cow should ever be watchful and cautious against the least variation of treatment that may so easily affect the condition of the milk.

Ropy, bitter, or acid milk, the latter producing specks of curd in the butter, may be and are usually, caused by ill health in the cow, by which the condition of the blood is affected. The milk in its normal, healthful condition is slightly alkaline; but when the blood is out of condition its alkallnity may be much increased, or the milk may be acid. In one case only, however, have I found ropy milk excessively alkaline; in every other case in which I have tested such milk, it has been distinctly

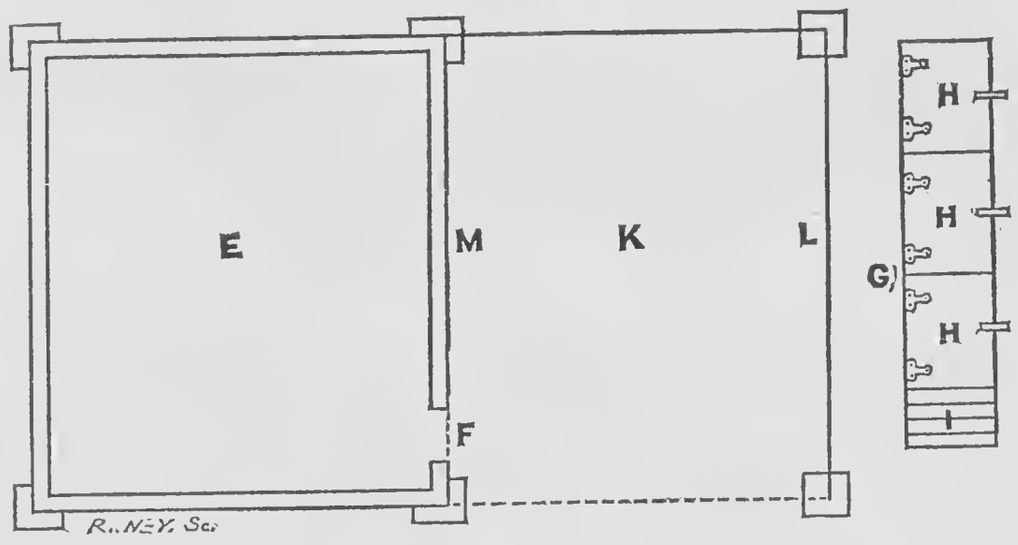

FIG. 418.

A cow may be constitutionally delicate and more subject to ailments than another more robust, and if she is very defective in this respect, she is poor property and should be got rid of as soon as possible. There are some cows that are constitutionally scrofulous and naturally subject to tuberculosis and other similar diseases, such as softening of the bones and suppuration of the milk glands. Cows so diseased are easily distinguished by their thin, white skin, the bloodless appearance of the membranes of the eyes, and the occurrence of acid and has sometimes showed, by the test of litmus paper, a high degree of acidity and has become very soon completely curdled; the long, fibrous clots placed under the microscope, appear simply as curd formed in the ducts and molded by them into the stringy pieces which pass through the teat into the milk. This ropy or stringy matter is easily dissolved in a solution of carbonate of soda or potash, and would therefore seem to be caused by acidity. The white specks which often appear in the butter are due to a similar cause, and are merely particles of curd or cheesy matter which are formed in the milk and adhere to the cream and are carried up, and mingled with it, and so go with it into the churn. In this case they are only partially removed by the most careful washing, and the butter is unavoidably injured by them.

The best remedy for all these troubles with the milk is to administer a free dose of salts, one pound of sulphate of soda (Glauber salts) or of sulphate of magnesia (Epsom salts), being given dissolved in warm water, by means of a common drenching horn; and after this has operated, a daily dose of one ounce of hyposulphite of soda may be given with benefit, for two weeks, so as to effectually free the system from all acidity. This salt is a most valuable medicine in the dairy on account of its antiseptic and alterative properties, and a pound or two of it may be beneficially kept for use. It is readily taken when powered and sprinkled over a mess of scalded bran or some cut feed, and it will be found useful in all these cases of trouble with milk. The improper behavior of milk in the churn is due altogether to the after management of the milk and requires special consideration.

A famous cow is "Eurotas 2,454;" that is, if we are to believe her report. One may believe a good deal about Jersey cows because as butter makers they are a phenomenal race. But as regards this cow, the report tells a good deal about "the development of udder, milk veins, and apparatus for the conversion of food into milk," etc., etc, which tends to throw some suspicion upon it. Because, as regards milk, the cow's yield is only equal to 10 quarts a day (22 lbs.), quite a moderate one, and surpassed by thousands of cows, and for it no wonderful development of udder, veins, etc. is necessary. But as regards the amount of butter in the milk, the report is amazing. This is over 10 per cent. or one pound to 9 67 pounds of milk. As two pounds of solid cream make but one pound of butter, this is equivalent to 21 per cent. of solid cream, or, one inch in thickness upon 4½ inches of milk. Before one should pay $1,500 for a calf from a cow with such a phenomenal record, it would be at least safe to know that the record is genuine and free, not only from fraud, but also from too enthusiastic figuring. S.

Farm Economy.

AGRICULTURAL SUGGESTIONS.

RICHARD GOODMAN.

Ground Bone.—I look upon this as the best substitute for barnyard manure for a grass farm, taking price as an essential part of the consideration. Twenty years ago I brought up a worn-out farm with it, using then the raw bone, costing about $50 a ton, ground up in pieces varying from a quarter of an inch to almost dust. The latter showed good effects the first season, and the other dissolved gradually and left an impression annually for five or six seasons. I now use for seeding down a pasture or meadow the bone dust of Peter Cooper's glue factory—coarser or second quality—sowing it in the Spring, at the rate of 500 pounds to the acre, and harrowing it in with the seed, and top-dressing lightly every Fall a few years thereafter—say 200 pounds to the acre. I purchased through Mr. L. J. Hand, 130 Water Street, New York. At the New Jersey Experimental Station, where seven specimens were subjected to scientific analysis, the *fine* bone-dust manufactured at Cooper's glue factory was estimated at $42 25 per ton for agricultural purposes, the actual cost being $28. I find the next lower grade, called "coarser," just as good for all purposes, and it costs about $3 a ton less.

Ensilage for Butter-Makers.—There is probably no question of the utility and economy of this preparation of food for beef cattle, and perhaps for cows whose product is solely to be used as milk, but how far it will be beneficial to those who convert the latter material into butter is questionable. Accounts of the opening of several silos recently, show that on the surface of the mass there was quite a must or mold, and in some cases more fermentation than a good dairyman would like to have in the food his kine swallow. This ought not to affect the milk perceptibly, but after the latter has stood the usual time, and its essence has become cream, that and the butter would be likely to become affected, at least in the tempering of that delicacy of flavor which is the chief charm of gilt-edged butter. We have not yet been able, by means of any of the recent portable creameries, to obtain that nutty, delicate flavor in the butter which is imparted by the old-fashioned method of setting in open pans in a proper temperature, in a room uncontaminated with any other flavors. Conversing recently with an experienced dairyman, who is now managing a large establishment furnishing milk in sealed cans, he informed me that it

was not unusual for customers to complain of the ill effects of the milk upon children, and, tracing the cause back, he generally located the difficulty at some farm where the cows were fed largely on apples or had some other improper food. There is no donbt all cows will eat with avidity the contents of the silos and, like us humans, prefer a mixed, moist diet to a dry one of hay and bran; but it is yet to be proved whether, for all dairy purposes, the lacteal fluid and the cream and butter will be as good and fine for the delectation of discriminating epicures, as the same products produced from the usual fodder, early-cut hay, wheat-bran and corn-meal. There is another consideration apt to be overlooked by the enthusiast and new beginner, embodied in the homely proverb, "You can't get more of a cat than her skin and what's inside of her." No more food will come out of the silo than is put in. There are some chemical changes, of course, but probably the most efficacious of the results is the softening of the corn butts and the other hard substances by the vinous fermentation, so that the animals can eat and digest everything; but was not that result reached as effectually by the steaming process so much in vogue a few years since and now practiced in a limited degree? Great credit is due to those enterprising farmers—and they are increasing daily—who will experiment and test for the benefit of themselves and others, and it is wise to let those who have the means and the knowledge satisfy themselves and give the results of their work before too many, without due preparation, rush in and get disappointed and perhaps deter others from having a good thing.

WATER.—Water is now what is wanted in New England, on the farm and in the villages as well as in the manufacturing establishments, and the dairymen especially cry for it almost as zealously as did the thirsty rich man to Lazarus. The Winter has closed in upon us without the usual Fall rains; the Summer has been almost a continuous drought; the wells are dry, cisterns only partially filled, and the springs closed up. It looks as if our farm hands and horses will be occupied all the Winter in drawing water from the brooks and rivers for the cattle, and the latter will have to run great risks in going to those streams sufficiently near, on the ice and snow.

Among all the devices to surmount the difficulty attending this condition of things, the most feasible appears to be deepening the dried-up wells by *boring* or *driving* new wells in soils suitable to this purpose. There are several machines invented for *boring* to any depth, now coming into use here and at the West, and they bore through rock as well as earth, until water is reached. Then iron pipes screwed together are inserted, a force pump applied and the supply is unfailing. *Green's "driven wells"* have been seen at almost all the country fairs, and are familiar to the farming community. One great advantage of this system of reaching water, next to the supply obtained at all seasons, is that the water is free from all surface impurity, as nothing can leak in through these iron pipes, and the well can be near the barnyard without injury. When an old well is deepened, the water reached and the pipes inserted, the well is filled up around them with clay and earth. The cost of *boring* is usually $5 to $6 per foot through rock, and the cost of piping, about $1 per foot, is to be added; through earth alone about $3 per foot, and where cement instead of iron pipes is used the cost is two-thirds less than iron, but the joints are not so close, and if the well is near a barnyard it might not be safe from intrusion of the flow from it in wet seasons. We are not as clean as the Persians, according to Herodotus, were—"who never spat or washed their hands in a river, nor allowed anyone to do so," and for pure water for house or barns there seems no better way for those aloof from mountain springs to obtain it than by delving into the bowels of the earth, which are supposed to be clean, and if we don't go near enough to the hot regions below, we shall get a good article and plenty of it. A wind-mill can be used instead of a force pump, when required, and the water thereby constantly distributed to the tank of the dwelling-house and barns, and from the latter into the mangers of the cattle.

How to Feed the Pigs.

A good plan for a pig trough is here illustrated. It is so constructed that without trouble

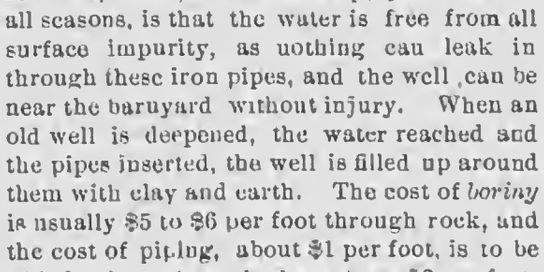

FIG. 419.

or delay, the swine can be shut away from it while the feed is being put in. T is the trough, divided by cross strips to prevent the swine from crowding one another. D is a door hung over the center of the trough. When it is desired to shut the swine away from the trough, the door is swung in and bolted (B) on the side of the trough. After the feed is evenly distributed, the door is swung to the ontside of the trough, and bolted.

Entomological.

THE GRAPE-VINE FLEA BEETLE.

This little insect, a small blue or brown jumping beetle, less than one-fifth of an inch in length and which is shown, much magnified, in the two illustrations, figures 420 and 421, has the scientific name of Haltica chalybea, of Illiger, and is of the order Coleoptera, and family of Chrysomeladæ. It is found eating into the grape buds in early Spring.

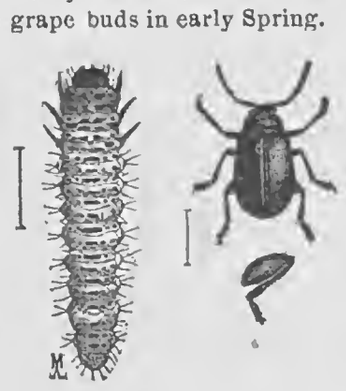

FIG. 420.

In May and June the brown, sluggish larvæ are found upon the upper surface of the leaves, eating irregular holes and often partially or wholly skeletonizing the leaf.

A sketch of the natural history of the flea beetle is given by Prof. Comstock in the forthcoming report of the Department of Agriculture, from which we are permitted to reproduce the accompanying illustrations for the RURAL.

The greatest damage which is done by this flea beetle, so called from its jumping habit, is in eating the young vine buds in early Spring. The adult beetles hibernate in great numbers in the Fall under the bark or the

FIG. 421.

splinters of supporting posts, or on the lower portion of the grape-vines, in the joints of fences, or under sticks, stones or logs, and, in fact, in any convenient place where they can find promising protection. During the first warm, sunny days of Spring, as the buds of the vine are beginning to swell, the beetle leaves its winter-quarters and flies, or jumps, to the nearest vine for its food. There it gnaws holes into the buds often deep enough to bury itself.

As soon as the leaves unfold, the females deposit their eggs of a straw color, in irregular clumps of four or five, upon both under and upper side of the leaves. The young larvæ hatch some time in May or early in June, according to climate, and commence to feed upon the leaf, cutting irregular holes. The larvæ attain full growth in from three to five weeks, and may be found in almost as wide a range of latitude as the grape vine itself.

Figures 420 and 421 show the size and appearance of this pest, and its habits of feeding. After feeding sufficiently the larvæ drop from the vine and work their way under the ground some two or three inches, form a smooth cavity around themselves and are transformed to pupæ, about 15–100 of an inch in length and of a yellowish-brown color. Here they remain from two to three weeks when the perfect beetle emerges, see fig. 420. A second brood may be found in the warmer latitudes, but one brood a year is all that there is any certain knowledge of.

The remedy for this insect is to use posts without bark, in the vineyard, and to make examination of the lower part of the vine or any other places, and remove any that may there be discovered, and to rake up, late in the season, and burn all refuse or rubbish in which the beetle has taken refuge. In the Spring the appearance of the beetle should be noted, and all beetles' eggs and larvæ carefully destroyed with the fingers. The beetle drops and feigns death when interrupted in feeding. Holding a strip of cotton cloth, three feet by six, saturated with kerosene, under the vine and giving this a sharp jar, will collect and destroy the beetles while beginning to eat early in the Spring. Sprinkling with a solution of whale-oil soap—two pounds to fifteen gallons of water—or dusting the leaves with lime also aids in the destruction of the pests.

The Cabbage Pionea.

In the RURAL for August 7th, I ventured the statement that there must be three broods of the Pionea worm in this latitude and possibly four or five, giving my reasons for such a conclusion. Though I have not taken the trouble to rear them since writing, I have observed them on the cabbages in my garden since then, and my observations fully confirm the conjecture I made at that time—that there are at least four broods. While it is quite probable that the more rapidly developing specimens may run through five broods in a season under favorable circumstances, and the slowest developing only through three, the average number will produce four broods, according to their appearance in my garden.

At times I have seen the Pionea and rape worms on the same head, but they are generally found on separate heads. The rape worms, by the way, are much less numerous this year than last, showing that the parasites on them have been present in full force. On the subject of remedies, it is probable that pyrethrium will prove the only safe one that will be sure not only for this but the rape worm. Paris-green and London-purple are effectual in killing the worms, but they are not safe, as they are liable to remain on the heads and kill the people who eat these. G. H. FRENCH, Carbondale, Ill.

Industrial Implements.

AN EXCELLENT PORTABLE MILL.

THE accompanying cut represents a very serviceable mill designed and made by the Nordyke & Marmon Co., of Indianapolis, Ind. It is of the upper-runner type, placed in an iron hurst frame. All its material, except the stones and curb, is of iron or steel, which renders it extremely durable. Every part is accurately fitted, adjusted and balanced, and thus the utmost steadiness of motion is secured. The mill runs very lightly, and the stones, being of equal thickness and in perfect running balance, no trouble arises from their action. In flouring middlings or wheat it is only necessary to keep the furrows and faces smooth and true, and to follow the usual directions for good milling. The mill has the latest improved

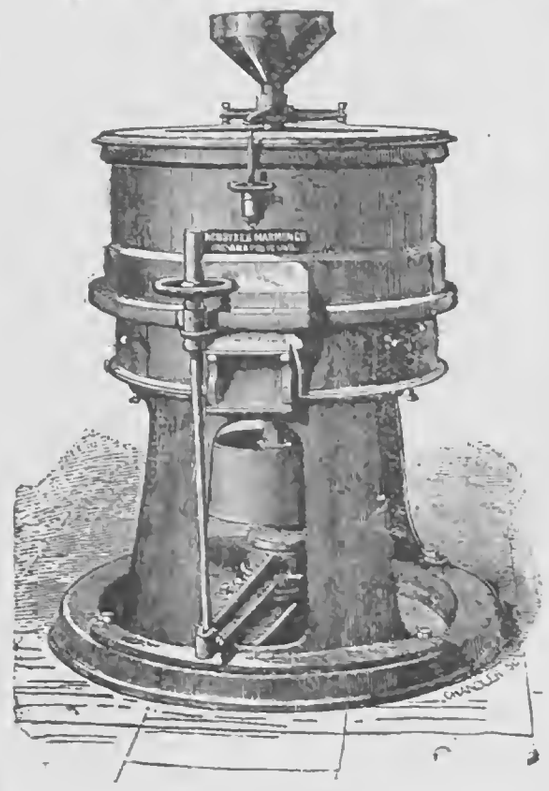

FIG. 423.

self-tramming driving iron; the bush or upper bearing of the spindle is self-adjusting; the bed-stone is movable and held firmly in its place by suitable screws, which are used for tramming and leveling it. Several sizes are made. The fact that the mills of this well-known firm were awarded the highest prize at the Missouri State Fair lately held at St. Louis, and at the recent Millers' Exposition at Cincinnati, speaks eloquently in praise of their merits. For full particulars with regard to them we refer our readers to the Company at the above address.

Miscellaneous.

NOTES.

IT seems to me that the deer may be taken in hand and bred into an animal of more general utility, and certainly there are few greater objects of beauty. Does not the deer offer a subject of as much interest as the outlandish goat for experimenting with?

There is want of a kind of meat somewhere in character between beef, and mutton and pork—not so tough and coarse as beef, and yet not so fat and indigestible as pork, and still of a better flavor than mutton, as generally found upon our tables; something larger than poultry and not as expensive, and yet more compact and meaty, yet not as heavy as beef. C. C. B.

The cry of food adulteration comes periodically round, and nearly scares the life out of all sensitive, nervous people. The coffee is half peas for body, half chiccory for strength; the sugar and sirup are half glucose or sorghum, just as though any and all of these were not perfectly wholesome. The olive oil is half lard, or cotton seed or fish or some other, as though they were not all oil, and who knows which is best? C H.

Rice is not only one of the most wholesome, but one of the most palatable cereals, when carefully cooked, and its area of cultivation is very rapidly extending. The crop in Louisiana in 1870 was but 60 000 barrels, while the present crop is estimated at 250 000 barrels. The price ranges from six to eight cents per pound at wholesale, which is three or four times more than that of wheat, but no more than flour, and there is no waste in it as in wheat. J. F. B.

EXTRACTS FROM SUBSCRIBERS' LETTERS.

I like the RURAL. It has a heart in it.
E LEWIS STURTEVANT.
So. Framingham, Mass.

I subscribe for the RURAL NEW-YORKER because it is the best agricultural paper I take, and I want it every week steadily.
Watertown, N. Y. D. S. MARVIN.

I must say the RURAL is the very best paper I ever read, and I read a good many.
New Market, Va. MRS. P. S. WISE.

The RURAL is an especially welcome visitor, week by week, helping very much to relieve the dullness and loneliness of our isolated situation. My husband esteems it very highly for the information in agriculture and horticulture it affords, and I enjoy its literary and miscellaneous contents. MRS. L. B. HALE.
Kansas.

The RURAL grows better and better. I will do all I can to add to its circulation. I hope to get a large club this Fall. Your premiums are very liberal and valuable. F. B. WEED.
Saratoga Co., N. Y.

IF the White Elephant should prove to be as good a potato as the Beauty of Hebron, it will be worth the cost of the RURAL to each subscriber, and the RURAL is worth more than any other farmer's paper that I have seen.
Oneida Co., N. Y. H. E. DAVIS.

I HOPE the RURAL is prospering as well as it appears to be, for its appearance is very inviting and successful. MARY WAGER-FISHER.
Bryn Mawr, Pa.

[It is safe in this instance to judge by appearances.—EDS]

I LOVE the RURAL. I have learnt something about fruit growing every week since last January, when I had my first number. It has made me an enthusiast about grapes, raspberries, strawberries. H. KENWORTHY.
Iroquois Co., Ill.

I HAVE taken the RURAL since Jan. 1, 1880, and like it very much.
MRS. ELIZABETH A. BRIGDEN.
Van Ettenville, N. Y.

THIS morning I *take* time to answer your letter. It is your fault that I am so hurried. My advertisement in the RURAL NEW-YORKER tells almost too well. J. T. LOVETT.
Monmouth Nursery, Little Silver, N. J.

WE think the RURAL is a splendid paper.
Hartwick, N. Y. G. W. SILL.

I WAS so well pleased with the seeds you sent

me last Spring that I will take pains to get new subscribers and renew. W. C. BELDING.
Swanzey, N. H.

THE RURAL is the only agrienltural paper I read. In the busy season I seldom read even N. Y. Daily, but the RURAL is an enjoyment I do not forego. GEO. S. JOSSELYN.
Fredonia, N. Y.

WOULD that more of our non-reading planters and farmers could see and take the RURAL NEW-YORKER. Through your paper we have received many large orders for what we have sold. W. B. JONES, M. D.
Herndon, Ga.

WE are very much pleased with the RURAL and RURAL seeds; the only query is how can you raise so large a crop.
Livingston Co., Mich. MRS. HENRY CROOP.

I AM told that the RURAL NEW-YORKER is the best weekly agrienltural paper in the world, but as I never see it, I cannot speak from personal knowledge. JOSEPH HARRIS.
Moreton Farm, Rochester, N. Y.

I MUST have the RURAL; it is a welcome visitor every week. It seems to get more interesting. I think it one of the most valuable papers published, and one that our children can safely read and from it learn something worth learning. I consider it one of the very best papers ever placed before a family.
Ontario County, N. Y. E. F. MANAM.

IT will give us great pleasnre to recommend the RURAL whenever we have an opportunity, because it is worthy of it. You are certainly making it a first-class paper, and we congratulate you upon your success and your bright prospects for the future. Your portrait of the Naomi Grape in last number is very tempting. What are we to do with all the new and wonderful grapes? ELLWANGER & BARRY.
Mount Hope Nurseries, Rochester, N. Y.

—— the leading agricultural paper in the United States. EX-GOV. R. W. FURNAS.
Brownville, Neb.

MY wife says the RURAL is really the best of all the agricultural papers I get, and I assure you I think so, too. I am still Secretary of the Board of Trade here, and Secretary of the Northwestern Dairymen's Association.
Elgtu, Ill. R. P. MCCLINCY.

RURAL BRIEFLETS.

WE once asked a nurseryman why he gave so much of his grounds to the Balsam Fir or Balm of Gilead, as it is often called. "Because," said he, "of all trees in my nursery, that is chosen first by nine out of every ten that come to purchase." No doubt a careful estimate of the different kinds of evergreen trees to be seen about country and even city homes as well as public parks and cemeteries, would show that the above experience is the rule and not the exception among nurserymen in general. Young Balsam Firs are very captivating. They look to be the embodiment of health and vigor. Their leaves are of the greenest and they never present the faded hue that those of the spruces and arbor-vitæs beside them, during a considerable part of the year, assume. But this freshness of youth is really their only charm. As they grow older they become less compact. There is more of stem and twig and less of foliage, and, finally, at an early maturity the lower branches, as if attacked by some disease, begin to decay and the tree, at a time when it should serve us best, has lost both symmetry and beauty of foliage and is only permitted to remain because we cannot afford to wait another ten years for the growth of a better tree to fill its place. . . . . .

THERE is now in England a variegated form of the Virginia Creeper. The leaves are splashed with yellow and the variegation does not impair the vigor of the species. There is also a variegated tulip described in the Garden as golden-margined. But the variegation is not constant, solid green leaves occurring here and there. . . . . .

Mr. HOVEY, in some thoughtful and entertaining notes to the London Garden, speaking in opposition to the prevalent fondness for creating double flowers, says:

"I think Lindley once raided upon cultivators for their attempts to spoil some of our prettiest flowers by making them double; and though I cannot agree with this as a rule, I do think that nature has placed in our hands some few flowers which it would be as great a mistake to improve upon as it would be to make a double-headed horse."

The beauty of many flowers has been enhanced by the change from a single row to many rows of petals as, for example, pelargoniums, balsams, portulacas, roses, camellias, petunias and asters. But there are many others which are far prettier with single flowers, as, for instance, the Rose of Sharon or Shrubby Hibiscus, the violet, lilies of all kinds, the gladiolus, tulip, hyacinth, mock-orange, lilac, clematis and many others . . .

SEVERAL years ago we spoke of having seen several spikes of blue (light blue) gladiolus which were exhibited in the show room of one of our city seedsmen. This announcement was received with some incredulity by several of the English horticultural journals. Little has been heard of them since and upon inquiry the reason seems to be that the corms are not very vigorous, rarely more than reproducing themselves and never forming bulblets. Unless, therefore, a more rugged blue variety should again be grown from seeds, it must be a long time before a blue gladiolus can be offered for sale. . . . . .

THE editor and assistant editor of the American Entomologist have dissolved that relationship. The interests of the latter, it appears, are liable to call him at any time to New Mexico. For the same reason we hope it may not necessitate his retirement from the agricultural editorship of the N. Y. Sun. . . . . .

IT has been suggested to Sarah Bernhardt—and the advice is just as good to all thin people—that if she wants to get fat she should board at restaurants or second-class hotels and help herself freely to the butter! A question may arise whether *first* class hotels would not answer. . . . . .

PUCK says that it is the impulsive pullet that very, O vary often does the heavy work for the farmer's basket. The thoughtful, brooding old hen may cackle-late, but she doesn't lay early and often. . . . . .

IT appears that the wheelbarrow is now called the *unicycle*. But the Boston Post thinks that it is just as hard to run with a big trunk on it as it was under the old name. . . . . .

WE have received a letter from an esteemed correspondent, who has often placed us under obligation by the freedom and sincerity of his criticisms, in which we find the following:

You ask for something *new* and valuable upon the subject of corn growing. Corn has been grown in America since 1492, to our knowledge, and long enough previously to shrond its origin in an impenetrable cloud of mystery. How can there be anything *new* upon that subject? I think, before we tell the farmers anything more about its cultivation, we should teach them the commonest principles of plant growth in general. I don't think you know how many farmers read agricultural journals out of mere curiosity, to see what you say, without the smallest idea of practising your precepts, or taking the least pains to understand them. Your contributor, Mr. Stewart, is on the right track, but although he is perfectly well posted on the subject, he doesn't know how to handle it. He is altogether too abstruse for children, and, in fact, even for three-fourths of the farming community of adults. He is not the first writer by any means who knows all about his subject, but who has not the faculty of communicating his ideas clearly and concisely. Often the best professors are the poorest teachers; they have the knowledge, but it hangs fire, it is bottled up and the cork wired down. . . . . .

MR. SAMUEL L. BOARDMAN was for 16 years editor of the Maine Farmer, six years Secretary of the Maine Board of Agriculture, and recently agricultural editor of the American Cultivator. He is now the editor and one of the proprietors of a new paper called The Home Farm published at Augusta, Maine. Mr. Boardman is well known as an able agricultural writer, and we hope that his work may meet with a hearty response from the farmers of Maine, who it seems to us, stand in much need of a live, liberal-spirited farm journal. . .

OUR friend and valued contributor, Mrs. Annie L. Jack of Canada, asks us the following question:

"What percentage of split beans, broken in thrashing, will be likely to grow?" Can any of our readers answer? We cannot. . . .

WHAT OTHERS SAY.

MR. HYDE remarks in the New York Times, that if one wishes to cultivate his farm like a market garden, it may pay to plow in the coarse manure and harrow in the fine, but as a rule he would recommend the application of the manure to the surface of the soil. This is nature's method, and is the most successful for common practice.

"IF you want to enjoy a green old age," says the New York Herald, "live on your income while you are young. A debt is like a drizzling rain, which makes you uncomfortable all the time, while bills all receipted and a lucky penny laid up for bad weather make the heart warm when the mercury is at zero."

MR. J. S. WOODWARD discourses in a late New York Tribune upon the care of stock during Winter. He thinks that any man who lets his cattle stand shivering in the lee of a straw-stack, or old fence, or under an open shed, should be tied in the same place and be compelled to stay one night with the thermometer at zero and the snow flying thick and fast about him; if this does not convince him of the necessity of good warm stables, he is not fit to be called by the noble name of farmer, and the quicker he gets out of the business the better for it and himself.

MR. WOODWARD thinks that the subject of *ventilation* is as little understood for stables as for dwellings. He says that it is next to impossible to open windows or ventilators at the sides of the stable without some animal taking cold or suffering from a draft. Another fact we should remember: every day we keep a young animal with no growth, and every day a mature animal is allowed to get poorer, we are keeping them at a loss and can't afford it; we should see to it that they are so well cared for and fed that they are constantly thriving, and to this end we should feed plenty of good nutritious feed and plenty of some sort of roots or other green food. But above all things keep them *warm*.

IMPROVING COFFEE.—It is rarely the case that adulterating material improves the article adulterated. The Grocer remarks that the stimulating properties of coffee, while they make it a popular article of consumption, are unfortunately the sources of a multitude of nervous diseases. Consequently it was found necessary, after many years' experience of its baneful effects when used in its full strength, to discover some means of ameliorating these by the admixture of a harmless substance resembling coffee in flavor as nearly as possible. An article was finally selected for this purpose after careful experiment, which is now extensively employed, not only for diluting and partially counteracting the injurious qualities of coffee, but for imparting a more agreeable flavor to many brands which would otherwise be unpalatable by reason of their sharpness and generally unpleasant taste. It is hardly necessary to say that this indispensable requisite in the preparation of coffee is chicory, a simple, harmless vegetable substance, which materially lessens not only the bad qualities, but also the high cost of an unmixed coffee. It is stronger than pure coffee and gives a good color to the decoction. It is used largely at European hospitals on account of its superior qualities of nutrition and total absence of nerve-stimulating agents. The nutritious matter in chicory, according to analysis, amounts to 66 per cent., while that of coffee is but 31.

MR. EDMUND HATHAWAY, says in a forcible and touching essay on the treatment of animals: "The effect of the barbarous treatment of inferior creatures on the minds of those who practice it is still more deplorable than its effects upon the animals themselves. The man who kicks dumb brutes kicks brutality into his own heart. He who can see the wishful, imploring eyes of half-starved creatures without making earnest effort to relieve them, and feeling a twinge of conscience, is on the road to lose his manhood, if he has not already lost it. And the boy who delights in torturing frogs or insects or despoiling birds' nests, or dogging cattle and hogs wantonly and cruelly, will generally prove a worthless creature, or worse than worthless, when grown up."

LIGURIAN HONEY BEES.—A year or two since many of our apiarians were quite enthusiastic in regard to the merits of the Ligurian honey bees, as it was claimed that they were more industrious than either the common bee or the Italians; but it seems that the Ligurians have some faults as well as other varieties. A Mr. Watts, who has recently issued a revised edition of Mr. Taylor's book upon the apiary, says that if the Ligurians gather more honey than the common bees, it is because they do it by robbing the hives of the latter. This is certainly a serious charge against the new favorites, and it would be well, remarks the New York Sun, for apiarians to investigate the matter thoroughly before introducing them in any considerable numbers.

THE Detroit Free Press says that the papers of France are rejoicing about the excellent prospect of there being lots of champagne this season, because the grape crop is good, just as if there was any connection between plenty of grapes and plenty of champagne. In America chemical science has reached such a state of perfection that it really makes very little difference, as far as wine is concerned, whether grapes are plenty or not.

THERE are certain bits of advice that can scarcely be repeated too often. We find the following in the New York Herald: Nothing is more important for a young man than to stand well with his employer, and there is no better general rule than this, to do every task with a thoroughness and faithfulness which make criticism impossible and excite admiration.

FROM 1857 to 1878, says Mr. C. M. Hovey, writing to the London Garden, there was not a single failure of the pear crop. But in 1878, from some cause, there was a great failure; not more than one-sixth of a crop. It was not owing to any severity of the Winter, for it was a mild one; and the cause has been generally attributed to the three years of continuous heavy crops, which had tasked the trees beyond endurance. From a record which he has kept he finds that the average price of pears in 1870 was about $3.50 per bushel; in 1875 about $2.75; and in 1879 about $1.35—that is, for choice, selected fruit, gathered from an average of 150 varieties, including such fine sorts as Beurré Superfin, Hardy, Doyenné du Comice, Beurré Clairgeau, B. Giffard, B. Langelier, etc.

AN amateur neighbor, remarks Mr. Hovey in another part of the same article, whose garden of about half an acre is directly across the street, and planted with pear trees, often inquires about the new pears and their value in the market, hinting occasionally at our enthusiasm for the new sorts while he sticks to the old. His trees are all Bartlett and Seckel, and for years he has disposed of his whole crop to one dealer, who takes them away without any other labor than that of gathering the fruit, and at almost double the price of Mr. Hovey's 200 varieties of all the finest pears. Having as long ago as 1868 obtained all the information he wanted in regard to these kinds, Mr. Hovey began to graft them over with Bartlett, Beurré Bosc, Dana's Hovey, and Beurré d'Anjou; and he really feels relieved in the pear season that he has no longer to see time wasted in gathering such a motley lot of unsalable pears, to set aside the disappointment when he had expected something near the description, to find it comparatively inferior.

AMONG new pears Dana's Hovey holds a prominent position. A counterpart of the Seckel, from which it was probably raised, it has held its high price for ten years firmer than any other new pear. Mr. Hovey thinks that, whatever catalogues may show, as compared with twenty-five years ago, the new pears are not superseding the old, but are rather supplementing them in the most satisfactory way.

THE DOUBLE HORSE CHESTNUT.—Speaking of this in another article of the same journal, Mr. Hovey, whose residence is Boston, Mass., says that he has two very fine trees of it, some 40 feet high, and 15 inches in diameter, which were selected during a visit to England in 1844, with many other, at that period new and rare trees. They flower abundantly, and the huge heads of double blossoms are scarcely surpassed, if equaled, by those of any garden shrub. If the blooms were upon a bush no larger than the Hydrangea paniculata, they would be almost as attractive, and he is not sure they would not vie with those of that plant; unfortunately, they are so fugitive that their beauty is soon gone—the only drawback to its more extensive cultivation.

BUTTER TEST OF JERSEY COW, EUROTAS.—The accompanying table of the butter record of this remarkable cow, the property of Mr. A. B. Darling, near Ramsey, N. J., is given by the New York Herald.

Eurotas, 2,454. Dropped calf Oct. 31, 1879, has calved again Nov. 4, 1880. The intervening test for butter commenced with Nov. 10, 1879, and ended with Oct. 15, 1880 (period, eleven months and six days), at which time she became dry:

Month 1879.	No. of days.	Weight of milk	Weight of butter. lbs.	oz.
November	21	451	40	1
December	31	755	74	0
1880.				
January	31	746	79	2
February	29	667½	77	1
March	31	653½	75	6
April	30	602	68	11
May	31	770½	87	11
June	30	837	88	6
July	31	760½	80	5
August	31	704	66	7
September	30	454½	32	5
October	15	123½	8	10
Totals	341	7,525	778	01

The total yield, it will be seen, amounts to 778 pounds one ounce of butter for the year, which is the highest yield on record. The greatest previous recorded yield was that of Jersey Belle of Scituate, owned by Mr. C. O. Ellms, of Scituate, Mass., which made 705 pounds of butter in a year. In the present case no account was kept of the milk and butter made during the first ten days of her milking period, and, as her last calf was dropped a few days within a year from the date of the commencement of the test, she would be entitled to the additional time had the trial commenced five days earlier. The weights of milk and butter were taken at each milking and churning, the butter being weighed before adding the salt, but not until the buttermilk was thoroughly rinsed and worked out. In Winter she had all the hay she wanted and in addition a pail of gruel or bran and oat-meal, thin enough to drink, three times a day. When grass came to stimulate the milk-secreting organs, she was fed three quarts of corn-meal daily in two feeds, corn having previously been found to tend rapidly to flesh. In hot weather she was stabled from the midday sun, and fed green fodder while up, with the choicest pasture while turned out.

CONSUMPTION OF MILK IN THE BRITISH ISLANDS.—Our occasional contributor, Prof. Sheldon, in a late address before the Wilts and Hants Agricultural College, stated that each man, woman, and child in the United Kingdom consumes, on the average, as milk and in

cookeries, one-third of a pint per day, or 15 gallons per year. This mode of consumption disposes of 525,000,000 gallons, leaving 900,000,000 or so to be made into cheese and butter. Of this second balance it is probable that 350,000,000 gallons are devoted to cheese, and 550,000,000 to butter. In this event, some 126,000 tons of ripe cheese are produced, and 29,285 tons of butter per annum. From America and Canada about 70,000 tons of cheese per annum are imported, and from other sources, about 30,000 tons, which, together, amount to about four-fifths of the home production. Of butter, about as much is imported as is produced at home.

HEREFORDS AND SHORT-HORNS.—In discussing the comparative merits of these breeds the Mark Lane Express says that the relative usefulness of both breeds in England is no criterion whatever of their relative usefulness in this country. There are few graziers, it thinks, in England who would buy Short-horn bullocks if they could get Herefords, and yet the breed does not extend itself in that country, a pretty conclusive proof that for other purposes than beef production, they do not give satisfactory results. The agriculture of England, in its opinion, is tending more and more towards a system of breeding, rearing and feeding cattle on arable farms where the return is to be made in both milk and beef; and it is decidedly of opinion that the Short-horn will meet these conditions while the Hereford will not. But in this country, or rather in those parts of it devoted to the rearing of cattle under the system of allowing the calf to run with the dam and take all her milk—a system of grazing pure and simple—it thinks the Hereford will be the right beast in the right place. It believes that this question will be thoroughly tested, not by fanciers or fashion mongers, but by men whose single aim is to make the best possible return for their beef cattle, and it predicts an easy victory for the Herefords.

PROFITS ON TEXAS CATTLE.—The cost of keeping cattle in Texas is estimated by the Fort Worth Live Stock Journal at about $1.50 a head, or $1500 a thousand. Four men, with 12 to 16 horses, will tend a herd of 1500. The profits are as follows: Beeves, per head, cost $15; running expenses, $1.50; sell at $22, with a profit of 32 per cent. Profit on cows costing $13.50 per head; cost of keeping, $1.50, making $15. Increase of calves, 75 per cent., worth $5 per head. Net profit, 23 per cent.

DURATION OF GLANDERS.—In a late discussion before the Central Veterinary Medical Society of London, Mr. Hunting stated, as reported in the London Veterinary Journal, that the period of incubation of the disease, during which it might rest in the system without any outward symptoms being noticeable, might vary from eight days to three months. The French law is understood to be that if symptoms of glanders become manifest within 18 days after the sale of a horse, it is inferred that the animal had glanders in its system prior to its sale, and therefore the seller is responsible. According to Mr. Hunting, it is extremely difficult to determine from the manifest symptoms of the disease how long the animal has been suffering from it, and he did not believe any one could say positively that any particular horse had been glandered for one month, or any other definite period. From this opinion, however, Mr. Steele differed somewhat, maintaining that under certain conditions and with certain peculiar symptoms it is possible to fix the duration of the disease at least to within one month. Mr. H.'s assertion that the disease is due solely to contagion was not controverted.

THE HOLSTEIN CROSS.—Mr. Geo. E. Brown, the extensive cattle dealer of Illinois, writing to the National Live Stock Journal, of Chicago, says that his first impression was against a Holstein-Jersey cross, but he has seen many excellent results and not one failure from crossing pure Holstein bulls on grade Jersey cows, and he believes that for practical dairy purposes a judicious cross of this kind may be relied upon to produce uniformly good results, whether the male be pure Jersey or pure Holstein. In crossing, however, his first choice would be the pure Holstein on grade Short-horns. This cross, he says, not only insures a deep milker, but retains the size and detracts nothing from the beef value of the Short-horn. Next to the grade Short-horn he would choose the Jersey or Ayrshire, his choice being governed by the class of cow desired—a butter cow or a deep milker.

THE FUTURE OF CATTLE RAISING IN TEXAS.—In urging upon the stock raisers of the Lone Star State the importance of improving their herds, the Texas Live Stock Journal says that all stockmen already recognize that it is hard to find a good range to-day. Those who have lately moved towards Western Texas have difficulty in finding water in places where stock are not already located. However plentiful land may be, water is scarce—to be had only by building tanks or boring wells, the expenses of which scrub stock will not pay, nor can poor men meet them on land which is not their own. In districts deserted by cattle the farmer is taking up the land suitable for agriculture; sheep men, too, are taking a share, and cattle men must soon stop turning out their herds on unlimited ranges, and confine them in close quarters, and soon it will not pay to raise beeves that when three years old will not average $18 a head; because the contraction of the pastures will not allow them to be raised in large numbers, and in small bunches the price of such scrub stock will not pay for taking care of them. The only way out of the difficulty, it insists, is to improve the breed and to raise animals that give a good profit in States where they are grazed on valuable land, where every pasture is fenced, where they are fed for market, and where there are expenses unknown at present to Texas stockmen.

BUTTERINE IN DUBLIN.—For some years past large quantities of butterine have been disposed of in Dublin as pure butter. Hitherto the fraud has escaped almost unnoticed, to the great loss of dairy-farmers. Recently, however, says the London Fanciers' Gazette, the authorities, aroused to action by the Rev. Canon Bagot and other members of the Agricultural Society, have set their faces against the practice. Several of the venders of this stuff were brought before the police-magistrates by the Corporation and sanitary officials the other day, and fined in sums of £5 and £10. The certificate of Dr. Cameron, city analyst, set forth that the samples submitted to him consisted of a compound of foreign fats, instead of butter fats. In one of the cases the prosecuting official deposed that one of the cools of butter was marked butterine, but over the "ine" was placed a smaller label, marked 10d., so that the apparent marking on the cool was "butter, 10d." The magistrate said this was a very bad case of deception, and imposed a fine of £10.

CATALOGUES, ETC., RECEIVED.

THIRTY-SEVENTH Annual Report of the N. Y. Association for Improving the Condition of the Poor, for the year 1880, etc.

How Persons Afflicted with Bright's Disease Ought to Live, by Joseph F. Edwards, M. D., published by Presley Blakiston, 1012 Walnut St., Philadelphia, Pa. A neat little cloth-bound volume of 87 pages, containing a good deal of useful information for those afflicted with this disease, and their helpful friends.

RURAL SPECIAL REPORTS.

FLA., Starke, Bradford Co., Nov. 23.—We are having an unusually wet and unpleasant Fall. We had a light frost the 15th of this month, and to-day there is a very cold northeast wind; it may freeze to-night. We have prepared for a frost by covering all very tender things, but we shall risk the orange trees. Many cover their small trees, but we think it best to let them get toughened, hoping the process will be gradual enough not to hurt them. They will stand a very heavy freeze if the sap is down, as we found two years ago, when they were completely covered with ice and not hurt at all. The rains through October and November injured the cotton crop, and planters have not realized more than half a crop. The sea-island or long-staple cotton is only raised on the Sea Islands bordering on South Carolina, Georgia and in Florida from the Suwanee River to the ocean, this State, producing over half the crop, which in grade rates with the best. Short cotton is raised west of the Suwanee to the northern and western boundaries of the State. Our long-staple cotton is a fancy article sold by itself, and is made no account of in the New York market reports; it is mostly sold in Savannah, and is used in the manufacture of the best qualities of thread. It is also used to mix with silk in making ribbons and other silk goods. The fiber is so long and silky that it can be used for purposes for which the short staple would not answer. Two years ago the Willimantic Thread Company sent an agent here to buy up this cotton for their manufactory without the intervention of middlemen. It usually sells for about three times as much as the short staple. Last year the best short staple sold in Savannah for 12 cents, and the best long staple, for 36 cents, so you will see that as both kinds are raised in the State, it is necessary to make a distinction.

I. S.

N. Y., North Blenheim, Schoharie Co., Nov. 25.—In a late issue of the RURAL, the Editor asks the result obtained by raising corn on land plowed in the Fall and crossed-plowed in the Spring. I cannot give any results with regard to corn, so raised; but I can tell about a crop of oats, raised under such circumstances. Last Fall I plowed about one-third of a four-acre lot of rye stubble, and in the Spring I plowed the whole field, and the result was that the oats grew about one foot taller where it was plowed the second time than on the rest of the plot, and were the best oats by half. People who passed by the field wondered what made the difference. I am well satisfied by this and past experience that it pays to cross-plow in the Spring for any crop. The long, dry Summer shortened the hay and potato crops in this section; but corn never was better on the hills or on the Schoharie flats. Rye was a fair crop, as usual; as was wheat. As this is a dairy section farmers do not sell much grain. Prices rule about as follows: hay, $15 per ton; corn, 70c. per bush.; rye, $1.00 per bush.; potatoes, 40c. per bush; wheat, from $1.10 to $1 25; oats, 40c.; buckwheat, 50c.; dairy butter, 25 to 28 cents per pound; pork, $6 to $7 per 100 pounds. The dry weather has caused a short crop of butter this season. It is nearly all sold, and most of it has gone to market. Hops are a poor crop and are selling from 13 to 21 cents per pound. We are having some very cold weather: we have about two inches of snow, with the thermometer below zero for the last three days. The streams are all closed up and roads are fine. I am glad to learn through the columns of the RURAL that the New York Experiment Station officers are getting ready to do something. I would like to have them locate a sub-station, up in this section of Schoharie County, as we are a very poor class of farmers it would do us some good.

I. P.

MICH., Menominee, Menominee Co. Nov. 26.—This is a newly-settled country, and lumbering is the main business as yet. Most farmers are getting three crops this Winter—cedar posts, logs and cord-wood. In Summer they get a few potatoes and some garden stuff. The day is not far distant, however, when there will be some pretty large farms hereabouts, as the land when cleared of its timber is well adapted for agriculture, and there will be a good home market among the lumbermen for everything raised on the farm.

The Querist.

ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention.]

Value of Pumpkins for Milch Cows.

J. M. B., Auburn, N. Y., asks if pumpkins are of much value for milch cows?

ANS.—The pumpkin is not properly appreciated by dairymen or the general farmer. It is so easy to raise them in this land of Indian corn that the farmer ought to study their value more closely. The English farmer founds the prosperity of his agriculture upon his turnip crop, and it is generally credited with a large share of the advancement made in England during the last fifty years. Let us, then, compare the pumpkin with the turnip, and to do this properly we must look at the chemical constituents of each. Chemistry is the basis of all accurate knowledge of comparative values. Professor F. H. Storer, of the Bussey Institute, has made the most thorough chemical examination of the pumpkin, and we give his analysis in the following table, together with a German analysis:

	Water.	Albuminoids.	Crude fiber.	Carbohydrates.	Fat.	Ash.
Pumpkin (European)	89.1	0.6	3.7	6.5	0.1	1.0
" flesh (American)	93.5	0.9	0.98	3.9	0.12	0.67
" rind "	86.2	2.8	3.40	5.70	0.49	1.40
" seeds, etc. "	77.8	6.0	3.80	4.80	6.90	1.50
Turnips	91.5	1.0	0.55	5.80	0.15	0.80
Rutabagas	87.0	1.3	1.10	9.50	0.10	1.00

Here it will be seen, if you take the average of the whole pumpkin, it is equal to ordinary turnips in nutritive matter, and is scarcely inferior to the rutabaga. The seeds are very rich in muscle-forming matter and fat. They are too rich to feed in large quantity, and care should be taken to feed the whole pumpkin together. The seeds sometimes become separated, and then are eaten in too large quantity by some cows, and they are a strong diuretic and act upon the kidneys; but if fed with the whole pumpkin they will do no injury. Cows are fond of the seeds and will eat them in preference to the flesh if they find them separate. The rind is also richer than the flesh, but is not so digestible, having much more woody fiber. One most important point in favor of the pumpkin is its agreeable flavor and the good quality of milk it produces. It yields a fine-flavored butter, and is a very healthy food for cows. The pumpkin can be raised much more cheaply than the turnip. In fact, it can be raised almost without labor. We have raised from two to four tons upon an acre with corn, and without interfering with the yield of the latter. If pumpkins were raised alone on good land, probably 25 tons could easily be produced upon an acre. Every dairyman might easily raise one to two tons for each milch cow kept, and it would add materially to his income.

Miscellaneous.

I. S., Starke, Fla., incloses specimens of an insect which infest the leaves of the orange tree, and requests its name.

ANS.—This insect, which was once so destructive to Florida orange groves, presents the appearance of a minute, narrow, elongated scale, with a narrow, semi-transparent, whitish margin. It adheres closely to the leaf, and is apparently formed by successive semi-circular layers, on the margin of the leaf. It is about a tenth of an inch in length when fully grown. It is known as the Orange Scale, and belongs to the genus Coccus. If one of the scales be carefully opened, the larva, or grub, may be seen in the cavity of the shell. The head of the grub is placed toward the narrow part of the shell, and from the under part of the breast, a piercer, or thread-like filament, proceeds, by means of which the insect sucks the juices from the leaves. It is said to have first made its appearance in Florida in 1838, on some Mandarin orange trees procured in New York.

F. B P., London, Pa., inquires what to do with barren, hilly pastures, and those too rough to plow, too dry to grow grass, and too much overgrown with ferns and brush to be of service.

ANS.—This is a much-vexed question. If it will not pay to mow the brush and dig it out; if it cannot be plowed, and if too dry for grass, plant it to chestnut, or hickory, or maple, or black-walnut timber; set an apple or pear orchard upon it; pasture sheep upon it in the daytime, and give them other food at night; herd a drove of hogs upon a few acres at a time, and scatter some corn on it; make ponds which will keep the water standing on it; sow or plant almost anything upon it in order to get shade, moisture and soil. Sheep like the tops of hilly ground, and will lie on the sunny side of a wind-break of trees or a board fence or stone wall and soon enrich the soil.

F. M. B., Bucklin, Mo., asks, 1, whether little pieces of the lower roots of pæonies will ever make plants if planted in October, or is it necessary to take a whole toe; 2, the names of a few cheap gladioli that will be likely to do well there; 3, why did her double tulips blast in the bud last Spring?

ANS.—1. Probably not—we have never tried such small pieces with pæonies; but we judge from our experience with other root cuttings. 2. Charles Dickens, Eugene Scribe, John Bull, Le Poussin, Mazeppa, Meteor, Penelope, Vesta. It would be far better for our friend to send for the Spring catalogues which will be announced early in the new year, and order mixed assortments. Really fine kinds are offered for 75 cents per dozen. The chief difference is that the names have not been preserved. 3. A severe frost would have blasted them. If the bulbs were unharmed, we do not think of any other cause.

S. N., Middletown, N. Y., asks how to make use of old refuse by burning it under earth.

ANS.—Several years ago there was started a patent plan of enriching earth by burning refuse under it, called "The Poor Man's Manure." It is better to cover all kinds of refuse which must be burnt, with a layer of earth or peat as in a coal pit. It serves to retain the valuable parts of the refuse, and at the same time dries the earth or peat which is then a very valuable absorbent for house slops, or privies, or barnyard liquids.

F. L., Granville, O., asks, 1, whether D. F. Beatty, of N. J., is a reliable dealer in pianos; 2, whether the Ohio Hedge Co. have a patent for bending and tying down the hedge, as they claim.

ANS.—1. D. F. Beatty sells cheap pianos, but they are as represented; and so far as we know he is quite trustworthy. 2. We do not know anything about the Ohio Hedge Company, or about their claims for a patent.

J. W. L., Smith's Grove, Ky., asks whether apples, potatoes—sweet and Irish—turnips, etc., will keep in the same cellar without the evaporation from one injuring any of the others.

ANS.—We know of no reason why they should not, unless that "*etc.*" includes something of a nature different from that of the things mentioned.

F. M. B., Bucklin, Mo., asks for the entomological name of the five-spotted sphinx, and if the tobacco fly is a sphinx.

ANS.—The five-spotted sphinx is known as *Sphinx quinquemaculatus*. The tobacco-fly, (more properly moth) is a sphinx and the large "Green worm" often found on tobacco plants is the larva of a sphinx.

THE
Rural New-Yorker,
PUBLISHED EVERY SATURDAY.

Conducted by
ELBERT S. CARMAN.

Address
THE RURAL NEW-YORKER,
No. 34 PARK ROW, NEW YORK.

SATURDAY, DEC. 11, 1880.

OUR readers who desire them would greatly oblige us if they would send for *specimen copies* to the journals with which we club. We can not furnish specimens of those journals. When our readers desire to SUBSCRIBE for any of them, in connection with the RURAL NEW-YORKER, we shall be happy to forward the subscriptions with all promptness. The publishers of those papers agree to send specimen copies to *Rural subscribers without charge.* The combination prices are probably the lowest ever before offered. Each paper is offered at its lowest *club* price. Address, therefore, for specimens, The Weekly Inter-Ocean, Chicago, Ills.; Weekly Detroit Free Press, Detroit, Mich.; Weekly Globe-Democrat, St. Louis; Weekly New York World, New York, N. Y.; Weekly Pioneer Press, St. Paul, Minn.; Weekly Evening Post, New York, N. Y.

FROM the tests made by the RURAL as well as from other tests since carefully made, it may now be set down as a fact that the germinating power of weevil-eaten peas is, that under the most favorable circumstances as high as 25 per cent. may be made to grow—but that under ordinary conditions less than 12 per cent. will grow. That is to say—about 88 per cent. of weevil-eaten peas are worthless.

WHEN there is no number upon subscribers' papers, the subscription term expires with the year. Please look under the heading "RURAL NEW-YORKER." No. 50. shows the numbers that have been issued *this* year—two more will complete the year. The number underneath is the *whole* number issued of this journal, and it is this series of numbers which shows subscribers when their time expires. For instance, those papers which are numbered 1,611 on the outside, end with this number. If the number were 1,615 on the outside of the paper or wrapper, the subscription would end one month, or four numbers, hence. If now we receive a yearly subscription, 52 numbers are added to 1,611 (the present number) making 1,663. When our whole number reaches 1,663, that subscription expires. This is very plain to most of our readers. Our apology for the above explanation is that it does not seem to be plain to all.

THE RURAL NEW-YORKER DOES NOT SELL SEEDS OR PLANTS.

NEVER in our experience has any topic the RURAL has ever treated excited so much interest—so many inquiries—as the Chester and Blount's corn. This is due, no doubt, to our large yields at the Rural Farm, produced, as they were, at less than the usual cost of good corn crops in general. As if the majority of our readers were not aware that we never *sell* to subscribers any of the seeds or plants which we raise, hundreds have asked at what price we would sell the corn. Many have *insisted* that we should sell them, if not large, small quantities of it.

It has seemed necessary, therefore, that we should again state in this prominent place, that we do not, under any circumstances whatever, *sell* the seeds or plants which we are testing at our Experiment Farm. If we do not place them in our Free Plant and Seed Distribution, our friends must look to seedsmen, florists or nurserymen, if they desire to make purchases. The RURAL NEW-YORKER disseminated the Blount's Corn two years ago, and it has ever since been offered by prominent seedsmen. When we succeed in fixing any improvements upon this variety, we may again send it to subscribers. As for the Chester Co. Mammoth, it has already been offered by seedsmen for several years, though its merits had not become very well known previous to the immense yield at the Rural Farm. As seedsmen have offered this variety in years past when its good name was not well established, surely they will not abandon it now that it has shown its great value.

We do not like to talk of what we are doing at the Rural Farm, so long in advance of our power to gratify curiosity. But we are tempted to state that we have reason to hope for more from our wheat experiments than from any others we have ever made. And the results promise to be those in which our good friends may share.

ALLUSIONS WHICH MAY BE PARDONED AT THE END OF THE YEAR.

The RURAL NEW-YORKER has never before received so many compliments as during the present year. These kind words have been to us very acceptable, for we have worked hard and earnestly to merit them. Hard, unremitting labor that meets with no response saddens the heart, let it, at the outset, be ever so full of enthusiasm and trust. The present year—so fast drawing to its end—has been one of exceptional prosperity with this journal. We have considerably increased our circulation; the good name of the RURAL NEW-YORKER has been strengthened; its influence has been extended; its candor and integrity of purpose have been recognized, at least by those who have read it attentively. We have distributed among our subscribers plants and seeds for the farm and garden, which we have believed to be the most desirable among novelties, or those not generally known, that could be purchased at home or abroad. We have maintained our Experiment Grounds for the purpose of determining the best methods of culture, and of testing and originating new seeds and plants, some of the results of which have already proven, and others of which must prove, of appreciable value to the farmers of our country. With rare opportunities to sell the seeds or plants, the value of which has thus been ascertained and made known, we have, without one exception, refused to do so, esteeming more highly the confidence of our readers, which might reasonably be shaken were we to sell the seeds and plants which we have ourselves introduced or disseminated.

Thus while we have benefited our subscribers without cost, we have also benefited the seedsmen of the country who have availed themselves of the demand which the RURAL'S Seed and Plant Distributions have created. Among less weighty matters, we may mention that we have moved from less to more expensive quarters; we have increased our clerical force; we have improved our paper in several respects with which our readers are familiar. All these things we have done, and yet, as the year closes, we find that the income of the RURAL NEW-YORKER has exceeded its expenses, and so we say that this year, with us, has been one of exceptional prosperity.

As, therefore, in the past, our work has been appreciated by our readers and we have been so favored with their encouraging words—so with a grateful recognition of this and with light hearts, we anticipate almost impatiently the labor of another year. With increased experience and means and with the ever-intensifying love which must grow out of the intelligent study, practice and presentation of agriculture, may we not hope still greatly to extend our influence and to feel that we are powerful to promote this foremost, first, best interest of our country?

IS GEN. LE DUC TO BE REMOVED?

Ever since the election of General Garfield to the Presidency, newspapers all over the country have been discussing the probable composition of his Cabinet and conjecturing which of the present Secretaries of Departments it would be wise or expedient for him to retain in office. The public interest in this question is a fair measure of the importance of the character and fitness of the men who are to be the chief aids of the President in wisely executing the laws and his special advisers in suggesting needed legislation. It is quite proper, therefore, that the mouth-pieces of public opinion should canvass and suggest the fitness of those who are to hold such influential positions in carrying on the government of the country and shaping its laws. This is particularly true where a special industry, demanding special knowledge on the part of its representative, is concerned. Of this nature there is only one Department in the Government—a Department which is also an anomaly in that, while quite independent and representing half our industrial population as well as the foundation and most of the superstructure of our national prosperity, it is as yet without any representation in the Cabinet. Yet in view of the paramount magnitude and importance of the industry it subserves, of its urgent need of appropriate legislation, of the special qualifications essential in its representative, and of the difficulties with which he has for the present to contend owing to his singular position, there is no Department whose head should be selected with greater care, in order to conserve and promote the best interests of the country, than the so-called Department of Agriculture.

During the fiscal year ending June 30 last, the total exports of the country amounted to $823,946,353. Of this vast aggregate the products of the farm, just as they came from it, contributed $529,944,779. To this sum should be added $115,690,540 as the value of raw material, such as flour, provisions, etc., and $8,506,038 for farm products used in exported manufactures, making a grand total of $654,141,487 against $169,804,866, the worth of our exports from manufactures, mines and all other sources. Moreover, the farm has fed and clothed our own population and contributed more than half the raw material to our manufactures—yet the head of the Department representing it in our Government has had to be content with the paltry salary of $3,000 a year, one-third that of the heads of other Departments, half that of the United States Geologist, and three-fifths that of a Congressman!

Little wonder, therefore, that since the establishment of the Department in 1862 there has been a succession of men of very mediocre talents at its head, men whose principal labors and ambition have won for them, one after another, the not altogether inappropriate name of Superintendent of the Congressional Seed Store. The meagre salary and the unimportant standing of the Department prevented men of superior abilities and attainments from seeking a position at its head. On the appointment of the present Commissioner, therefore, it was only natural for many of our contempories to consider him of the same character as his predecessors, and on this supposition alone several of them decried him from the outset, and to maintain their infallibility a few of them have been disparaging him, in a milder way, however, ever since. Others objected to him mainly because his name was unknown to them, but these have since remembered that the names of all our most honored men were at one time equally obscure. Others again, because his services had won the rank of General in the late war, found fault with his appointment on the ground that a soldier could know nothing of agriculture or its needs, as if, in sooth, the farmers of the land had not contributed brains as well as muscle to its volunteer armies—a fact which most of these have since acknowledged in his case. To the honor of journalism and especially of agricultural journalism, however, most of our contemporaries waited to see the conduct of Gen. Le Duc in office before pronouncing upon his fitness for it, and without a single exception known to us, these now highly appreciate his efforts for the benefit of agriculture.

A man of fine natural abilities and broad attainments, he has been earnest and indefatigable in his labors as head of the Department which he has raised to such high national importance that its representation in the Cabinet cannot be long deferred. By putting a heart into his work, he has put life into his Department, and stimulated our farmers to improvements in old methods, while intelligently investigating the practicability of adding to the agricultural industries of the nation. In this direction the problem of supplying the country with home-raised sugar has already been substantially solved, mainly through his persistent labors. From this source alone there must be, according to reasonable estimates, an annual saving to the country of 2,000 per cent. upon the total cost of the Department since its foundation.

Through four years of struggle against miserably inadequate appropriations and consequent partial helplessness in a field of vast necessities; against opposition in the legitimate scope of his own Department, and early disparagement from many of those whose support he had a right to expect, Gen. Le Duc has labored so honestly and successfully for the benefit of agriculture as to increase the esteem of those who know him, conquer the good opinion of impartial judges, and silence the carpings of most of those who decried him without reason. If good services under difficulties in the past merit recognition from the incoming President, and if the prosperity of the greatest industry of the country is to be placed before mere personal or political considerations, Gen. Le Duc will remain for the next four years at the head of the Department of Agriculture, in or out of the Cabinet.

During the term of his office he has made the requirements of the industry an earnest study; to-day he knows more about these and the best means of meeting them than any other man in the country; he is now the soul of the movement which is destined in a few years to keep at home the $85,000,000 we now pay annually for foreign sugar; the farmers of the country have learnt confidence in his ability and faith in his efforts, and to remove him now from the midst of his successful labors would speak ill for the statesmanship and the regard for the agricultural prosperity of the nation, with which General Garfield has been credited.

For ourselves, we care not for the politics of the head of the Department, be they Republican or Democrat, and though we highly esteem the present incumbent personally, we should blush to allow personal preference to influence our expressed opinion on a matter of so much public importance. In recommending the continuance of Gen. Le Duc in his present office under the next President, we are actuated solely by our honest conviction that such a measure would conduce most to the best interests of agriculture, which we have close at heart.

THE INDIAN TERRITORY.

SEVERAL organized raids have been made by land speculators and squatters upon the Indian Territory. Considerable pressure has been brought to bear by interested parties upon Congress to permit the settlement of the Territory by citizens, notwithstanding the fact that it has been solemnly set apart as the last refuge of the distressed aborigines. Since the occupation of the Territory by the various tribes of Indians who now inhabit it, a great advance has been made in their condition. From savages, a large number of them have been changed to civilized and industrious farmers, who cultivate more than 300,000 acres of land, own 297,040 cattle and 400,282 swine, and produced the present year 2,346,042 bushels of corn, 336,424 bushels of wheat, 16,800 bales of cotton and other usual farm crops in proportion. All this was done by about 60,000 souls, proving that these men are at least as industrious as many white men and are in as prosperous a condition. Uncivilized Indians in the Territory own 864,137 sheep and 78,812 head of cattle; and the present year produced 415,777 bushels of wheat with other crops in proportion, on nearly 200,000 acres of cultivated land. All this has been done under the objectionable system of common ownership of the soil. When the change to absolute and individual possession, which is so much desired by the Indians, and which desire, in itself, is a conspicuous proof of increasing civilization, shall have been made, it is beyond doubt that this Territory will soon become as productive under the labor of the Indians as the contiguous States are, in proportion, under the labor of white men. Here is a solution of the Indian problem, and one that will make men and women of these people. We do not wish to hear of attempts made to rob these poor people of the last vestige of their inheritance, by white men who have now more land than can be brought under cultivation in the next century.

BREVITIES.

THE Holstein bull Uncle Tom is drawn from a poor photograph. The drawing is a correct portrayal of the photograph, which is all our artist had to guide him. The light falls in such a way as to give the impression of a heaviness of neck and shoulders which is not true to nature.

THE New York State Dairymen's Association will hold its fourth annual convention at Delhi, Delaware County, December 21, 22 and 23 inst. Addresses will be delivered by Prof. L. B. Arnold, Dr. F. E. Engelhardt, Hon. T. S. Gold, F. D. Curtis, S. Hoxie, Maj. Butler Fitch, Orville Wilsey and others.

WE beg to state that many are applying for the "Distribution," forgetting to send their share of postage. We deem it only fair that we should disregard such applications. The worst of it is, however, that these forgetful friends are liable to charge us—when they fail to receive their seeds—with having acted in bad faith.

WE regret to learn that the California Horticulturist has ceased its separate existence and become a part of the Pacific Rural Press. The latter is to be congratulated upon the accession, but it would seem that California, with its immense horticultural interests and remarkable climate, ought to be able to support a purely horticultural magazine. Mr. Charles H. Shinn, the editor, has done his work to the very end in a spirited and able manner.

For Women.

CONDUCTED BY MISS RAY CLARK.

A MOTHER'S WORDS.

ANNIE L. JACK.

When the elder children were round me,
And needed my every care,
Noisy and rough with cloth rent knees
And tumbled, wind tossed hair;
I often thought, when they were grown,
How free my life would be
Then I could rest, and they would work,
And lift all care from me.

But now, my boy so bearded
I hardly seem to know,
He's half ashamed to kiss my cheek
And afar in the world must go.
My girls, though loving in their way,
Have grown so very tall—
And seem so strange—I often sigh
And wish that they were small.

Ah! mothers, when you are weary
And the children seem to crowd,
When they seek you in their troubles,
Or their glad tones are too loud,
Think not of that far future,
When they may help you rest,
Enjoy the present, happy days,
While they love mother best.

DESCRIPTION OF CUTS.

Fig. 423 and 424. Lady's Pelerine, (Crochet. Materials: White Berlin Wool and Wooden Crochet Needle.) A well-fitting pattern is cut out in lining, and the pelerine is begun from the lower edge, as follows: Along 5 chain, work to and fro in the

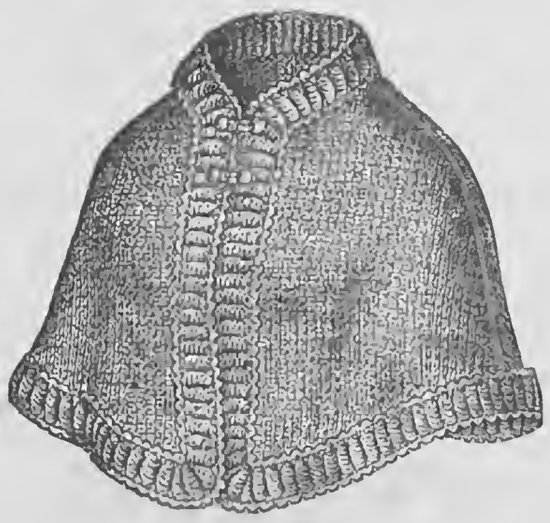

Fig. 423.

ordinary Victoria stitch, increasing as required by the pattern. To decrease, crochet 2 or more stitches together in the 2nd row of a pattern row. If it is necessary to decrease by a greater number of stitches, leave them unnoticed at the end of the row. To increase, cast on, at the *left* side of the work, a chain corresponding in length to the lower edge of the pattern, and in the pattern row where the increase is to be made, take up a sufficient number of stitches out of this chain. To widen on the *right* side of the pattern, crochet a sufficient number of chain at the end of a return row, and take up one stitch out of each in the following row. To increase in the middle, take up a stitch out of the horizontal part of the stitch between two vertical parts. When the separate parts of the pelerine are joined together, a piping cord covered with white cashmere is placed between them. Round the outer edge is a border

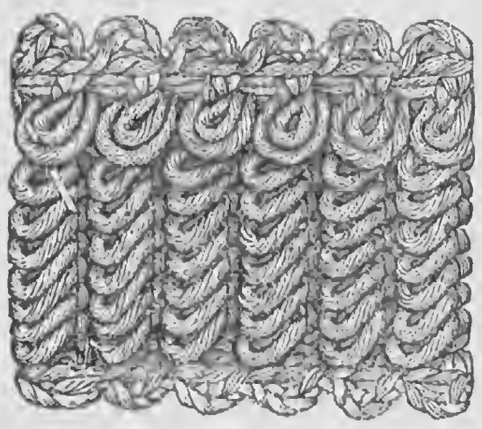

Fig. 424.—Detail of Fig. 423.

(see 424). This border is crocheted with single Berlin wool and wooden needle, as follows: Along 10 chain, miss 1, 9 double, 1 chain. 2nd row; Turn the work, on the side of the work which is now the wrong side place a flat mesh 1 inch wide, * pass the thread from back to front over the mesh, and crochet 1 double in both parts of the double in the preceding row, so as to form a loop, repeat 8 times from *, last of all 1 chain, and draw out the mesh. 3rd row: Turn the work, 1 double in every stitch, last of all 1 chain. Repeat the 2nd and 3rd rows till the border is long enough (of course the loops

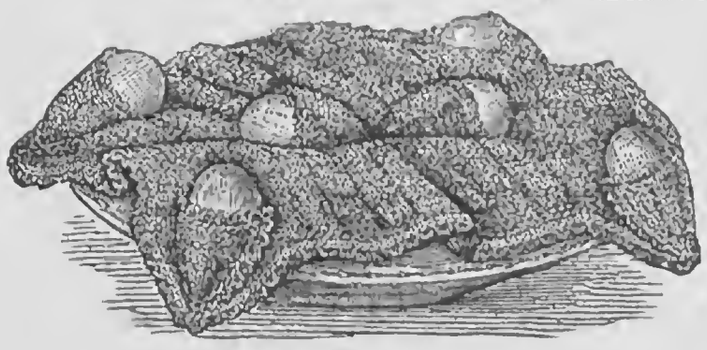

Fig. 427.

are on the *outside* of the pelerine). Then work along each side of the border a row as follows: * 1 double in margin, 1 purl of 3 chain and 1 double, miss 1, repeat from *. Then sew the border on to the pelerine, and add silk buttons to fasten.

Fig. 425.—Purse: Beadwork and Crochet.—The beads are sewn on fine canvas; the groundwork is of dark ruby beads, and the circular design of gold beads in the form of a wreath; both sides may be alike, or, if preferred, the monogram of the owner may be worked in gold beads on the opposite side. To join the two sides, place them together, and with a crochet-hook and silk, work double-stitches through both nearly all round, leaving a space for the first opening; then work four rows of double-stitches.

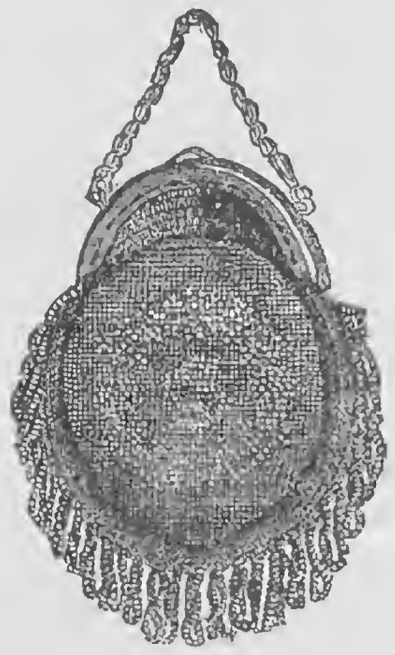

Fig. 425.

For the opening, work on each side separately:
1st row—One double into each stitch of canvas.
2nd to 5th rows—Pass over the two first and two last stitches. A steel clasp is sewed to each side of the opening with a needle and silk.

For the bead-fringe, thread gold beads on silk, and sew them in loops at equal distances to the last row of double-stitches.

Fig. 422.—Hairpin-Cushion.—For this, a box of cardboard five inches square and two inches deep is needed. Cover the sides and bottom with glazed lining, and strain over the top a piece of coarse knitting of wool; use pins about No. 12. Do not stuff the box; ornament the sides with a small piece of perforated cardboard worked with a cross-stitch design, of which we have given many illustrations in our paper. At the top and bottom edges of the box put a fringe made over a large pencil or knitting-pin with wool and wire. A double piece of fine wire, and four strands of Shetland wool, or crewel of four colors together, form the fringe. Each time, after twisting the wool round the pin, twist the wire once; two rows of

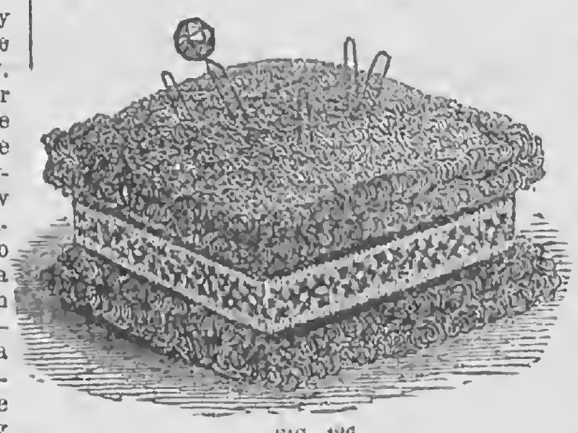

Fig. 426.

this fringe, one up and one down, are sewn round the frame.

Fig. 433.—Cotton-Basket.—This little basket is composed of six sections of cardboard, ornamented with painted designs, or little colored designs may be cut out and gummed on; the sections are tied together with bows of blue ribbon. The bottom is a hexagon of cardboard, also ornamented with flowers. The sides are glued to the bottom, which stands out about an eighth of an inch beyond the sides; this is bound with a piece of gilt paper gummed on.

Fig. 427.—Egg-Warmer.—Materials Required: two oz. pale blue, one oz. pink Berlin wool, two pins, and a crochet-hook.

Cast on eighty-one stitches.
1st Row: Knit three and purl three alternately.
2nd Row: Purl three and knit three alternately.
3rd and 4th Rows: Like 2nd row.
5th Row: Like 1st row.
6th Row: Like second, then repeat from the 1st row. This forms a basket-pattern. Continue the pattern until you have made the foundation the length required.

For the pockets, six of which are needed: Cast on twenty-eight stitches, decrease by knitting two together in every third row.

1st Row: Knit.
2nd Row: Purl.
3rd Row: Knit.
4th Row: Purl.
5th Row: Knit.
6th Row: Knit. Repeat from the 1st row until no stitches remain.

For the crochet edge, which is worked round the foundation and each of the pockets: Work one double into a stitch, four chain, one treble into the first, pass over two stitches, and repeat from the beginning of the row.

The arrangement of the pockets on the foundation will be seen from the illustration; they are sewn on by a needle and wool.

Fig. 434.—Sweetmeat Vendor.—This little figure will be found to give great delight to children, and is suitable either to be placed on the Christmas tree or to decorate the table of a children's party. It is made of several kinds of dried fruits such as French plums, raisins, figs, &c. Take two pieces of wire, fix upon each of them two plums for legs, then pass both lengths through two Normandy pippins for the body; a large plum must be taken for the head; it is carved out with a penknife for nose and mouth, and beads are pressed in for eyes. The hat is made of a piece of writing paper arranged in the form of a cone, tacked together and gummed on a paper brim. For the tray, upon which are placed two or three sugar birds and small cones of sweets, take a piece of cardboard, cover it with crimson paper pinked out at the edge; this is fixed to a stick with a little glue; it must be tied round the waist with cotton. A wide collar of muslin is fastened round the throat of the little man. The two plums which form the legs, and the stick of the tray, must be glued to a square piece of stout cardboard or wood to form a stand.

Fig. 432.—Jewel Box.—The foundation of the box is strong card-board; cut two pieces of the card-board, seven inches in length and four in breadth; one is for the bottom and the other for the lid; the two pieces for the sides measure seven inches in length and three in depth, those for the ends, four in length and three in depth; cover each piece of card on the outside with dark-blue watered silk, and on the inside with wadded and quilted satin; bind the edges with gold-colored satin ribbon; sew the sides and ends together and then to the bottom, fix the lid to one side by hinges of ribbon, and finish each corner with a bow of ribbon. The little box may be used to keep jewelry in, or it will serve as a work-box. It may also be made to hold a little Christmas present, or be filled with choice sweetmeats.

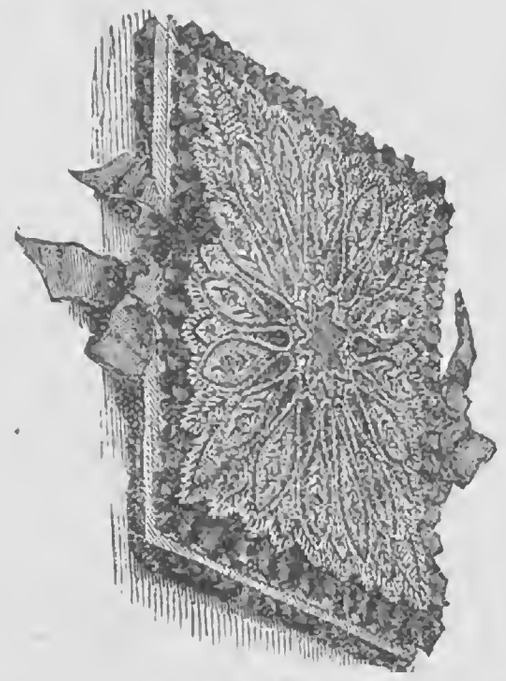

Fig. 428.

Fig. 428.—Handkerchief Sachet.—The sachet is composed of two pieces of card-board measuring ten inches square, covered with rose-colored silk, and lined with quilted silk of the same color. The embroidery for the top, a quarter of which is shown in the full size, is worked on ivory-white satin, embroidered with gold and rose-colored silk; the edges and small holes in the center are cut out with a sharp pair of scissors. The sachet is finished with a quilting and bows of rose-colored satin.

Fig. 429.—Nubian Warrior.—This little figure is made in the same way as described for fig. 434, except that small plums and raisins are used, four of graduated size for each leg. The arms are made by passing a wire through the shoulders and thread-

Fig. 429.

ing three or four large raisins upon it. The hair is made of black wool frizzed out with a comb; it is glued to the plum, and is piled up high and kept in place by means of a large pin; a piece of scarlet cotton or silk is wound round the figure to form a kind of cloak and knickerbockers. The shield is an oval piece of card covered with silver paper, and the spear is cut out of a piece of wood.

Fig. 435.—Doll's Cradle.—With care and a little trouble this little cradle may easily be made. Take a large walnut-shell and thoroughly clean it; carefully saw off the end of half, glue the other two pieces together, and ornament the edge with a little border of cut gold paper; glue two semi-circles of wool on the bottom for rockers, and pad the inside with wood to make a bed, upon which place a very small doll; a little piece of cambric and blue silk form sheet and coverlet.

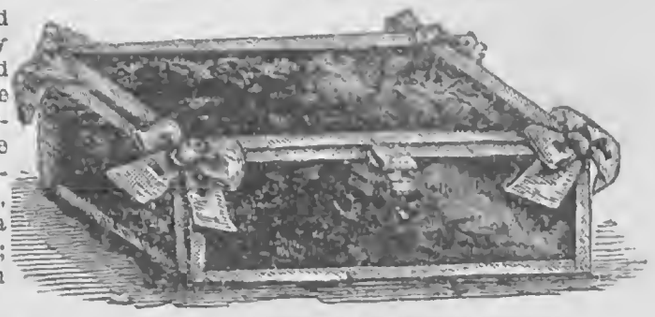

Fig. 432.

Fig. 436.—Basket for Firewood. (Crochet.)—Open basket of Italian straw, gilt on the outside, and having on each side a vandyked border of dark olive velvet, and crochet pattern of blue and olive wool. Wools may be used for the border along the lower edge of the basket, and for the two rows of tassels.

Fig. 430 and 431.—Ornament for Christmas-Party Supper Table.—This ornament is easily made; it is suitable either for a Christmas-tree or supper-table. Procure a wooden doll about eighteen inches in hight, break off the arms, make a hole through the shoulders, through which pass a stout wire, covered with wadding then with pink silk; this takes the place of the arms (see Fig. 430), the loose coat must be made of some bright-colored silk, edged with gold paper cut at one edge to form a fringe, the legs are covered with fringed gold paper, twined round spirally; the trousers are composed of two rows of small bon-bons, which must be tied to the legs with sewing silk; the silk coat is tied round the waist with a piece of ribbon, from which are suspended gilded cones, the fringe of the coat falling over the last row of bon-bons as a flounce; another row of bon-bons is fixed round the body, the sleeves and collar being composed of bon-bons of a smaller size. Father Christmas holding a tree is placed in one arm, and a baby doll in the other. A golden cornucopia forms the cap, with fringed paper for the hair; it is ornamented by a gilt chain. A fancy star or some little trinket is suspended from the neck.

Fig. 430.—Detail of Fig. 431.

WHAT MAY BE SEEN IN NEW YORK.

To those of our friends who contemplate a "trip" to the city and also others remaining outside its limits, we wish to relate what the former may experience and the latter enjoy hearing of, that is, a visit to the establishment of Lord & Taylor, corner of Broadway and Twentieth street.

As a special privilege, a call was made upon the genial proprietors and afterwards we were escorted to the suit department and then allowed to wander at will through the different departments gaining desired information from the agreeable and attentive clerks.

Fig. 431.

In anticipation of the many balls and holiday receptions, costumes to please the diversified tastes were displayed. Elegance of material combined with artistic taste was here revealed. The first attractive feature was a dress of pink silk and embossed velvet, marooned figured, en train; A fan-shaped pleating of the plain silk on the lower portion of the front breadth and the upper part which formed the overdress; on the bottom of this was handsome fringe. The two materials were well combinated, the outside of sleeves being of embossed velvet, the under of solid pink; at the back was a knot with ends from which depended knobs of maroon beads. The neck, cut square, was filled in with lace; the sleeves plain at wrist with lace to finish.

Another was of white satin having beaded panier, the front decorated with beaded trimming to match the panier, this, with corresponding appointments completed this elegant dress which was valued at $215. But to use an expression for which the ladies in general no doubt receive undue credit, the one which was "a love of a dress" was of heliotrope satin with velvet em-

For dinner and street attire were shown many modes. Dinner dresses of black silk and velvet with jet trimming cost $185., $200. and $220. Black silk walking suits ranged in price from $80 to $250.

FIG. 433.

A suit costing $130. was constructed of brown satin and plush, the basque of striped plush with revers having beaded trimming to match. Another, of olive-brown silk, with passamenterie and cashmere trimming, was valued at $140. A black satin with revers and other appointments of old gold, was embellished with handsome jet knobs, balls and other ornamentation. Still another of wine-colored cashmere with plush trimming, formed the group selected for special reference. The English walking jacket style was used on many of these. A wrapper with long train was of light, or "baby," blue cashmere, trimmed with cord and satin in fancy pleating down the entire front.

Yes, there were many less elaborate suits which would meet the wants of persons of plainer taste and with whom economy is a necessity; this answer we give in expectation of a query from many quarters. These, however, we have not specified, considering most readers to be familiar with the medium styles.

Next the cloaks attracted our attention; in these the most fastidious could scarcely fail to find their peculiar fancies gratified. A dolman of embossed plush with passamenterie trimming and chenille fringe with beaded end; A cloak of satin de Lyon lined with old gold plush with trimming of chinchilla fur was extremely elegant; another was made with a long cape of embossed velvet; Dolman of Sicilian satin lined with purple plush bordered with heavy chenille fringe.

FIG. 434.

A French walking jacket—one of Worth's—was trimmed with satin and narrow braid edged with gilt threads, the buttonholes bound with the braid, the buttons of cashmere design. A long coat of embossed velvet, double-breasted, with cashmere buttons was plain but rich. A particular novelty was a long coat or cloak bordered with heavy fringe, the neck and sleeves finished with shirring and silk cord at the back. The seam at the back was opened about half way up from the bottom and pleatings of embossed velvet inserted. Plainer coats at $22 and less, completed the display.

Shoes have their place in fashion's domain, and keep pace with the changing modes. In this department were exhibited shoes and slippers of red, white and black satin embroidered with beads, ranging in price from $3.50 to $14. Misses' and children's slippers, with warm lining, costing $1 00 to $1.35 invited attention. The lovers of comfort who ride in the frosty weather, will undoubtedly secure at first sight a pair of the carriage shoes; they are made of velvet lined with fur, valued at $5. Money well expended would be our verdict to purchasers. The common sense shoe for daily wear had not been forgotten.

In dress material, cashmere with bordering and fringe complete for suits of overskirt and basque, costs from $40 to $44; price of overskirt $10.25. Suere satinette at $1.50 to $1.75 is an improvement on the old goods bearing the name of satinette. These with many other goods are in the popular shades.

The woolen, hosiery and lace departments contributed their share toward the supply of visitors' wants.

Fans exquisitely finished, and others of plainer make can be here selected, and as Christmas gifts would supply the giver with a pleasing memento. One was of embossed satin with feather edge at $2.50; one of pearl and plain white satin at $4.75; another of héliotrope plush with feather edge and ivory handle at $5. White satin with spray of flowers and carved ivory handle at $2.50. Another composed of long, black feathers with design of birds in painting at $12.50. Other plainer ones at 75 cents were worth notice and the price asked.

Fancy articles in seemingly endless variety met the gaze. Brushes and combs of celluloid, whisk holders, cushions, card receivers in majolica-ware, silver, gilt and shell, scent bottles in cases of plush, in wood, etc. Pails with satin covering and satin gathered at the top, to form a basket shape, something new for hair receiver, also used for other purposes.

Many other novelties in this line deserved more attention than time allowed.

My story would be sadly incomplete if the few words on handkerchief holders were omitted. Of these, one costing $4.50 was of white satin within and without edged with pleating of blue satin ribbon, in the center a spray of flowers, hand painted, was a marvel of beauty, another of much the same make had painting of birds with sprays of reed, another of heliotrope was extremely pretty. Some were puffed instead of pleated.

We might increase and enlarge upon the details but, as expectation rather than realization is with many the soul of enjoyment, we leave a field for this particular class, who as the holiday season approaches will doubtless avail themselves of the pleasure of a similar visit.

CROOKED FOLKS.

It is a happy household which has not one crooked member, some one who calls forth the forbearance of the rest and is a constant means of grace, by giving them a chance to restrain their tempers and speak civilly when human nature sets quite the other way.

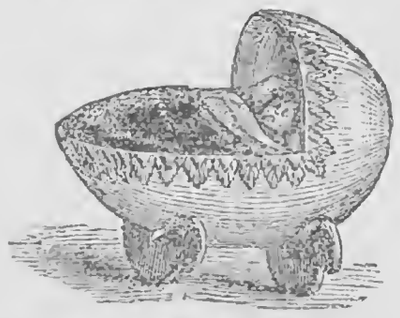

FIG. 435.

It is a very easy thing to get along with pleasant people; anybody can do that, and "there is no merit in being jolly under such circumstances," as Mark Tapley would argue. But how to get along with crabbed folks who set your nerves on edge continually; oh! that is where grace is needed.

Yes, that is just it; grace only can give you the perfect victory. Good, plain, common sense, though, will suggest many things wise and expedient.

There is most likely a best side even to such people, anyway a better side. Find that out and then give them a chance to let their virtues shine. Stir up the bad side as little as you can. Concede a number of things you might stand out for rather than have strife.

Yet beware about too great yielding or you have fastened a tyranical "old man of the sea" upon your shoulders, who cannot be easily shaken off.

Where you must have your own way take it as quietly as possible Use few words and let the other side do all the storming; it is so much better and such a saving of self-respect and dignity of character.

Soften your heart toward the person, particularly if she is aged, and remember that you will never regret your forbearance and kindness when that gray head lies in its coffin-pillow.

Age has many infirmities, and where the temper has not been disciplined in youth or chastened by God's grace, it is apt to be most unlovely; a suggestive thought for those who are now coming up the path they must shortly begin to descend.

We have all of us seen or known old people on whom it was arduous to attend. But pity should make our hearts tender toward them. It is a lonely thing to come to that pass in life when we have left behind us the hopes and joys of existence, and life itself has become but a bundle of infirmities.

The aged live in the past. Draw them out on their favorite topics. Avoid the sharp angles of character as much as you can, and as a general principle keep pleasant yourself towards crooked people, young or old, and you have disarmed them of all their ability to injure you.

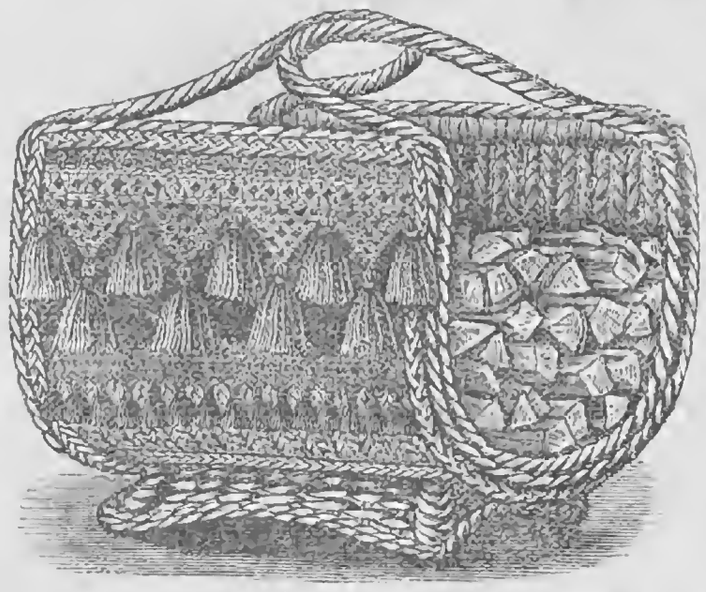

FIG. 436.

Mrs. J. was a woman no neighbor could endure, and she thought poorly enough of each in return. But that sweet daughter-in-law of hers, who lived near was a jewel in her eyes. "I can tell you," I once heard her say emphatically, "if one wants to quarrel with Lucy they will have to do it all themselves." She admired and respected the gentle spirit of the girl, though so entirely the reverse from her own. AUNT OLIVE.

ELEVEN years ago Clara Morris played eight times a week for $20. She now plays six times a week for $2,000.

Literary Miscellany.

WHAT THE CHIMNEY SANG.

BRET HARTE.

Over the chimney the night-wind sang
And chanted a melody no one knew;
And the woman stopped as the babe she tossed,
And thought of the one she had long since lost,
And said, as her tear-drops back she forced,
"I hate the wind in the chimney!"

Over the chimney the night wind sang
And chanted a melody no one knew;
And the children said, as they closer drew,
"'Tis some witch that is cleaving the black night through—
'Tis a fairy trumpet that just then blew,
And we fear the wind in the chimney."

Over the chimney the night wind sang
And chanted a melody no one knew;
And the man, as he sat on his hearth below
Said to himself, "It will surely snow,
And fuel is dear, and wages low,
And I'll stop the leak in the chimney."

Over the chimney the night wind sang
And chanted a melody no one knew;
But the poet listened and smiled, for he
Was man, and woman, and child, all three,
And he said, "It is God's own harmony
This wind that sings in the chimney."

INMATES OF LESTER HALL.

(Continued from page 805.)

CHAPTER XXIV.

DINNER was over, and the guests assembled at Mrs. Brayburn's were seated in chairs placed in the most approved concert semi-circle before a heavy red velvet curtain, which concealed one-half the room which had been arranged as a stage.

The children, the older portion of them at least—for the very small people had been carried away to bed in various stages of fatigue—were seated in front, while behind, those of the guests who were not going to take part in the tableaux were chatting, talking and flirting, while waiting.

The room was but dimly lighted, all the lights being concentrated on the stage, which, when the curtain rose, was found to be brilliantly lighted for the first tableau, which chanced to be a representation of Millais' matchless picture, "The Black Brunswicker," which was personated by Miss Heriot and a handsome young officer, Captain Edward Tyrrell, Lottie's brother. Very beautiful looked Miss Heriot in her sweeping white satin robes; and Captain Tyrrell had drilled his handsome face into the sad sternness of the young officer as he tried to leave the lady of his love on that awful night, the eve of Waterloo.

There was but one fault to be found with the picture, which was a complete success (even Bijou, Mrs. Brayburn's little dog, behaving perfectly), and that was, that the woe depicted on Miss Herlot's face was marred by the little expression of gratified vanity which played round the sweet carmine lips. The curtain fell amid loud applause, and on their return to the room both performers were received with warm expressions of praise.

"Now, Miss Lester," said the manager quickly, "you are next. Fall into position. I think I need not school you—you have the very expression on your face now."

The second tableau was a representation of the companion picture, "The Eve of St. Bartholomew," or the Huguenot picture, as one generally (correctly or incorrectly) hears it called, and was personated by Cecil and Mr. Brayburn's brother, who had some slight resemblance to the beautiful face Mr. Millais has given his hero. This picture was as perfect as its predecessor, and the guests were loud in their applause and commendation.

"How wonderfully your niece got that expression, so sad and sweet," said an old lady, sitting beside Mr. Daton; and he himself was haunted by an idea that Cecil's eyes were always sad and sweet now as they were then.

The third tableau was one of quite another style and represented a scene from Longfellow's poem, "The Courtship of Miles Standish:" that scene where John Alden undertakes to plead his friend's suit with Priscilla, and the dainty little Puritan maiden turns on him with the demure question, "Why don't you speak for yourself, John?"

The actors in this tableau were Lottie Tyrrell and Ernest Eleston, and two more suited to the subject and to each other could not have been chosen. His lordship made a very prepossessing John Alden, and looked properly bewildered, shamed, and pleased as the pretty little damsel turned to him with the hot blush on her cheek, and the half-mocking, half-tender look in her hazel eyes; and amid the applause that followed the fall of the curtain the young people left the stage and re-entered the room in a rather subdued silence.

"That must have been a pretty picture, Miss Tyrrell," said Cecil, looking up smiling, "Did Ernest behave himself? I heard one man who played John Alden winking audaciously with the eye which the audience did not see, and covering Priscilla with confusion."

"I hope you did not think me capable of such an atrocity," said Ernest, seating himself by Cecil.

"No, of course not," she answered, smiling; then she put out her hand and drew Lottie down to the sofa by her side with a tender, caressing touch.

"Do not run away," she said, gently. "None of us are wanted for the next tableau, are we?"

"No," said Lottie, blushing, and looking pleased at Cecil's gentle manner, and the next tableau which was a representation of Retsch's engraving, "The Game of Life," passed while they sat there in silence; and Cecil held Lottie's hand in a warm, tender clasp, and looked at her with kind, wistful eyes, in which lay an unspoken pain.

"She is a pretty child," she said, gently, when the girl left her side to take part in the next tableau. "Do you think her father would let her marry Dr. Carewe, Ernest?"

"Marry Dr. Carewe, love!" said Ernest, coloring a little. "Why do you think of such a thing?"

"I think he—he—he likes her," said Cecil, softly, "and that she likes him."

"Do you?" said he, smiling. "Well, he is much older than Lottie; but I should think General Tyrrell would consent—Carewe is such a splendid fellow. I should be glad to see Lottie settled," he added.

"Why?" said Cecil, speaking absently.

"Oh! for many reasons," said Ernest "She is a tender little soul, and wants some one to pet her and take care of her. There is Mr. George coming to you, sweetheart. I wonder what he wants now?"

"Miss Lester, you are too generous to refuse us another favor," said Mr. George, smiling. "The rest of our tableaux are taken from Tennyson's 'Idyls,' you know. The first is Enid, at her window, singing the song of 'Fortune and her Wheel.' Miss Tyrrell makes a charming Enid, but she cannot sing, and it would add so greatly to the effect if the song is sung, that I feel sure you will do us this pleasure."

"If you wish it, certainly," Cecil answered; and when the curtain rose on "Enid," the audience was charmed by the sound of a rich, sweet voice, singing:—

"'Turn, Fortune, turn thy wheel, and lower the proud;
Turn thy wild wheel thro' sunshine, storm and cloud
Thy wheel and thee we neither love nor hate.

"'Turn, Fortune, turn thy wheel, with smile or frown;
With that wild wheel we go not up nor down;
Our hoard is little, but our hearts are great.

"'Smile and we smile; the lords of many lands;
Frown and we smile, the lords of our own hands;
For man is man and master of his fate.

"'Turn, turn thy wheel above the staring crowd;
Thy wheel and thou are shadows in the cloud;
Thy wheel and thou we neither love nor hate.'"

"Does not she sing beautifully?" whispered Lottie to her friend Dr. Carewe, when she was released. "Have you ever heard her sing before?"

"Yes," said Lawrence, softly, for the sound of the rich, sweet voice had taken him back to the past—to those few wonderful days of happiness unutterable when he had been mad enough to think Cecil loved him.

"Did you know her well?" said little Lottie, in a hushed tone, for Cecil was surrounded by a little halo of romance in her eye—so beautiful—so queenly—so beloved.

"No," he answered, and his voice changed and hardened. "I did not know her well. Hush! my child, she is singing again."—To be continued.

THE EYE-OPENER.

It does not necessarily follow that every name mentioned here belongs to an out-and-out swindler; we wish only to guard our friends—and their friends—against investing money where we have good reason to believe they will either lose it altogether, or receive for it a very inadequate return. The information on which we shall base our judgment will come to us in the future—as it has in the past—from various sources, and we shall be always careful to avoid doing injustice to those against whose methods of doing business charges are made, while resolute in exposing all dishonest attempts upon the pockets of our friends.

L. Strong, 194 Clark Street, Chicago, advertises a "Grecian Wedding Jewelry Casket, containing six pieces, none of which could be bought separately in any city in America for less than six dollars," yet this generous soul is willing to sell the whole $36 worth for 35 cents. A fraud? Why, yes, of course, and to arrive at this conclusion it isn't necessary to know—what is a fact—that no "L. Strong" is known at the address given.

Chicago is rich in such philanthropists. L. Platt, 87 and 89 Washington Street is another of 'em. His "line" is the literary one. Leaving a Philadelphia "concern" to "take folks in" with the Bible, he offers them a like chance of being duped with Shakespeare. He is anxious to present everybody with an $8 perfect edition of the entire works of the poet *gratis*, charging only $2 for packing and expressing. Oh, Platt, you must think the world is "flat"!

That Quaker City "concern" is not the only one that speculates in the public gullibility with regard to the Bible. A. J. Nettleton *alias*, the Excelsior Bible Publishing, 71 Dearborn Street, Chicago, is running an opposition shop at which the world can get $15 Bibles for $5. Sanctimonious Nettleton!

Cheap watches are being largely advertised both by circulars and otherwise. Many of these "watches" are mere toys "meant to deceive"; and it may be taken as a safe rule that cheap in such cases means worthless or nearly so. Bear this in mind, and don't be tempted to invest in such useless baubles.

Like a hydra, Chicago swindlers are many-headed, or rather, like a Spanish princeling, they are many-named. Thus one of the tribe is variously known as M. G. Sanford & Co; J. Wallace & Co.; James Winslow & Co.; G. G. Knox & Co.; the Sprague M'f'g Co.; the United States Steam Engine Co.; Prof. R. Hendricks; the Imported Fire Arms Co., and the Empire Wringer Co. He has many irons in the fire and deserves to be branded with every one of them, red-hot.

Another of the same tribe is Scott, who, according to a Chicago contemporary, as plain James P. Scott, publishes at Chicago what he calls the Agent's Guide; as Aaron Hopewell, he deals in needles; as D. D. Dinsmore he tries to make the people believe that he will sell a fifteen-dollar

Webster's Unabridged for forty-three cents; as Frank A. Blade he advertises a new map of the United States and the world; as W. H. Wiseman he sells paper handkerchiefs, and as D. D. Dinsmore again he sells a Treatise on the Horse and His Diseases. Mr. Scott, in his Agent's Guide advises agents to try Mr. "Hopewell," the needle man, and so on, one of his allases recommending another.

PRESIDENT-ELECT GARFIELD, when he was a very small boy of three years old, went to school to a lady who in her old age delighted to relate the little fellow's pranks. He was so persistently mischievous that to keep him still his teacher promised that he might sit on the larger bench as soon as he learned to read. He went to work with a will to learn, and before he had been at school a week he could say his letters, and several weeks before the end of the term he claimed and received his permission to sit on the high seat with the other scholars.

More health, sunshine and joy in Hop Bitters, than in all other remedies.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

CONCERNING BEDS AND BEDDING.

MARY WAGER-FISHER.

A VERY expensive feature of house furnishing is the bedding, and a nice bed, and a good one, should be well taken care of and protected from dust. A great many people who claim to possess "common sense" still continue to have their bed-room floors covered with a carpet which is nailed down and not taken up and shaken more than twice a year. It follows that whenever the carpet is swept, more or less dust is put into motion and settles in due proportion upon the bed. If, prior to the sweeping, the bed be covered with a large duster, this difficulty will be avoided.

For a bed of large size it requires ten yards of calico to make a duster—four widths, two and a half yards in length. Very nice calico, well starched, can be had for from seven to eight cents a yard. For ten cents a yard beautiful chintzes can be had, in bright rich colors. For a three-quarter bed three widths of the calico are enough, but the length must be two and a half yards. If all the bed-rooms in the house are swept on the same day, at least two dusters are required for "sweep-day" purposes, while a duster each for all beds not in constant use is needed. To keep a spare bed "made up" is a great piece of extravagance. The bed linen and bed spread become gradually soiled, and when the bed is to be occupied it needs to be made up afresh in order to be in proper condition. The best housekeepers keep all their bedding—pillow-cases, sheets, covers, etc.—folded when not in use, and the bedding carefully protected with a chintz cover, which lends a bright and tidy appearance to the room. Some have a case made of blue-and-white checked cotton for protecting the mattress from soil. A pair of sheets the size of the top of the mattress, with a thin layer of cotton between, and quilted on a machine, is very nice for a sandwich between the sheet and mattress. It is easily worked, adds to the comfort of the bed, and protects the mattress. Whatever will keep bedding *clean* is desirable, for it is undeniably laborious work to clean bedding.

Long sheets which turn down a full half yard over the bed covers protect them very much from becoming soiled. For warm, heavy blankets in constant use, and which can only be cleaned without injury at considerable expense, a shield of white muslin can be very effectively used. If the blanket be two and a half yards wide, that much in length of muslin will be required, with a little allowance at each end for a hem. Fold the muslin straight through the center the long way, so that one half will go on one side of the top end of the blanket and one half on the other side. With a needle and thread fasten the muslin to the blanket across the top with basting stitches, and again at the bottom of the muslin. The muslin shield can be removed and washed as often as one likes.

Bed-ticking stained with blood from nose-bleeding, wounds or other causes, may be cleaned by applying starch, well moistened with water, to the spot. Renew the wet starch until the stain is extracted, the wet starch absorbing it.

A cheap and very comfortable bed, with an under-bed of straw, hay or husk, can be made by putting on the top a light cotton "mattress," which can be made at home. For the two sides of the "mattress" bed-ticking is best, and they should be somewhat longer and wider than the top of the bed, as in tying the size is somewhat reduced. Put two or three times as much cotton between the "sides" as are put between those of a "comfortable," and tie quite closely; finish by turning in the two edges and sewing them overhand, or stitch on machine.

Beds of straw or husk look infinitely better and are far more comfortable when the ticks are made like those of a mattress, with a straight, upright piece sewed in all around. The corners should be clipped off, so that the tick will be round at the "corners," as it fits the bedstead better. Do not fill the tick through an opening at one end, but through a slit cut in the middle of the top "side." This slit should be two feet long; one side should be faced, and on the other sew a wide piece to act as a lappet, which should button over on to the faced side. When the filling of the tick becomes disarranged or needs to be stirred up, the convenience of the slit will be made manifest. I once supposed that everybody made straw ticks in this way, until I found out differently, which must be my excuse for giving this description.

If a bedstead has become infested with the small insect that the English call a "Norfolk Howard," and is difficult to be kept free from the pest, give a good coat of paint to every part of it that is not varnished, and you will have no further trouble with bugs.

ONE WEEK FROM MRS. CLAY'S JOURNAL.

ANNIE L. JACK.

MONDAY.—We do not follow that law of all good housewives that says 'Thou shalt always wash on Monday," for to do so does not suit our convenience. So, when the morning work is done up, we sort over the clothes and soak them, I often taking the opportunity to mend a rent in a curtain, or some fine fabric, that will iron the better for being repaired before washing. But I often say I can mend clean garments without any trouble, but always protest against having to patch any dirty thing. I have seen men bring in a pile of bags from their granary, dump them on the kitchen floor, with dust and refuse of all sorts in them, and call upon the women-folk to mend them at once; I should always object unless allowed to put them through the washing-machine first. While we were busy at this sorting for the wash, I talked to the little girls of their lessons that are still recited at home, after they have taken their share of household duties. This is easy work for my afternoons when knitting or sewing, and I enjoy having them with me and watching the development of their ideas. We have no text books in horticulture, but in the study of botany take every day the name of a plant or flower and give the methods of cultivation and uses, culled from our varied reading. To-day we were talking of fruits, Karen saying that she would like best to live where oranges grow, and I told her if she were there awhile she would give them all for a rosy apple, and how wise it was of the Creator to suit the growth of the fruits to the needs of the people of different climates, and the fruits of every climate to the seasons when we seem to require them, and how wonderful was this provision when we remembered that these varied fruits contained the elements needed to keep the system in health and to purify and correct the action of the blood. Sometimes Alex. is very tiresome during lesson hours when he cannot go out of doors. I find nothing amuses him better than a lead pencil and a piece of paper, or a volume of bound magazines, of which we have plenty. True, they get thumbed a little, but so long as a child does not destroy a book, I consider it is a very good kindergarten, and it educates the senses. We bought our "St. Nicholas" and "Wide Awake" in order that the children might gain all possible good from them, and that cannot be done by keeping them in the book-case. I find by taking one or two studies a day, each day in the week, I can teach all the children need, and on Saturday they have extra household duties and extra musical practice, so that every day is full. So together we work, and hope and endeavor to "act in the living present."

DOMESTIC RECIPES.

An Alabaster Effect.

Common plaster-of-Paris figures may be made to look like alabaster by simply dipping them into a strong solution of alum water.

Ink Stains from Paper.

First wash the paper with tepid water, using a camel's hair brush for the purpose. Next, wet the stains with a solution of oxalic acid—one ounce to a pint of water—and finally wash the spots with clean water and dry with white blotting paper.

To Cook a Pie Melon.

Peel, cut into small pieces and stew until tender. To every pint of cooked melon add one teaspoonful of tartaric acid. Sweeten to taste; season with butter, allspice or nutmeg, and bake same as green apple pies, which they resemble.

Pork Apple Pie.

Make crusts same as for any pie. For filling: First a thin layer of sour sliced apples, then sprinkle over little bits of salt pork—chopped fine and rinsed in cold water—with plenty of sugar and cinnamon or nutmeg. Put in two layers each, of apples and pork; add a very little water; dust over flour; put in crust and bake three-quarters of an hour in a moderate oven. Eaten warm. MARY B.

QUESTIONS ANSWERED.

Keeping Muskmelons, Tomatoes, etc.

U. D. V., Robeaygeon, Ont., Can., asks, 1, how to keep muskmelons and tomatoes until the Fall shows; 2, how to keep cabbage and mangels so as to have seeds for next year's planting.

ANS.—1. The best method to keep early muskmelons, tomatoes or apples so as to be shown at the fairs later in the season, is to place them in a dry box and put it in the ice-house or refrigerator—the former is preferable. By keeping a journal of "when planted" and "when ripe" one can judge in the Spring about what time it is best to sow or plant to suit the Fall shows. 2. Cabbages, if only a few choice heads are chosen for seed, can be pulled up and hung in a dry, cool cellar *heads downward*, with whatever earth clings to the roots. If many are to be kept, *pit* them and keep them covered with snow. Mangels are easily kept in a good dry cellar.

Suffer on, Groan on, Sicken on, Die on, if you will not use Hop Bitters and be cured.

The Companion

Aims to be practical, yet entertaining; bright, yet judicious; instructive, yet never dull; and by the variety, excellence, and comprehensiveness of its reading, it endeavors to interest all classes of readers. It will give during the year 1881,

Illustrated Serial Stories.

William Black . . . An Illustrated Serial Story.
J. T. Trowbridge, . . An Illustrated Serial Story.
Harriet Prescott Spofford, . A Story of School-Life.
Louise Chandler Moulton, . Tales for the Fireside.
Harriet Beecher Stowe, . . . Tales of Florida.

Travel and Adventure.

Archibald Forbes, the famous war correspondent of the *London Daily News*, will give personal incidents and adventures in camp and on the battle-field.
C. A. Stephens—A Serial Story of Adventure,—Illustrated.
W. T. Sprague—A Serial Story of Frontier Life,—Illustrated.
Travels and Adventures, in various countries, by U. S. Consuls.

More than Two Hundred Stories

By Regular Contributors and by new writers, among whom are:

Marion Harland,	Harriet Beecher Stowe,	J. T. Trowbridge,
Saxe Holm,	Louise Chandler Moulton,	Marie B. Williams,
H. H. Jackson,	Elizabeth Stuart Phelps,	Rose Terry Cooke,
Susan Coolidge,	Harriet Prescott Spofford,	Julia Eastman,
John Habberton,	Charlotte Mary Yonge,	Mary A. Denison,
Frances M. Peard,	Rebecca Harding Davis,	Ruth Chesterfield,
Olive Thorne,	Sarah Winter Kellogg,	A. H. Leonowens.

Popular Sketches.

Archibald Forbes will give sketches of Royal Personages, and of European Statesmen and Generals he has met on the battle-field and in other exigencies of military and political life.
Frank Buckland, the eminent English naturalist, will give papers upon his personal experiences in the study of animal life.
The Perils of a Diver's Life, or wrecking under the sea. By John Osborne.
Among the Boomerang Folk, and life in the Australian Bush.

Games and Recreations.

How to Make a Gymnasium, . By **Prof. D. A. Sargent.**
Lacrosse, Base Ball, Cricket, etc., . By **Henry Chadwick.**
Holiday Household Entertainments . By **G. B. Bartlett.**

Valuable Articles--Illustrated.

By **Prof. Richard A. Proctor**—Upon "Old and Young Worlds"—The Dog Star, and its Companions—Comets—The "Immensity of Space," etc., etc.—Illustrated.
By **E. P. Whipple**—Personal Recollections of Prescott, the Historian—Rufus Choate, and Charles Kingsley.—Illustrated.
By **James T. Fields**—Sketches of a Famous Group of American Authors, Cooper, Willis and Halleck.—Illustrated.
By **James Parton**—Women who have led society—Josephine—Catherine II.—Queen Elizabeth—Victoria—Mrs. John Adams, etc.
By **Mrs. H. O. Ward,** author of "Sensible Etiquette"—Upon the Etiquette of Common Life—Table Manners—Dress Toilet—Conduct in Public Places—Presents—Introductions—Letters—Notes—Duties of Visitors—Duties of Guests—etc., etc. Ten articles.
By **Prof. Luigi Monti**—Personal Recollections of Victor Emanuel and of Garibaldi—Incidents Illustrating the Duties of Consular Life.
By **Carlyle Petersilea**—The Music Student Abroad—His encouragements, his difficulties, his social relations and moral dangers.
By **Mary Clemmer**—Reminiscences of Public Life in Washington.

Poems.

John G. Whittier,	Henry W. Longfellow,	J. T. Trowbridge,
James T. Fields,	Paul H. Hayne,	Sidney Lanier,
Edward Lear,	Edna Dean Proctor,	Mr. and Mrs. Piatt.

Practical Articles.

Opportunities in the West for Young Men, by E. P. Ferry, Governor Washington Ter.; M. Brayman, Governor Idaho; J. W. Hoyt, Governor Wyoming; and other Territorial State Officers.
Occupations for Women—Showing the ways by which Women and Girls earn Money. Teaching—Dress-making—Keeping a Little Store. Each article by a woman who earns her livelihood in the occupation she describes.
Frederick C. Shattuck, M. D.—What is to be done in ordinary sickness, before medical aid can be called—Also, Papers on Baths and Bathing—The care of the sick and of the sick-room, etc., etc.
I. H. Knight, M. D.—Throat Diseases—their causes, and ordinary means of prevention.
James Upham, D. D.—Best Suggestions of the Medical Journals.

Editorials.

Editorial Department—This department will contain Editorials upon current topics in art, politics, ethics and literature, with the brief editorial paragraphs that have proved so acceptable a feature during the past year.
Children's Department, for Youngest Readers. Beautifully Illustrated. The best authors and artists are employed in this department, and no effort is spared to secure the brightest things.

SPECIAL OFFER.

To any one who subscribes now, and sends us $1.75, we will send the Companion free to January 1st, and a full year's subscription from that date.

Subscription Price, $1.75. Specimen copies sent free.

Please mention in what paper you read this advertisement. Address

YOUTH'S COMPANION,
41 TEMPLE PLACE, **Boston, Mass.**

News of the Week.

HOME NEWS.

MONDAY, Dec. 6, 1880.

Mr. and Mrs. Kelley, of Norwich, Conn., who had been from home during the evening, were returning home, when they were met by James Goode, who quarreled with Kelley. Mrs. Kelley, thinking her husband in danger, stepped between the two men and received a serious knife wound in the left side. She was carried home and the wound was dressed. Later in the evening Goode was stabbed in the abdomen. The surgeon says he cannot recover, and Mrs. Kelley is also supposed to be in great danger .....The President and Mrs. Hayes entertained at dinner President-elect Garfield and wife and the members of the Cabinet (with the exception of Attorney-General Devens, who was out of the city), most of them being accompanied by their wives. Other invited guests present were Chief Justice Waite and wife, Justice Strong and wife, Assistant Secretary of State Hay and wife, Senator Morrill and wife; George Bancroft, the historian; Congressmen Butterworth and Townsend of Ohio, and Horace Davis, of California; ex Congressman Shellabarger, Mr. and Mrs. Norris, of San Francisco.....A boiler exploded in Andrew Moore's foundry at St. Charlotte, Mich., demolishing the building and killing outright George Moore, his son, and another man, unknown, and severely injuring four others, one or more of whom may die.

Col. D. M. Brown, a well-known citizen of Pembroke, Ky., and a member of the last Legislature, was shot and instantly killed by Cass Wilkins, a clerk in a livery stable, the result of a quarrel about Wilkins's care of Brown's horses ..... Brockway, Owens and Smythe, supposed forgers of United States bonds and currency, recently arrested at Brooklyn, were released at the suggestion of officers of the Secret Service, it being intimated that there were other parties they were trying to get hold of.....General Ingalls, of the Quartermaster's Department of the Army, has had a member of the firm of Sherwin & Co., commission merchants at Chicago, arrested upon the charge of embezzlement in connection with a grain speculation in which the General was concerned. .....The small steamer W. J Portivant, owned by Memphis merchants and plying the Hatchie River trade, struck a snag near Bollvar, Tenn., and sank in six feet of water. The boat was valued at $9,000 and was insured for $6,000. The cargo was valued at $1,000 and was insured.

Carrie Haines, 20 years of age, in a fit of despondency, caused by unrequited love, threw herself in front of a passenger train at Fairmount, Ill., and was instantly killed.....William Ash, a constable of Terre Haute, Ind., was shot and killed by Elijah Pierson, a crazy man, in an attempt to arrest the latter on a peace warrant.....Mrs. Mary E. Welsher was found guilty at Le Sueur, Minn., of the murder of her husband.....A convention is now in session at Syracuse, N. Y., with the object of securing the recognition of the Christian religion by the United States Government.... ....A baggage car on the night express over the Texas Pacific road caught fire near Sulphur, Tex., and was entirely consumed, with 93 pieces of baggage and 50 sacks of mail... ....The bank clearance at Chicago, consisting of only five business days, aggregated $39,400,000, being the largest week's clearance for the present quarter. The country demand for money is very great, over $1,000,000 being withdrawn from that city on Saturday for country account, and fully one-half of this was sent out in gold.

Considerable feeling is manifested at Galveston, Texas at the quashing of the indictment, on a technicality, against Abe Rothschild, for murdering Bessie Moore in January, 1877, at Jefferson, Rothschild is a resident of Cincinnati.....The Secretary of the Interior has issued an order providing for an increase of 100 pupils in the number of Indian youths now educated at the Forest Grove (Oregon) Industrial school, and 50 additional at the Hampton (Va) school..... .. Senators Woodin, Pitt and Fowler, a committee appointed last Winter to investigate abuses alleged to exist in the management of the New York insane asylums, with a view of improving their administration, have begun the investigations.

The silk industry in Paterson is somewhat depressed. Most of the mills are running on short time and with a reduced force. This trade has not had a dull season before in seven or eight years, and the operatives are somewhat alarmed. The manufacturers are at a loss to account for the present dullness, as in former years they were often busy at this time in preparing for the Spring trade. An unusually abundant crop of raw silk and excessive production are the most general explanations of the falling off in the demand for silk goods. The markets are said to have been overstocked for some months, but the dealers expected to work off their large supplies in the Fall, in which they have been disappointed.

A large box was received and unpacked at the White House at Washington, on the 23d, which was found to contain a massive desk or writing table—a present from Queen Victoria to the President of the United States. It is made of live oak, and weighs 1,300 pounds; is elaborately carved, and, altogether, presents a magnificent specimen of workmanship. Upon a smooth panel is the following inscription: "Her Majesty's ship Resolute, forming part of the expedition sent in search of Sir John Franklin in 1852, was abandoned in latitude 74 deg. 41 min., longitude 101 deg. 22 min. West, on May 15, 1854. She was discovered and extricated in September, 1855, in latitude 67 deg. North, by Captain Buddington, of the United States whaler George Henry. She was purchased, fitted out and sent to England as a gift to Her Majesty Queen Victoria by the President and people of the United States, as a token of good-will and friendship. This table was made from her timbers when she was broken up, and is presented by the Queen of Great Britain and Ireland to the President of the United States as a memorial of the courtesy and loving kindness which dictated the offer of the gift of the Resolute."

Information from all business centers in the United States shows a much better condition of trade than had been looked for, and a more active movement of merchandise and a generally larger consumption of raw materials and production of manufactured goods. The exports have been lighter because needed at home, while the importations of all kinds of goods have been largely increased, and are still finding ready markets. The power of consumption has evidently increased. If no disturbance is caused from without a steady and healthy improvement may be anticipated. Such a disturbance is not likely to be excited unless it comes from the money market.

If we consult the reports in business circles, we shall find a very encouraging financial condition of the country. There was never a time before when money was so abundant; never a time when investment securities were in such demand as now, at such prices. The market is constantly feeling the effect of purchases of the best railroad stocks at prices which reduce the rate of dividend upon the investment far below six per cent. The banks are fed by a stream of foreign gold which goes far to offset the drain to the interior usual to the season. In a few weeks the money current will set back towards the seaboard, and when it comes the supply of currency bids fair to be in greater excess than has ever been the case.

[St. Paul Pioneer Press.]

What We Hate.

We hate growling, no matter the source or cause and recommend herewith the remedy. Use St. Jacobs Oil and laugh at pain. It will do the work every time.

AGRICULTURAL NEWS.

Not only has Russia begun to import grain, which until this year she has been largely exporting, but it seems she is also importing wool, hitherto one of her staple products of export. Lately a vessel arrived at Odessa with 915 bales from the Cape of Good Hope, addressed to a merchant in Moscow, and the same merchant expects to receive shortly 1,500 more bales from the same place. .....The Hares and Rabbit Bill lately passed in England, from which so much was expected in the way of relief for farmers from the nuisance of ground game, turns out to be of much less benefit than was anticipated. The Act contained too many restrictions as to the mode and time for killing the pests to be of material benefit to farmers, who have too much other work on hand to spare the necessary time to get rid of the hares and rabbits, or even to materially lessen their numbers. Game-keepers are unusually vigilant in prosecuting all who in any way violate the new rules, while magistrates seem determined to deal with offenders with unwonted severity. Then again landlords exert a good deal of pressure to render the Act void, while the pests are protected more carefully than ever on their own land, where their tenants have no right to kill them, although the pests are pretty sure to invade their crops from these places of refuge. Much grumbling among the tenants prevails, and it is not unlikely that the Act will have to be greatly modified before the farmers will derive any great benefit from it.....As a new remedy for the phylloxera, M. Poinet, in the Transactions of the Academy of Sciences, France, recommends the cultivation of wormwood in the vineyards, where it would serve as a green manure. He says that in the tracts in North America, which are covered with it, he found an entire absence of fleas, ants, worms and other insects, and he therefore thinks the phylloxera could not exist in its vicinity.....Water is reported to be exceedingly scarce through Northern and Central Illinois.....It is estimated that the actual consumption of American cotton this year will be 5,600,000 bales, supposing the trade to be moderately prosperous; but in view of the small stock on hand at the close of the season, it is thought that 6,750,000 bales will be needed to prevent scarcity, while 6,000,000 bales will not be too large an amount to prevent "corners."

The annual meeting of the Ohio State Grange will begin at Columbus Dec. 14.....Sorghum sirup is worth 40 cents a gallon in St. Louis by the car-load for pork-packing, being sweeter than N. O. molasses.....The Ill. State Hort. Soc. will meet at Warsaw Dec. 14. All invited.....The Cane Growers' Association meet in St. Louis Dec. 21 to discuss the subject of the sorghum sugar-cane industry..... ..A telegram from Melbourne, dated Nov. 6, states that the exports from Melbourne, Adelaide and Sidney to Great Britain for the month of October have been 44,000 qrs. of wheat, 6,100 tons of flour, 3,200 casks of tallow, and 106,000 bales of wool.....The extent of the cattle-grazing belt of the United States, on unsettled land, is stated to be about 2,000 miles long by 250 miles in width, and it reaches from the Rio Grande to Manitoba in Canada .....In the quarter ended June 30, 443,080 rabbit skins were exported from New Zealand, their estimated value being £3,870.

According to reports from Australia, dated Sept. 25th, the news from all the colonies were cheering. In South Australia the heavy and general rains had done an immense amount of good, and the prospects in neighboring colonies were also much brighter. The drought in New South Wales had completely broken up. In Queensland, too, the much-needed rain had fallen abundantly, and it is hoped that the agricultural and pastoral interests will have no cause for further anxiety in this respect. A heavy and continuous downpour has been experienced in all parts of Victoria; in fact, in some districts it has been rather too bountiful, causing floods and doing some little damage, but fortunately not so much as it was one time anticipated. The crops on some of the low-lying lands have suffered, and newly-planted potatoes have rotted in the ground, but the mischief wrought has been as nothing compared with the benefit which the colony generally will receive from this welcome visitation.

In Australia, in 1879, potatoes were planted on 88,000 acres and averaged 112 bushels.....Our yearly imports and exports of potatoes, ending June 30 each year, compare as follows for three years:

	Imports, bushels.	Exports, bushels.
1877-78	528,584	744,403
1878-79	3,624,149	625,842
1879-80	731,768	696,080

The imports are mostly early potatoes from the Bermuda Islands.

A beet sugar manufactory has been built at Franklin, Mass, at a cost of $126,000 which employs 80 persons and will run day and night. The beets are raised in the adjoining country and in the valley.....A St. Mary's, Canada, dealer last week shipped to this city in one shipment twenty car-loads containing 210,000 dozen or 2,520,000 eggs, valued at $37,200 .....From estimates published a few years ago by the international statistical congress in France, showing the average yield per acre of principal crops in European countries, the following is copied for the products mentioned:

	Wheat, bush.	Rye, bush.	Barley, bush.	Potatoes bush
Great Britain	29.9	34.5	39.	165.4
Austria	15.6	15.2	17.5	84.2
Hungary	12.6	18.6	14.5	137.8
Prussia	17.6	17.2	25.8	.....
Bavaria	29.2	16.9	20.9	105.
Belgium	27.9	25.4	35.1	191
France	17.1	15.8	20.8	128.
Spain	16.1	....	18.4	126

The yearly production of potatoes, the yield per acre, and the average price received by farmers throughout the country on the first of December in the years mentioned, have been as follows:

	Production, bushels.	Yield per acre.	Price, cents.
1876	124,800,000	71.6	65.6
1877	170,992,000	94.9	44.8
1878	124,027,000	69.9	58.9
1879	181,626,000	98.9	43.6
1880	168,385,000	91.4	....

Before last year prices, of course, were in greenbacks which varied in value.

The first of the Herald prophet's cold Asiatic waves, the telegram says, struck the Pacific Coast on Friday and Saturday last, bringing rain and turmoil with it. It is expected to cross the Rocky Mountains about to-day and reach the Atlantic towards the end of the week.

Is this news, or have our readers already detected the slip?—In the article on the Swedish System of Creaming in our last issue, the depth of the "cooling tanks" is given as six inches, instead of twenty-six inches as the author wrote.

For diarrhœa, dysentery, bloody-flux, cramps in stomach, and colic, whether affecting adults, children, or infants, Dr. Pierce's Compound Extract of Smart-Weed is a sovereign remedy. It is compounded from the best brandy, Jamaica ginger, smart-weed, or water-pepper, anodyne, soothing and healing gums. For colds, rheumatism, neuralgic affections, and to break up fevers and inflammatory attacks it is invaluable and should be kept in every household. Fifty cents by druggists.

The Literary Revolution.

Orders for the large type "Shakespeare" have been very heavy—strange if they had not been. Have *you* ordered it?

Five volumes large type "Library of Universal Knowledge" are now being delivered to purchasers. Volume six will be ready the first of December.

The offer of the large type "Library of Universal Knowledge," fifteen volumes complete for $11.00, terminates with December 31, the cash to be received by that date.

The announcement of our "Library of Classic Fiction" and "Acme Library of History" will both startle and please the reading public. Please take notice that the "Literary Revolution" is only getting fairly started. Save that money you were going to invest in high-priced books. The "Revolution" will give you what you want and your *money's worth*, as rapidly as the books can be manufactured.

"Young's Bible Concordance" is perhaps the most important work in religious literature which the present century has produced. It certainly is almost a necessity to every minister and to every thorough student of the Scriptures, and deserves to find a place by the side of every family Bible. It is having an immense sale.

The brilliant historical story, "Uarda," which has won a place in the esteem of readers and critics by the side of those other famous historical novels, Kingsley's "Hypatia," Bulwer's "Pompeii," Scott's "Ivanhoe" and George Eliot's "Romola," will be issued in book form December 8, in our beautiful and handy "Acme" edition, cloth bound, for the low price of 35 cents, plus 7 cents for postage.

TROPIC-FRUIT LAXATIVE removes Habitual Costiveness and all kindred complaints. It is composed entirely of concentrated fruits and medicines. Druggists sell it.

Inaction of the Kidneys and Urinary organs causes the worst of diseases which Hop Bitters cure.

ELIXIR VITÆ FOR WOMEN.— Mrs. Lydia E. Pinkham, 233 Western Avenue, Lynn, Mass., has made the discovery! Her VEGETABLE COMPOUND is a positive cure for female complaints. A line addressed to this lady will elicit all necessary information.

Burnett's Cocoaine promotes the growth of and beautifies the Hair, and renders it dark and glossy. The COCOAINE holds, in a liquid form, a large proportion of deodorized COCOANUT OIL, prepared expressly for this purpose. No other compound possesses the peculiar properties which so exactly suit the various conditions of the human hair.

The Markets.

GIST OF THE MARKETS.

DURING the week there has been a fall of from 3½ to 4½ cents per bushel in wheat at all the chief collecting centers, and a depression in nearly all other farm products also. The drop was started at Baltimore owing to the arbitrary action of the B & O. R. R. mentioned editorially last week. That disagreement has been since patched up, the owners of the stored grain having agreed to lessen the amount to 1,500,000 bushels by shipping or storing it elsewhere the railroad to pay cost of doing so, and rescinding its order for higher charges on storage. The prices in other markets sympathized with those at Baltimore, however, and the shock extended to many other products. Moreover, while early in the season the visible supply of grain was considerably less than at the corresponding dates last year, this difference has been nearly obliterated by the immense quantities lately thrown on the market, which have had a depressing effect on prices. Here is the visible supply of grain, comprising the stocks in granary at the principal points of accumulation at lake and seaboard ports, and the rail shipments from Western lake and river ports and afloat in New York canals:—

	1880. Nov. 27, bush.	1880. Nov. 20, bush.	1879. Nov. 29, bush.	1878. Nov. 30, bush.

SPECIALS FROM THE CHIEF CENTERS.

Until Saturday, Dec. 4.

Chicago.—There has been a fall in prices of nearly all farm products during the week, as may be seen by this comparison: As compared with last week, No. 2 red Winter wheat is 6c. lower; No. 2 Chicago Spring 3½c. lower for cash and proportionately for future delivery; corn, 1½c. lower for cash and 3½c. for "futures;" oats ½c. lower; rye 3½c. lower; barley 3c. lower; pork about $2 lower for cash and 60c. for January; lard 27½c. lower; hogs from $15 to $20 lower; cattle steady. WHEAT active, very weak; No. 2 red Winter $1.03, No 2 Chicago Spring $1 05¾@1.05¾ cash, $1 06¾ January, $1.07¾ February, sales at $1.06¾@1.08¾ January; No. 3 do. 88@90, rejected 65@70. CORN active but weak at 40¾ cash, 40¾ January, 45¾ May, rejected 36¾. OATS dull and weak at 32 cash, 32½ January, 36¾ May. RYE easy at 87½. BARLEY easy at $1.02. PORK unsettled but active at $1.75 cash, $13 for old cash, $11.40 December, $13 07½@13 10 January, $13 25 asked February; lard easy at $8 35 cash, $8.47½@3.50 January, $8.60 February; bulkmeats dull and weak: shoulders $4.25, short rib $6.70, short clear $7. HOGS—Market fairly active, good clearings made; mixed packing $4.20@4 50, light $4.25@4.50, choice heavy $4 65@4.85; fresh hogs, quality good. CATTLE—Market quiet and unchanged; exports scarce; butchers' firm at $2.20 @3, stockers dull at $2.40@3 20; through Texans slow, steers $2.70@2.90, cows $2 40@2 60, scalawags $2, medium and half fat shipping very much neglected. SHEEP scarce and firm.

Cincinnati.—During the past week wheat has fallen from 3½c to 4c.; No. 2 mixed corn has dropped 2c and new shelled ½c., oats, steady; rye, 1c lower; barley steady; pork has risen $1, and lard fallen 35c, other kinds of pork about steady. WHEAT—No. 2 Amber, $1 03½; Red Winter, $1.05. CORN easy; No. 2 Mixed, 48c.; new, shelled, 46½c. OATS in light demand, but holders firm; No. 2 Mixed, 37c. RYE easy; No. 2 at 99c. Barley firm; No. 2 Fall at 98c.@$1. PORK dull and nominal; new, $14. Lard dull and drooping at $8 30. Bulkmeats dull and nominal; Shoulders, 4½c; Clear-Rib, 7½c. Bacon scarce and firm; Clear Sides, 8½c. BUTTER dull; choice Western Reserve, 24@ 26c.; choice Central Ohio, 18@21½c. Hogs dull; common, $3 75@4 15; light, $4 20@4 35, packing, $4 40@4 50; butchers', $4 60@4 70.

St. Louis.—There has been a fall here, too, in most things. Since last week No. 2 red Fall wheat has dropped from 4c to 4½c for cash and futures, too; corn has gone up ½c for cash, and is about the same as the previous Saturday for "futures;" oats, steady; rye ½c lower; pork steady for futures; other pork about 40c lower; hogs about 40c lower except the best sort, which are nearly steady. WHEAT declining; No. 2 Red Fall, $1 04½ @$1 04½, cash, not worth over $1 04 at the close; $1 06¼@1 08, January; $1 02¾@1 11¾, February; $1 11⅞@1 13¾, March; No. 3 do., $1 02½@1 02¾; No. 4 do., 94@94½c. CORN 43¾@43½c., cash and December; 42½@42⅝c., January; 42⅞@43¼c., February; 43¾@44⅞c., April; 45⅝@45⅞c., May. OATS firm but slow at 33½@33½c, cash; 35½c bid, January; 35⅞c. bid, February. RYE 88½c. PORK $13 20, February; cash nominal. LARD dull at $8 25 asked, $8 15 bid. Bulk-meats lower: Shoulders, $4; Clear Rib, $6 50; Clear Sides, $6 70. Bacon dull and nominal. Hogs dull; Yorkers and Baltimores, $3 80@4 10; mixed packing, $4 25@4 50, butchers' to fancy, $4 60@4 75. CATTLE scarce and dull for low grades; shipping grades in good demand.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Dec. 4, 1880.

BEANS AND PEAS.—A good steady demand prevails for all grades of beans, particularly for the standard white sorts. The market closes firm with some advance on best marks. Green peas rather plenty as the trade is light; quoted easy at $1.70@ 1.75 for Wisconsin bbls. So. B. B. peas have advanced to $2 per 2 bush. bags, southern freight is higher.

Marrow beans prime $1.85@1.90, fair to good $1.70@1.80, medium, prime $1.57½@1.60, fair to good $1.45@1.52½, pea, $1.55@1.80, white kidney, $1.80@2.00, red do. prime $1.85@1.90, fair to good $1.65@1.75 black, or turtle soup, $1.60@1.75, lima, $4.50@5.

BEESWAX.—Small sales were at 22@24 for Western and Southern.

BUTTER.—The market retains its advanced position and some upper grades have further improved. The demand is satisfactory as the strong figures now named for strictly choice has sent a good volume of trade to next quality or good to prime stock. The weather is cold enough to give confidence to wholesale buyers and dairies have a good Winter movement. The strength of the call however comes from a steady grocery want and a steady local movement is regarded as more favorable than speculatively free purchases, as buyers for city use have a certain fault to fill. Shippers are shut out by the present rate of Western and State. Fine Western partakes of the strong feeling in table grades of State. A good deal of stored Western is offered easy.

Creamery, extra fine, 36@37c. good to prime, 33@35c; fair to good, 30@33c.; poor to fair, 22@29c.; sweet cream, 28@32c.; State entire dairies, choice, 28c.; good to prime, 26@27c.; fair to good, 24@26c.; firkins, in dairies 24@28, do. lines 22@25, pails and half tubs, choice, 31@33c, good to prime, 28@30c.; fair to good, 26@28c.; poor, 20@23c.; Welsh tubs, fall 29@30c.; fair to prime, 26@28c.; Western imitation creamery, 24 @30c.; dairy, fresh, 26@28c.; good to prime 24@26 fair to good 21@24c.; poor 16@18, factory, late made 21@ 23c.; fair to prime 15@20, poor 13@16; rolls, choice, 20@21c.; fair to good, 18@19.

Receipts for the week, 31,468 pkgs. Exports for the week, 2,356 pkgs.

CHEESE.—The market has been moderately active only this week, and supplies have accumulated

Most of the sales of prime and fancy grades have been at 12¾@13¼, with extra desirable parcels at 13. The shipments have been 26 300 boxes. Quotations are for

State factory, fancy, at 12¾@13c.; do. good and prime, 12@12¾c.; do. fair to good, at 11@12c.; do. h'f skimmed, 8¾@10c.; Wisconsin factory, fine, 12¾@12¾c. do. good to prime, 11¾@12¼c.; do. fair to good, 10¾@12c.; Ohio factory, fine, 12¼@12¾c.; do. good to prime, 11¾@12c.; do. flat, fair to good, 10@11¼c.; do. poor to fair 7@10c.

Receipts for week, 65,260 boxes.

Exports for the week, 26 000 boxes.

Liverpool cable price, 66s.

Steam for dairy products to Gt. Britain, 42s 6d.@52s. 6d.

COTTON.—There has been a fair degree of activity this week, with prices, however, generally tending lower. The latest prices are for

December at 12.03@12.04c.; January at 12.17@12.18c.; February at 12.32@12.33c.; March at 12.47@12.48c.; April at 12.60@12.62c.; May at 12.73@12.74c.; June at 12.83@12.85c.; July at 12.90@12.92c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

Receipts for week, 35,000 bales. Exports do., 14,719 bales.

DRIED FRUITS.—The market is active for all descriptions and generally strong at the slight rise in prices quoted. Latest quotations are for

Evaporated apples at 8¾@8¾c. for better qualities sliced apples at 5¾@6¼c. for good to choice North Carolina 3¾@4¼c. for V.a. apples, 4@4¼c. for Tenn. do 4¾@5¼c for State do; 3¾@3¾c. for western Ohio and Mich. Peaches at 28@30c. for evaporated peeled; 10¾@13c. for unpeeled do.; N. C. peeled at 19@21c; for the better qualities, unpeeled peaches at 6¼@7¼c. for halves and 6¼@7c. for quarters. Plums at 15@16c. Blackberries at 8c. Cherries at 18c. Raspberries at 25c. Whortleberries at 12@12½c.

Receipts for week all kinds, 4 118 pkgs

Exports for week, 5,173 bbls. of dried apples.

EGGS.—Receipts for the week, 6 063 bbls.; do last week 8,34?. Fresh eggs are very scarce from any point and the new high rates are readily obtained from special call. Limed native and firmer.

Near points 34@35 State and Pa. 30@31, Western fresh 30@31 Southern 30@31, Canadian 27@28, second grades 26@27, limed State 20@21, Western and Canadian 19@20.

FLOUR.—There has been a reaction this week to lower prices in sympathy with wheat. A very fair trade has been done,

Latest prices are: $3.45@4.25 for very inferior to fancy superfine State and Western; $4.75@5 10 for poor to choice extra State and Western, odd lots and lines; $5 10@5 25 for choice to fancy do.; inferior to good white wheat, trade and family extras, $5.10@6 00; good to choice do. at $6.00@6.65, (fancy do. up to $7;) red and amber wheat inferior to choice trade and family, at $4.30@5 35; round hoop Ohio, $5.00@5 50; and trade and family brands of do at $5.10@6.75, the latter for very choice; St. Louis at $5.10@6,00 for inferior to good extra $6.00@6 65 for good to choice and $6.75@7.00 for choice to fancy brands; Minnesota clear, inferior to very choice at $4,75@6.25; Minnesota "straight," poor to fancy, at $5 85@7.25, and patent inferior to fancy at $5.90 @8.50, unsound stock at from $3 25@5.75; city mill extra at $5 85@6.10 for fair to very choice for the West Indies; do. for England, $4.75@5.25 for poor to very choice spring wheat, and $5.25@6.00 for winter wheat product; do. trade and family extras, $6.25@ 7.85 do. for South America, $6.25@6.60, the latter for fancy; No 2 at $3 45@4 for inferior to fancy.

Receipts for week, flour, bbls. 151,670 corn meal, do. 4,360 wheat, bush. 1,769,470; corn, do. 737,532; oats do, 210,300; rye, do. 80,782. malt, do. 38,018; barley, do. 202,4 0; beans, do., 16,920; rice, pkgs 708.

Exports for week, flour, bbls. 141,850; corn meal, do. 2,760, wheat, bush 617,535; corn do. 825 643; oats, do, 3 636; peas do. 3 565; beans, pkgs. 1,545; rice, 875.

FRESH FRUITS.—Exports of apples for week 37,076 bbls The market for apples has assumed a firmness that could not have been expected had it not been for the late frost. A good many lots have been lost in bulk owing to the scarcity of empty barrels, and the consequent lack of care. Some of the frozen stock now arriving brings 50c@$1 ₱ bbl. when fairly useful. Prime nicely-kept lots very firm. The stock of cranberries has been largely broken into at an early date and the market is exceptionally strong for fine Capes. Florida oranges in good demand when choice. Pears and grapes scarce. Chestnuts are out.

Baldwins in bbls. $1.75@2.50. Greenings, $1.50@1.75, Spitzenbergs, $1.75@2; Northern Spy, $1.75@2; Choice Sweet, $1.75@2 Lady apples, poor to good, $3@5; Cranberries, Cape Cod fancy, $7@7.50; good to choice $5.75@6.75, poor to fair, $4@5.50; Cape boxes, $3@2.25; N. J, do. $1.50@1.87. Florida oranges, choice half bbl. boxes, $3.50@4; fair to good, $3@3.50. Burton box pears $3@5 Catawba grapes 15@7c. Peanuts, Va. hand-picked 4¾@5, extra prime 4@4¼, good to prime 3¾, shelled 4@4¾. Hickorynuts ₱ bush. of 50 lbs, $1.75, Butternuts, western, 50@75c. Black walnuts 50c. Pecans 8@10c.

GRAIN.—The markets for all articles have dropped back a little this week, as expected after so strong an advance as occurred. Exporters have bought a little more freely at the decline The receipts here are moderate, but the visible supply has increased, especially of wheat, the comparatively high prices naturally starting supplies forward from growers' hands. Latest sales of wheat are of:

No. 1 white at $1.19¾@1.20¼, do December at $1.19¼ @1.20, do January at $1.23@1.24¼, do. February at $1.25¾@1.25¾; No. 2 white at $1.18@1.18¾, ungraded white at $1.16@1.20¾, mixed Winter at $1 19@1.19¾, No. 1 red at $1.20¾@1.30, No. 2 red at $1.23@1.24¼, do. December at $1.23¾@1.24¾, do. January option at $1.26¾@1.28¾, do. February at $1 28¾@1.29¾, No. 3 red in lots at $1 19¾@1 0¾, ungraded red at $1.15@ 1.27¾, in bond Canada in bond at $1.18, No 2 Spring at $1.17@1.17¾. No. 3 Spring at $1.15. Corn at for New York No 2 60@60, do December at 61@61¾, do. January at 61¾@61¾, do. February at 62@62¼, do. May option quoted at 59¾ bid and 60 asked, ungraded mixed Western at 58@61¾, No. 3 at 57¾@58¾, New York steamer mixed at 58@58¾, No. 2 white at 61¾, Oats at for No 1 white 43¾@43¾. New York No. 2 white at 40¾@40¾, No. 3 white at 41¾@41¾, New York No. 1 at 40@, New York No. 2 at 41¾@45¾, do. December at 41¾, do. January at 40¾@40¾ No. 3 at 41@ 41 , ungraded white Western at 45@50, ungraded mixed Western 42@44¾, white State at 48@50¾, No. 2 Chicago quoted at 45 afloat.

HAY AND STRAW.—Demand is liberal and prices specially strong.

Selected retail State hay brings $1.25@1 40 per 100 lbs; other grades of timothy at $1.20@1.25 do, grades for railway and shipping wants at $1.05@1.10, clover mixed at 1.00, clover clear at $1, salt hay at 50@55c.; Straw—long rye, $1.05@1.10, short rye, oat, wheat and barley 60@70.

HONEY.—Market quiet but expected to revive before or by the holidays.

White clover comb single 17@19, larger pkgs. 15@16, buckwheat 12@13, extracted 7@11.

HOPS.—A very fair trade is in progress, but supplies have increased and prices have tended easier. Quotations are for

	Cents per lb.
New Yorks, crop 1880, prime and choice	22 @23
Do. medium	20 @21
New Yorks, crop 1880, low to fair	18 @19
Eastern, crop 1880	18 @22
Wisconsin, crop 1880	18 @22
Yearlings, crop 1879, choice	16 @26
Olds, all growths	4 @12
Bavarians	30 @35
Bohemians	35 @40
Pacific coast, new	20 @23

Receipts for week, 7,230 bales. Exports for week, 5,319 bales.

LEATHER.—Quotations are for light hemlock sole 22½@24, middle do at 23¾@25, heavy do at 24@25,

OIL CAKE.—Western is quoted $30.50@31.

POULTRY AND GAME.—A considerable surplus of turkeys and fowls left from Thanksgiving's receipts with later free arrivals have overstocked the market and rates are extremely low. Only bright extra fresh birds will bring the extreme. It looks like a low market for this month though the present ranges will be apt to check supplies. Geese and ducks sell better than for several former seasons.

Turkeys, N. J. choice, 10@11, State do. 9@9½c, good to prime 8@9, Western, choice, 8@8½, good to prime 7½@8, fair to good 7@7½. Phila., dry-picked, 14@12, Chickens, do., 11@12½c.; Bucks Co. 10@12c.; N. J. 10@ 11c.; State scalded, 9@10c.; Western, do., 7@8c.; poor to fair 5@6c. Fowls, Phila, dry-picked, 10; N. J., 9@ 10c; scalded, do 9@10c.; State and Western prime, 8½@9c.; poor to fair 5@6. Ducks, choice 10@12c.; state and N. J. 10@11c.; Western, poor to good 6@9c.; Geese, choice 10@11c.; other, 8@9.. Squabs, light ₱ doz. $1.75; dark $1.

Live poultry has only a chance sale with dressed quoted down.

Fowls and chickens 6@8c. roosters 3@4.; turkeys 7@9. Ducks choice 65@75 other 40@60. Geese extra $1.75@2 other $1.00@1.50 pigeons 20@25.

There has been a decided drop in prices for all birds except choice wild ducks. Small birds and rabbits are very plenty, Perhaps dealers have made the mistake of trying to establish the rules of the holiday week.

Wild ducks, canvas back $1.25@1.75, the latter for Havre de Grace; red heads 50@75c mallard 50@60, teal, 30@50c, the latter for blue-winged; common 25@30c.; prime trapped ₱ doz 50@$1; poor 30c partridge, 40@50 the latter for State, Grouse, prime, ₱ pair $1 drawn, 60@80c. Hares, 35@40c; Rabbits, 20@ 25c.; Venison, Minn. short saddle, 15@16c.; other 12 @14½c. Whole deer, 9@10.

PROVISIONS.—Hog products have been less active and tending lower.

Mess pork quoted at $14 25 for old and $15.25 for new for export. Bacon at 7.50 for long clear, 7¾ for short clear. Beef—Extra India mess quoted at $18 @20 for city; $9.50 for extra mess, and $8.50 for plain mess; and $13@13.25 for family mess. Beef hams at $17 25@17 50. Lard, Western steam at $8.37½ for spot lots, $8.90 for December, $8 95@8.97½ for January and $9 for February, Stearine at 9¾ for choice. Tallow at 6¾ for prime.

Receipts for week, beef, bbls. and tcs.: 1,196; pork, 16,800 bbls.; cut meats, 53,575 pkgs.; lard, 42 300 pkgs.

Exports for week, beef, bbls. and tcs. 2,536; pork, 5,395 bbls.; cutmeats, 14,785,502 lbs.; lard, 5,515,300 lbs.

SEED Clover is in demand and firm at 8¼@9. Timothy is quiet at $2.75@2.85. Receipts for week, 3,094 bushels.

TOBACCO.—A very fair trade has been done and the market is strong.

VEGETABLES.—Exports of potatoes for week, 8,700 bbls. The market is firm with checked supplies and very fancy Rose and Snowflake are held a shade above quotations onions are quiet, high prices reducing the demand. Other items steady.

Potatoes, E. Rose Eastern double heads $1.75@2, State $1 75@1 87, do. in bulk $1 62@1.75 Burbank and prolific $1.50@1.75; snowflake $1.75@1 87; do. in bulk $1.65@1.75; peerless, state, $1.25@1.50; do. N. J. $1 12@ 1.37; peachblows $1.87@2 Sweet potatoes, Del. $2.50 do. Virginia $1.25@1.50. Onions, white, $5@5.50 yellow, $3.25@3.50; red, $3 25@3.50; Chester, $3.25@3.50, beets, 75@87, carrots, $1@1.25; marrow squash 40@50; Hubbard, 75c.@$1; cauliflower, $1@3; cabbage, ₱ 100, $3@6; pumpkins, $4@8 celery, per dozen, $1@1.50, turnips white, 50@62.

WOOL.—Trade has been brisk this week and while no further advance has been made no difficulty was experienced in maintaining strong prices. Latest sales are of

X and XX. Ohio fleeces at 48@50, medium do. at 48½ @50; Mich. fleeces at 45, State fleeces at 42@.

LIVE STOCK MARKETS

NEW YORK, Saturday, Dec. 4, 1880.

BEEVES.—Receipts for the week 12,081 head: do. last week, 13,293 do. With light receipts the market has had a very satisfactory run all the week. Heavy supplies however are not needed. Quite a number of thin natives are included in the receipts. A car load of fancy Ky. steers sold at 12. to dress 58 lbs, prime to medium steers ranged at 7@8¾, to dress 55@ 56lbs, fair to good 8¾@9¼, to dress 56 lbs, prime to choice 10@11. to dress 57 lbs, extra 11¼@12.

SHEEP AND LAMBS.—Receipts for week, 31,528 head; do. last week, 22,471 do. Demand light and prices more or less irregular. Poor Texas sold at 2¾, choice Ohio wethers 6¼, general sales are 4@4¾. lambs 5@6.

VEAL CALVES.—The demand has been small and prices are low, Cheap poultry has some effect upon small meat.

Live calves, N. J., prime 7¼, State, prime 7, fair to good 6@6½, Mt. Holly, heavy, 4@5, medium to light 6 @7¼, buttermilk, 2½@3, grassers, 2@2¼c.; dressed calves, choice 9@9¼, fair to prime 7@8½, common, 3@5.

MILCH COWS.—Receipts are very small and former prices are sustained. A fair range for common useful to good $30@45, choice $50.

SWINE.—Receipts for the week, 48,823 head: do. last week, 43,765 do. Good city dressed compete with country pork and State and N. J. is lower. Live hogs about steady for choice, under grades dull.

NURSERY PUBLISHING CO.,

36 Bromfield St., Boston, Mass.

BEAUTIFUL BOOKS.

Home, Sweet Home! By JOHN HOWARD PAYNE. With full-page and letter-press Illustrations, from designs by Miss L. B. HUMPHREY, engraved by ANDREW, and forming the seventh volume in our series of

ILLUSTRATED HYMNS AND SONGS.

Oh! Why should the Spirit of Mortal be Proud?
Nearer, My God, to Thee. Rock of Ages.
Abide with Me. The Vagabonds.
The Breaking Waves Dashed High.

Small 4to. Cloth, Full Gilt—Price $1.50 each

The form and size of these books, the purity of the tint, and the clearness of the letter-press, make the volumes valuable and beautiful gifts. The hymns and songs are too well known to need any words of praise.—*Journal.*

Gems of Genius. STORIES OF PAINTERS AND PICTURES. By HARRY W. FRENCH. Embellished with 50 full-page Illustrations. Cloth, full gilt, $3.00

From the most popular studies of Europe of the last generation, a selection has been made for this elegant volume The artists are well known as modern masters, and their works celebrated as victories in art; but there are interesting stories wrought upon the canvases, and interesting struggles in the lives of those who through them gained their greatness, that may not appear to the simply critical observer. No pains have been spared to make this volume briefly complete in this one particular, in the belief that a social familiarity with great artists and their work is the surest way to gain from them instruction, enjoyment, and inspiration.

BALLADS OF BRAVERY,
BALLADS OF BEAUTY,
BALLADS OF HOME.

Edited by GEORGE M. BAKER. Each volume is embellished with forty full page illustrations, and richly bound in cloth, full gilt and colors Price, $2.50 each.

"You who collect beneath the roof of the old homestead, or in your own cosy parlors while away the jolly Christmas hours, can give to your absent loved ones a token of your tender remembrance of them in no better way than to send them a copy of "Ballads of Home." The poems of these collections are those that sing of old times, of war times, of court times, of Christmas times. They tell the sweet story; and to the hearts off there away from you they will tell also a story of how faithfully you have called them to mind."—*Golden Rule.*

Drifting Round the World. A Boy's Adventures by Sea and Land. By Capt. CHAS. W. HALL, author of "The Great Bonanza," "Adrift in the Ice-Fields," etc. 8vo, illuminated sides, $1.50; cloth, $2.50.

A book of mammoth proportions, with 200 illustrations. In this long journey, devious and broken by various accidents, the reader is introduced to new and striking scenery and to peoples little known and seldom described in modern literature. The author has not aimed to produce sensational effects; but rather to furnish true pictures of actual things, and to so supply knowledge, as well as to minister to the pleasures of the imagination. It is a book all young readers will be pleased with, and so instructive that parents and guardians will favor its introduction among the young folks."

For sale by all Booksellers, or sent by mail on receipt of price. Our Illustrated Holiday Catalogue mailed to any address on receipt of six cents in postage stamps, or our complete Catalogue, without illustrations sent free on application.

HOME AND FARM

FREE FOR ONE YEAR!

GIVEN AWAY to Every Yearly Subscriber to The

Two Good Papers for the Price of One!

CRICKET ON THE HEARTH

By special arrangement with the publishers of that well-known and very popular Family Journal, the HOME AND FARM, of Louisville, Ky., we are enabled to offer it for *one year*, as a **free premium gift**, to everybody who will send us **$1.00** for a year's subscription to THE CRICKET ON THE HEARTH for 1881. The HOME AND FARM is an 8-page, 56-column, semi-monthly, Agricultural and Home paper, (size of N. Y. Ledger.) Although published but once in two weeks each number will be found so interesting that you will be well repaid for waiting that length of time for it. It is strictly a first-class Agricultural paper, and each issue contains a great variety of entertaining and valuable reading matter suitable for every farmer and every farmer's family. THE CRICKET ON THE HEARTH, the People's Favorite Literary and Family Journal, is a mammoth 16-page, 64-column, illustrated paper, (size of Harper's Weekly,) filled with bright and sparkling Serial and Short Stories, Sketches, Poems, Useful Knowledge, etc.,—the largest, handsomest and best dollar publication in America. The offer we herewith make, to send *both* of these splendid family papers to any address for one year, post-paid, for **only $1.00**, (the price of the CRICKET alone,) is the most liberal one ever made by a reliable publishing house, and we defy any one to equal it. Everybody in search of a variety of good reading matter for the coming year, at a remarkably low price, should take immediate advantage of it. The general make-up and character of the two papers is entirely unlike, one being Literary and the other Agricultural—each the *very best* of its kind—making this combination the most attractive one ever offered to the public, and at a price which places it within the reach of all. If desired, the papers will be sent to different addresses. We will accept postage stamps in payment for subscriptions. *Subscribe at once!* This great offer will not be repeated. Make up clubs An extra copy of *both* papers, one year *free*, to any one sending us a club of five subscribers, and $5.00. As to our reliability, we take pleasure in referring to any publisher in New York. *Mention this paper.* Address MOORE & WILSON, Publishers, 245 Broadway, New York.

Reading for the Young.

FARMING FOR BOYS AND GIRLS.—NO. 6.

HENRY STEWART.

Preparation of the Soil.

It has been said, "As a man sows, so shall he reap." This is true in every sense in which it can be used, and it applies in the most forcible way to the manner of preparing the soil for sowing the seed. This work needs to be done most carefully, that the seed cast into the soil may be able to receive the utmost benefit from the soil itself, as well as from the water, air, light, and heat, which all exert so great an influence upon it. The first work in preparing soil for the seed is to plow it. The modern plow is constructed upon truly scientific principles—by which is meant that it is not

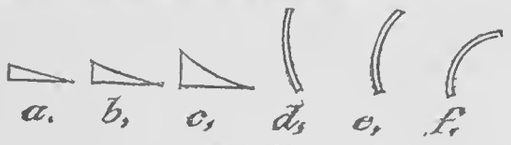

FIG. 437.

made by guess-work, but is shaped in conformity with certain well-known rules and principles of mechanics, so as to use the force applied to it in the best and most effective and economical manner. It is necessary for the young farmer to understand these principles, and why plows are shaped as they are, because he can then use them much better and do better work with them than if he knew nothing about it. The work of the plow is to turn over the soil so that a fresh portion may be brought up and exposed to the air, and the manure, weeds, sod or stubble may be covered up, and also to break up and loosen the soil. That the latter part of the work be well done is very important; and a well-made plow in the hands of a good plowman does this work better than it can be done in any other manner, better even than it can be done with a spade. The plow also cuts out the furrow slice as well as turns it over; it therefore requires, for easy work, to have a sharp edge and the general form of a wedge. To turn over the soil, the surface of this wedge is required to be curved or rounded and hollow, so that when the furrow slice is cut loose it is lifted and turned partly over, and in the bending the slice of soil is broken loose, crumbles and falls apart. The following illustrations show how this useful work is done. At figure 437 is shown the form of the plowshare and the mold-board as if the plant were cut across in several places from the middle of the share to the end of the mold-board. When the share at *a* enters the soil, it first cuts the ground loose and lifts it a little.

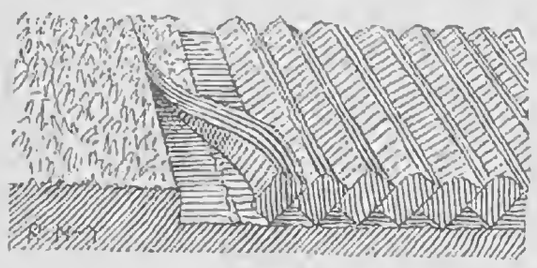

FIG. 438.

When the furrow slice is pushed along the plow share to *b*, it is lifted still more and begins to bend and turn at *c*. When it comes on to the mold-board at *d* it is nearly on edge; at *e* it is bent so much that the soil crumbles and the slice falls apart, unless it is very tough; and at *f* the furrow slice is turned over so that it falls into the position shown at fig. 438. This illustration shows how the furrows lap and lie, one upon another. By using a differently shaped mold board the furrow slices may be laid flat, and for some purposes this is done, but what useful purpose is served by it that is not done by lap furrowing, does not seem very clear. In making lap furrows, the top soil and any manure or other useful matter that may be upon it, are placed in the best possible position to be mixed with the soil. This is easily seen by referring to fig. 439. This is intended to represent the surface of a field that has been manured. As the furrow slices are turned over on their edges, the top soil, and the manure, which is shown by the dark lines, lie between the slices from the bottom to the top, except where they are covered with a little of the loose, broken soil which falls into the

FIG. 439.

new furrows. When the harrow is drawn across these furrows, the teeth will mix the soil and manure together very completely. But, although this may not be done, when the seed is sown it falls into the small furrows and is covered by the soil from the edges, as the harrow passes over them. The roots of the young plants find a supply of manure to feed upon directly in their way as they go down into the soil and as they go still further down, they find more food ready for them. As the fullest growth of the crop is the object sought by the farmer, this manner of plowing is then seen to be precisely what he requires to gain his object. A little observation, thought and study may very easily explain such matters as this to the young farmer, so that he may not only know what he works for, but why he does this or that, and how his work should be done to make it more profitable for him. The plow crumbles and loosens the soil and makes it mellow; this is necessary to make a soft bed for the seed in which the young roots may easily force themselves in their search for food.

At figure 440 is shown the effect of good plowing upon the soil, in which the furrows are straight and even in width and depth. In this case every part of the soil is turned; the surface of the field is raised evenly, and if one should push a stick into the soil at several places, he would find everywhere the same depth of the same soft, mellow soil. But let a man or boy handle the plow without care; let him permit it to sway to this side or the other; to run out of the ground in places; and to make the furrows crooked; the effect would be just like that shown at figure 441, in which the (light), soft upper soil rests upon a very uneven, (dark) sub-soil, and if one tries to push a stick into

FIG. 440.

the ground, he finds a hard bottom very close to the surface in many places. The consequence would be that the seed might sprout, but the plants would be very poor and weak, or would die for want of soil to grow in and because they could not enter the hard soil to find food. Besides, as the air and the warmth of the sun could not penetrate this hard soil, these could not serve their purpose in preparing food for the young plants, and the plants would starve; and when the sun's heat becomes fierce in the Summer time, this shallow soil would dry out and the crop would perish. Thus poor work gets poor pay, and it is only good work that is well paid for; for we see

FIG. 441.

that nature herself refuses to help those who will not, or do not, help themselves, by doing their work well.

PREMIUMS.

DEAR UNCLE MARK:—What premiums may I have for getting new subscribers to the RURAL?

Monticello, Iowa. H. P. T.

[We have had inquiries similar to this several times of late, and have concluded to make one answer which will cover them all at this time. The cousins may, of course, work for any of the premiums offered in our premium list as published in the Fair number, or we will furnish an extra copy of the RURAL for every seven new subscribers.

We have also selected as of special interest to the young the articles illustrated on this page. For the young ladies we have five varieties of albums, given for clubs of eight, eleven or eighteen names. Also books from the house of Lee & Shephard, counting each subscriber as 50 cents.

Fig. 442, is a Monitor clock. Our illustration is about a quarter of the size of the clock. The Monitor is an accurate time-piece, and an alarm and a daily calendar in addition. The *white* dial is 3¾ inches in diameter; the clock is wound, set and regulated at the back, and the admirable "movement" is inclosed in a seamless copper case, that is stamped out and heavily nickel-plated. A club of 7 secures the "Monitor."

FIG. 442.

This cut, Fig. 443, is a boy's express wagon, constructed with iron axles and heavy welded tire wheels. It is 16x33 inch body, has good-sized wheels and the front ones turn under the box; is

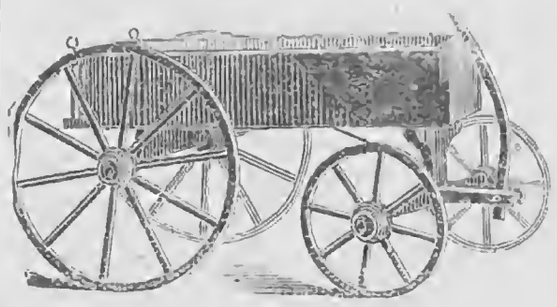

FIG. 443.

well made throughout, which of course, combines strength. The possession of one of these satisfies many a boy's ambition. It is a toy which is both useful and amusing. Price $5. This wagon is given for a club of 12 subscribers.

Fig. 444 is a velocipede, suitable for boys from the ages of 6 to 9. Its front wheel is 22 inches and has an iron hub; the wheels are oval tired and

FIG. 444.

the handles tipped. It is upholstered with a finely-stitched leather saddle, with wood parts painted and ornamented. Exert yourself to obtain the needed number of subscriptions. Price $6. Given for 14 subscribers.

Fig. 445 is a pocket knife as here shown. The engraving shows the parts of the knife, except the very effective screw-driver hidden by the opened

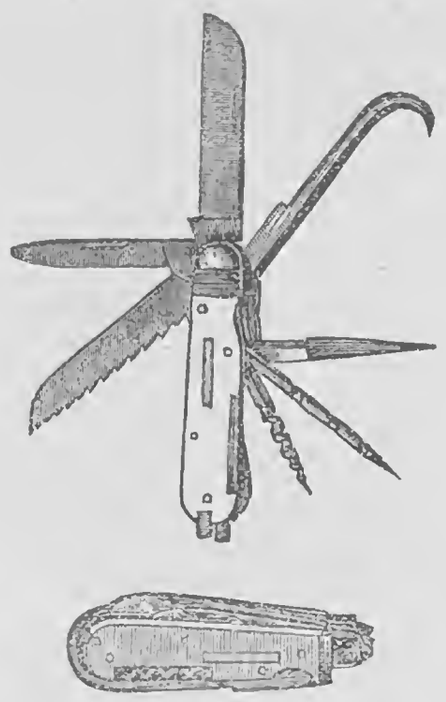

FIG 445.

large blade. All inclosed in a compact white handle, the whole weighing only two ounces. This knife is given for a club of 8.

THE OLD FARM-HOUSE.

"NURSE, tell me once more, please; then I will shut my eyes and try to sleep."

So nurse told the good news again. Next day they were all to go to grandpa's. "Where the ducks are?" cried Mollie.

"Yes, the ducks, the brook, and the old farm-house, the horse and carriage, and ever so many good things," said nurse.

"Will mamma let me wade in the brook? I must ask her before I can get a wink of sleep."

Mamma was busy packing. She brushed away some tears when she heard little feet along the hall. Mollie forgot the fun in a moment: "Mamma is thinking about little Allie in heaven—how she is not here to go to grandpa's."

Then Mollie clapped her hands and cried, "Let us take the lame girl; her mother has no money to send her to the country. Would not this please Allie if she could look down!"

So the poor little lame girl had a good time at the farm.

Though Allie might not know, we are sure Jesus was pleased with love shown to one of his dear children.—Sunbeam.

A good excuse for sickness or yourself and family is that you don't use Hop Bitters.

The Puzzler.

HIDDEN BUSINESS MEN.

PERSONAL ITEMS.

The Emperor of Austria is called "The Good." He is very liberal.

The estate of the late Governor Williams, of Indiana, is estimated to be worth $100,000, $75,000 of which is invested in farming lands.

Congressman Alexander H. Stephens is suffering from dyspepsia even more than is usual for him. The very lightest food is hard for him to digest.

Jim Mace, the once well-known English pugilist, is keeping a hotel in Melbourne. He is said to have become a "model moral man," and is, moreover, making money fast.

Colonel Fair, of Pacific coast fame, had a narrow escape from death a few days ago. He was inspecting a drift when the earth caved, fatally injuring a miner who accompanied him on the trip of inspection.

P. T. Barnum, the famous showman, has been seriously ill in New York city for over a week, suffering much agony from an obstruction of the intestines. His condition for several days was critical, but he is now thought to be out of danger.

The people of Turin are very fond of the Queen of Italy. She has no guard of soldiers when she arrives in that city. Her smile is everywhere welcomed with cheers from an admiring populace in Italy. The Marguerite has become the national flower. The King of Italy is grave, thin and haggard.

President Hayes has written his message; but he does not wish to have it put into type for fear that some one may wish to print it before Congress meets. At least that is the story now afloat at Washington. The manuscript is kept carefully guarded; and two sentries who went to sleep over it have been relieved.

Count de Chambord, whom the French Legitimists consider the rightful King of France, although in his 61st year, and suffering from a slight halt in his gait, owing to a fall from his horse in early youth, still takes delight in all field sports, and follows the chase with the ardor of his ancestors. At Frohsdorf, his residence, the "royal hunt" is maintained with great ceremony, the only evidence which recalls the memory of the court splendors of Versailles and Fontainbleau.

General Longstreet, our Minister to Turkey, was President Hayes' choice for Postmaster General, but it was thought that he might have trouble in being confirmed by the Senate. The General by the way, is not a man who can keep money. When he had a yearly income of $10,000 in Louisiana, he gave most of it to his old soldiers, one of whom during the September riots in New Orleans drew a bead on Longstreet three times with his rifle, but had not the heart to shoot his old commander.

[Cleveland, (Ohio) Herald.]

A Hammock's Wild Way.

An Illinois exchange feels called to thus deliver itself: "His hammock swung loose at the sport of the wind," and tumbled the Hon. J. S. Irwin on his head, and but for the application of St. Jacobs Oil, he might have gone "where the woodbine twineth." Even so dear *Beacon* as many others have gone, who failing to use the Great German Remedy in time, for their rheumatism and other dangerous diseases, "have paid the debt of Nature." Rub is our motto.

PIANIST'S ALBUM. 102 pieces. Fine collection.

All the books above named are alike in size, style, binding and price.

OLIVER DITSON & CO., Boston.

C. H. Ditson & Co., 843 Broadway, New York. **J. E. Ditson & Co.** 1228 Chestnut St., Phila.

FARMERS are MAKING $25 to $50 per week selling **MANNING'S ILLUSTRATED STOCK BOOK**

Because **every farmer actually needs it.** It is the **latest, largest,** and most **complete** work ever issued in America treating of *Horses, Cattle, Sheep, Swine* and *Poultry*—their breeds, breeding, training, care, and management; their diseases, causes, prevention, symptoms, and remedies. **1000** pages, **400** illustrations, and 2 *superb charts.* **Anyone** desiring *profitable* work during the winter should send *at once,* for *illustrated* circular and **full** particulars. Address HUBBARD BROS., Pubs., 723 Chestnut St., Phila., Pa.

THE request often made by publishers that readers will mention their journals when answering advertisements, seems to us a very reasonable one. Such mention is a helpful and friendly act to the journal mentioned and enables the advertiser to determine which journals are the best advertising mediums. Reference to our advertising columns will show there is not one advertisement of an exceptional or ambiguous character admitted. In so far as this is possible we hold ourselves responsible for their high-standing and trustworthiness.

Miscellaneous.

DOGS OF THE MUNICIPALITY.

I. THE BRAVE DOOR-KEEPER.—Newly he comes, bravely to his post—"Officious and not valiant."—*Coriolanus, Act* 1, *Scene* 8.

Humorous.

GRACIE'S first experience in eating a peach: "I've eaten it cloth and all, mamma; now what shall I do with the bone?"

"BRIDGET, the dust upon the furniture is intolerable. What shall I do?" "Do as I do, marm, pay no attention to it."

"MY son," said an anxious father, "what makes you chew that nasty tobacco?" The boy, declining to consider the question in the spirit in which it was asked, replied, "To get the juice."

"I HAVE no patience with a man who can't remember a thing no longer than it's being told him," exclaimed Jones, impatiently: "Now I can carry a thing in my mind a month, if need be." "You're a lucky dog, Jones," remarked Pendergrast, quietly; "it isn't everybody that has so much room in his mind as you have, you know."

The Folly

Of using mere stimulants finds its punishment in headaches and disorders of the stomach, complaints which Hostetter's Stomach Bitters is admirably calculated to remedy. This sterling tonic and regulating medicine invigorates the stomach without exciting it; tranquilizes the nerves, by restoring vigor to the organs most closely in sympathy with them, namely, the gastric organs, liver and bowels. A healthful impulse given to digestion is often the means of preventing serious and aggravated physical disturbance, and, there are many preparations which are advertised and recommended for this purpose, but among modern remedies none has achieved such a wide-spread and well earned reputation as the article referred to. Physicians of eminence prescribe it, and the concurrent testimony of respectable persons of all classes and avocations, proves that it is every way worthy of the confidence generally reposed in it.

The Herdsman.

SHORT-HORN BULL, BARON HILLHURST, 22,028.

In continuing our portraits of prize animals of the Albany show, we present this week an excellent picture of the 1st prize Short-horn bull, Baron Hillhurst, 22,028, exhibited by the president of the society, Gen. N. M. Curtis, Ogdensburg, New York. The Baron is an exceedingly stylish and handsome bull six years old, and he attracted more attention at the fair than any other animal. It is difficult to describe so well formed a bull. Ordinarily one may exercise his skill in passing lightly over imperfections, and dwelling especially upon excellencies; but in the case of Baron Hillhurst, the most critical may study him long without finding much fault.

His head is fine, with a handsome muzzle and a large gentle and beautiful eye, and medium, waxy well-shaped horn. He is level above and below, with deep brisket, wide loin and low in twist and flank. He is thick through the heart, with well sprung ribs and great capacity of barrel. A more upheaded, stylish bull one seldom sees, or one of so docile and gentle a disposition, and though weighing, in low flesh, 2,200 pounds, he is active, vigorous, "good on his pins" and as quick as a yearling. Notwithstanding he is so generally excellent, as a handler he is most extraordinary, his skin being mellow and unctuous, elastic and yielding to an extent that delights butchers and feeders, and all others of educated "touch," and this evidence of quality is hightened by his silky and glossy coat of fine hair. In color he is almost entirely red with few white spots, as seen in the engraving. His blood on the dam's side is traced through the Lady Mary's to Imported Red Rose 2d, and thence back to Princess by Favorite. His sire was sold at Col. King's sale in Chicago, May 1874, for $14,000, and subsequently went to England.

This noble animal stands at the head of Gen. Curtis's fine herd which is rich in Princess and Duchess blood.

BREEDING PURE-BRED STOCK.

F. K. MORELAND.

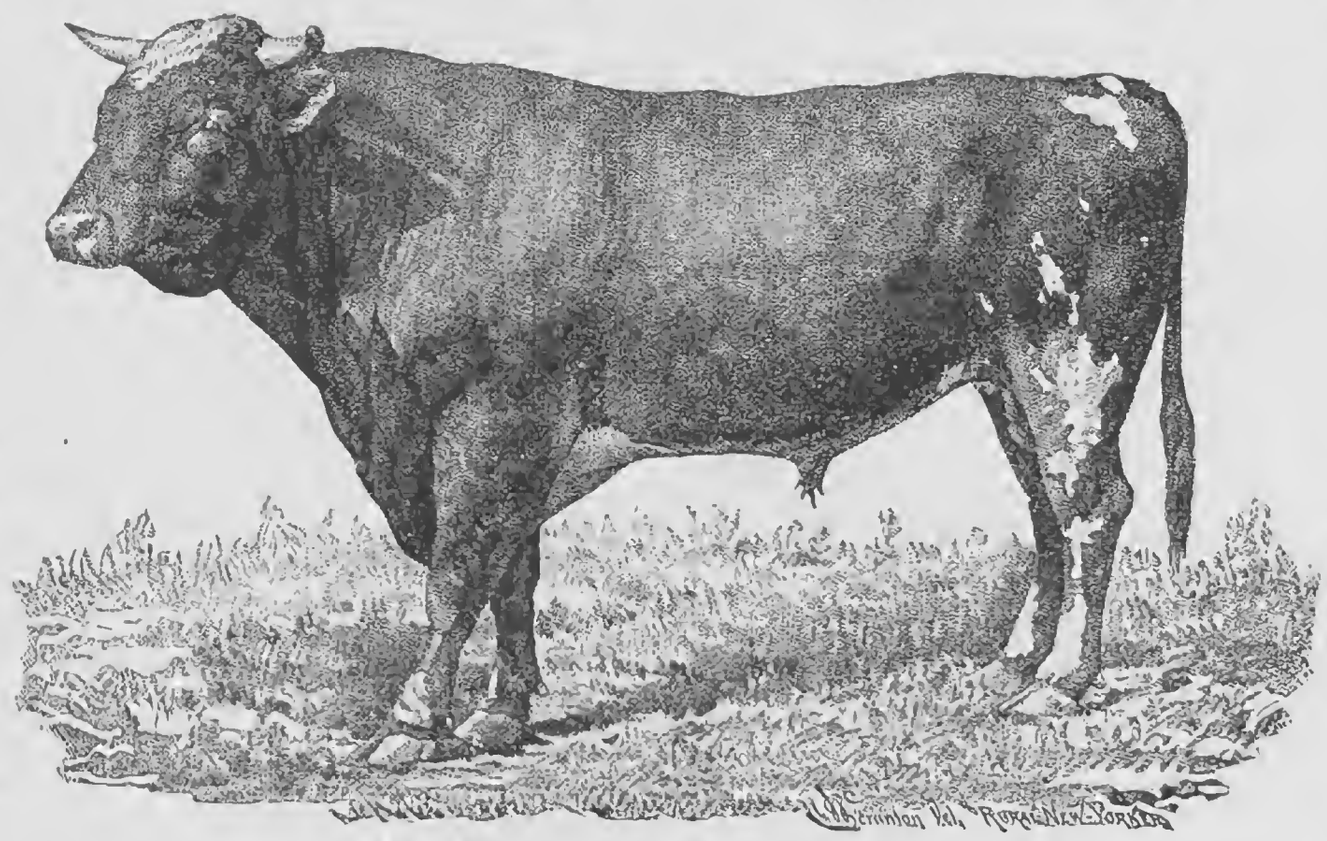
Success in breeding depends, first, upon shrewdness in selecting the best stock to breed from, and, second, upon good judgment in feeding, and I may add right here that this "second" is a very important matter. A man with unlimited wealth may purchase a fine thoroughbred colt or a Short-horn or Jersey calf and pay therefor a fancy price, and after twelvemonths' feeding turn out the veriest scrub ever bred on a dunghill. Such a man, were he a millionaire, could never become a successful breeder. Thousands of dollars are invested year after year in fancy stock, and judiciously invested, for which no adequate return is ever received, and the losers never learn that the fault lies wholly in their feeding or rather their lack of feeding. I have myself sold thoroughbred calves to farmers at good prices and been deeply chagrined to have those calves fed on whey, thus not only ruining the stock, but injuring me much more than it did the purchasers, for they lost only what they paid me, but I lost other customers who would probably have treated my stock in the same way—although I have grave doubts whether that was more loss than gain. Farmers too often think that they can pay $50 for a calf and let it feed at the same manger with calves worth only $5 per head, and thus rear a cow worth $200 or $300; but it can't be done. An uninterrupted list of failures on the part of every farmer who has attempted it proves the truth of my assertion.

I have stated that for breeding, the best stock must be selected in order to insure success. In order to obtain really good stock high prices must be paid; but the converse of this proposition is not always true—a really good animal is not always the result of having paid a high price therefor. It follows, therefore, that in selecting breeding stock a man must have some stock education; he must know something about that particular animal; he must be able from his own personal judgment to examine the animal he wishes to purchase critically, to discover the weak points of the individual as well as the more perfect characteristics. The value of pedigrees must not be ignored, if pedigree stock is what is to be bred. The value of a pedigree animal depends very materially upon certain desirable or undesirable crosses. A breeder should be thoroughly posted upon all the literature connected with the stock he breeds or intends to breed. There are certain animals or families that make desirable and valuable crosses. A man should have a certain well defined object in selecting breeding animals. The object he wishes to accomplish by breeding stock should be clearly defined in his own mind, and he should select his stock with reference to that particular object. If a male is to be selected, he should be closely studied and also the stock upon which he is to be used, and he should be selected with special reference to the object to be accomplished by using that male upon that particular class of female stock.

No farmer should be so insane as to use a grade or native male upon any stock with the object of improving it, no matter how inferior such stock may be or how perfect the male may be. The result of such a course will nearly always be that the progeny are of the same kind as their parents, or have advanced backwards. I have been frequently annoyed, when talking to my brother farmers, to have them point out for my inspection and commendation some miserably inferior scrub bull calf or buck lamb which was being reared for use upon the rest of the herd or flock. No possible success can attend such a course. Another prolific cause of failures with beginners is this—they start all right and attend to their stock intelligently for a few years, and then they become careless, line fences become defective and some neighbor's scrub bull gets in with the herd of Jerseys or Ayrshires and is suffered to remain for a few days, and incalculable damage is done and the breeder becomes discouraged. I can recall to mind numerous instances of just such failure. It may be a flock of thoroughbred sheep that have been brought up to a perfect condition of quality and have been allowed to stray away, or some scrub ram of the scrubbiest character has been allowed access to them, and the labor of years has come to nothing. All these small things must be guarded against most jealously. Now, if you are breeding fine stock, you are at least breeding stock that is worth feeding and deserving of a comfortable shelter in inclement weather, and do not by any means keep stock that is not worth food and shelter. You can not afford to pay high prices for stock and starve them six months of the year and freeze them the other six.

Does the breeding of thoroughbred stock pay? I answer yes; when conducted judiciously it pays well. There is no other branch of business that will return such large profits. Good males of the different breeds of sheep are always in demand for crossing upon common stock. And raising pure-bred sheep for this purpose is especially profitable. There is a growing demand for Ayrshire and Jersey stock for dairy purposes, and those who think they cannot afford to invest a large amount of capital in this branch of business, yet feel disposed to raise grade stock for their own use. This desire to improve farm stock will increase faster than the supply, and those who breed this class of stock for sale will find it easier to sell them, and prices will be much better than formerly. It seems to me that shrewd farmers will take advantage of this means of securing success and wealth in their calling.

St. Lawrence, Co., N. Y.



BARON HILLHURST 22,028—From Life.—Fig. 446.

A Very Old Cow and a Great Breeder.

A writer in the English Agricultural Gazette asks, "Can any Short-horn breeder give evidence of a cow breeding until 33 years old, and having produced 31 calves, having had twins on two separate occasions? Her whole family were proportionally long-lived, the bulls being serviceable until 15 and 16 years old."

The writer was talking of Hereford cattle, but whether he meant to say that the above cow was of this breed, we are at a loss to determine. She is the most extraordinary cow we ever heard of. We have known Short-horn cows to breed well till past 20 years old, producing 15 to 17 calves each, the bulls being still good getters after 13 years old; but such are rare nowadays, owing entirely, we think, to their being so highly fed and forced at an early age. If they were allowed to grow up more slowly and naturally, they would last years longer.

A common, or what is called a *scrub* cow, belonging to Judge Payne, of Milan, Missouri, according to the St. Louis Journal of Agriculture, 14 years old, at nine calvings has dropped 23 calves. If she keeps on at this rate a few years longer she will more than rival the English cow above, at least in the number of her calves, if not in years. One steer and three heifers dropped by this cow on the 26th of June 1876, weighed on the same day in June 1880, 1,700, 1,704, 1,574 and 1,536 pounds, altogether 6,514 pounds. In June 1878, the cow dropped three heifer calves, which themselves calved before two years old, namely, in March, April and May 1880, and all have proved good milkers.

In August of the present year, this same cow dropped four calves—one bull and three heifers. If any one can inform us of a cow that has equaled this at 14 years old, we shall be glad to hear from him.

Close Breeding—Questioning "Stockman."

In the Rural for Nov. 20th, page 768, in Notes by a "Stockman," I notice the following: "The great bugbear of farmers in this business is close breeding. A farmer who was discussing this question with me recently, seemed to think what he called incestuous breeding of animals was a crime, an unnatural and reprehensible proceeding. He had never heard or known how our best stock has been bred, and how closely the most successful breeders have kept to one blood Mr. Bates never hesitated to use the same bull on mother, daughter, and grand-daughter, when the animal suited him. This was his great principle in breeding, and he once remarked that it was by keeping to this rule that his success had been entirely won."

I suppose "Stockman" had reference to Thomas Bates, who bought his first Duchess of Mr. C. Collings, in 1804, and a two-year-old heifer called Duchess 1st, of the same gentleman in 1810, and probably this family was bred in the manner "Stockman" advises; that is by close, or in-and-in breeding to as great an extent as Mr. Bates ever bred from. Now, what I wish to ask "Stockman" is this: if Mr. Bates was so successful in his breeding, how many, and where are the descendants of Duchess of 1804, and of Duchess 1st of 1810, at this date? Will "Stockman" answer; then farmers of the present time can judge whether or not there is as much success in close breeding as "Stockman" seems to think, and whether Mr. Bates did prove that close breeding was productive of fine, healthy animals, that were prolific breeders, or whether they have become nearly worthless for breeding purposes, in consequence of such close breeding.

JONATHAN TALCOTT.

NOTES BY A STOCKMAN.

Some time ago I referred to the Hamiltons of Kentucky, as the larges breeders of Short-horns in America, if not in the world. At a sale recently held in Kansas City these gentlemen sold 140 Short-horn calves at an average of $115 per head, a pretty large draft from one herd, and a pretty good price for calves. And yet, doubtless every purchaser will find his profit in his purchase.

Old things become new. The old story current years ago about a heifer, which, having

lost its leg by accident, was provided with a wooden one on which it moves about with ease, is again reappearing. That heifer ought to be an old cow now. But the moral will always be good for use, which is, do not destroy any animal that may break a limb, nor too hastily remove a broken limb, even to fit on a wooden one, for by means of plaster-of-Paris and some bagging strips, the limb may be set and supported until the fractured bone unites again. The strips are dipped in the moistened plaster, made into a thin paste; wrapped around the prepared limb above and below the fracture, until a stiff bandage is made, which, as it sets very rapidly, holds the limb so that it cannot be moved.

Which reminds me that, having a careless man, who would never let the bars down when driving sheep and cattle out of a field, I had at one time a calf and several sheep with broken legs. Every one was repaired in this manner, the strips of bagging being wound about the limb, plastered over with calcined plaster mixed to a thin paste, and other strips wound over that and more plaster applied; the leg was fastened to splints of wood until the plaster set. The animal would limp about for a few days on three legs, but all recovered without a blemish. Let us make a note here, that when bars are used, they should all be let down and moved on one side before animals, especially sheep, are driven out of a field.

Dairy Husbandry.

THE DAIRY COW—NO. 19.

HENRY STEWART.

Trouble in Churning.

THE principal complaints of the behavior of the cream in the churn are, difficulty of procuring the butter; foaming of the cream, and white specks in the butter; soft, white butter; and waste of cream in the buttermilk. These troubles may all arise from improper feeding of the cow; from too long keeping of the cream; from keeping the cream at too low a temperature; from churning at too low a temperature; and from the condition of the cow. I will consider them one by one, as these are very frequent causes of complaint, especially by inexperienced dairymen and in family dairies.

When the Butter will not Come

the dairywoman may work for hours and all her labor may be spent in vain, unless she is told to raise the temperature of the cream by throwing into the churn a quantity of hot water. On one occasion I was churning a lot of cream which was full of small butter, but the butter would not gather; the cream was smooth and somewhat stiff. To test the case I continued to churn for seven hours, and still the cream was unchanged. The temperature was 62°. A few quarts of hot water, sufficient to raise the temperature to 65°, were turned in, and in two minutes the butter gathered, but it was white and of bad flavor. Over-churning had added six months to its age, for the excessive exposure to the air in the long churning had been equivalent to several months' keeping in the pail and had utterly spoiled the quality. But the low temperature was not the real cause of the trouble, for the next churning, noted exactly because it was made in a new churn, was at a temperature of 62°, and the butter came in 11 minutes. The next churning was at 65° and butter came in eight minutes. So that it could not have been the temperature at which the cream was churned; but—as it was on January 3rd, and the weather had been very cold, the cream cellar having been down to 40° for several days—it was the low temperature at which the cream had been kept that caused the difficulty. Cream that is kept at a temperature of at least 55° to 60°, and not more than six days, may always be churned in 30 minutes at a temperature of 62° to 65°, if the churn is a good one, and in the best churns butter will come in from 10 to 20 minutes.

Foaming of Cream in the Churn,

may be due to too low a temperature or too long keeping; slow, delayed churning is often accompanied by foaming. As soon as the churning begins, air is rapidly intermingled with the cream and innumerable vesicles are formed, each containing air. This expands the cream (as in whipped cream for cooking), and is really foaming; but under proper circumstances this foaming subsides as rapidly, and the noiseless motion of the churn quickly changes to a "slap-dash" sound, which precedes the more sharply liquid sound of the coming butter. If the cream is too cold for the particles of butter to unite, the emulsion (foaming) continues until the remedy—an increase of temperature by addition of hot water—is applied. But this emulsion may be formed in another way, and is often thus formed in the Summer, by too long standing of the cream on the milk, or too long keeping of the cream before it is churned. The cause of it is the formation of alcohol in the milk by the decomposition of the milk sugar, and the combination of the alcohol with the fat and the formation of an emulsion. When this happens no amount of churning will bring the butter. It may be expected when, on skimming the cream from the milk, a layer of whey-like or watery liquid is seen to have been formed between the milk and the cream, and the milk is thick and loppered under it. To prevent the trouble, half a teaspoonful of baking soda or saleratus may be stirred in the cream pot when the cream has been poured into it; and this should always be done, when this has occurred, at least one day before the cream is churned.

White Specks in the Butter

are the result of a too rapid souring of the milk or of keeping the cream in too warm a place and not stirring it every day when fresh cream is added to it. When fresh cream, with milk mixed with it, comes in contact with the sour cream, this milk is immediately curdled and the small flakes of curd become inclosed in masses of cream. When the cream is churned these hardened flakes of curd become mixed with the granules of butter and cannot be separated from them by washing. Coloring will not disguise this fault, for the curd will not take the color as the cream will; the coloring is prepared either with potash or oil and either of these easily unite with the butter, while they will not mix with curd. The only cure for this defect is prevention, by care in managing the cream.

Soft, White Butter

is caused by uneven temperature in the dairy and by the freezing of the cream or the milk, as well as by the food given to the cows. Some kinds of food will spoil the best cows as regards the quality of the butter, for the time being, and these should be discarded from the dairy. Potatoes, fed raw, have this effect, with the addition of a disagreeable flavor; and buckwheat bran or meal has a very distinct effect in this way. A week's feeding of buckwheat bran will produce butter of the texture and color of lard. But just here it is a question of management of the cream rather than of feeding that is to be considered. It is of importance that everything about a dairy should be regular and unchangeable. And in the care of the dairy, temperature is one of the essential conditions. If this is neglected and the cream is permitted to freeze, the butter will be white and soft. The color may be made right by the addition of coloring, but the soft texture will remain and the butter will lose its proper waxiness and become greasy, and this is beyond remedy. The cause must be prevented by providing some means of warming the dairy to keep the temperature even.

Waste of Cream

in the buttermilk is the effect of too long keeping, and not stirring the cream to secure evenness of condition. When the cream is turned out into the churn, if the bottom is watery and has a peculiar sweet and whey-like smell, that part of the cream will foam and form an emulsion, and will not mingle with the butter. When the butter is removed from the churn, this remains in the buttermilk, and after standing some time will appear as an oily substance on the buttermilk. Some persons have supposed that the mixing of different cows' milks, or the creams from the milks, produces such a waste as this, because when one portion of the cream is churned another is not. I have carefully investigated this point for some years, but have never found any evidence tending to support it until the recent publication of some experience by a person who stated that he had churned the cream of several cows separately, and then mixed, and the result was a very marked loss in the mixed cream. The loss was so enormous that some error might be suspected, and at any rate I have never found anything to support this statement. On the contrary, I have found many times that the cream of a cow, which by itself required 30 minutes to churn, was made into butter in 13 minutes when churned with that of another cow whose cream always churned rapidly. A great many trials of cows by churning their cream separately and then with that of others, never yet showed any loss. This result is reasonable; for when we consider how butter is gathered in the churn and one particle collects with itself other particles until fragments of butter are formed, and these gather into lumps by their natural cohesiveness, it is impossible to believe that the butter of one cow can remain in the churn by itself without mixing with the rest, or that if it did, it would not leave such very apparent traces of itself in the buttermilk that it could not be lost. If any cream is lost it cannot be lost in this way without palpable evidence; but it is lost frequently by mismanaging the cream in the way previously indicated. The cream is then found floating on the buttermilk, but it is not in such a condition that it can be made into butter.

The Horseman.

"PERCHERON HORSES TRIED AND FOUND WANTING."

THUS writes one of your correspondents in the RURAL of Dec., 4. But were these horses he thus speaks of *real* Percherons or only such as are *falsely called so*. Within the past 10 years, many horses have been imported from France, and called Percherons and Normans which were neither one nor the other. They were Boulonnais, a much coarser, slower and heavier French horse than the *true* Percheron. Others also have been imported, and perhaps been registered in the Percheron-Norman Stud Book, published in Chicago, which were colts picked up after weaning in Belgium and Flanders, brought to La Perche and Normandy, kept there till nearly or fully grown and then sold as true Percherons and Normans.

A true Percheron is superior to even a Norman. He ranges generally from 15 to 16 hands high, and weighs from 1,300 to 1,600 pounds. He is very compactly formed, with a fine Arabian-like head; arched neck; broad, strong, flat, sinewy legs; and the toughest and best of hoofs, well set up at the heels. His hair is soft and fine, and seldom long or shaggy on the legs. His action is free and easy, with a natural walk of about four miles per hour, and a trot of fully six miles, which can be easily pushed up when required to considerably greater speed. He is very docile, hardy, and of indomitable pluck.

If one wishes to have a good idea of a true Percheron, let him look at a fine well-bred Canadian pony, and imagine him grown to the size of a Percheron. French gentlemen frequently use these horses to their carriages, and handsome, noble, serviceable teams they make. I have often seen them thus harnessed in France, and occasionally used also as saddle horses, although not nearly so suitable for the latter as for the former purpose.

The Clydesdales are good farm horses, but not nearly so fine and active as true Percherons. As for Russian horses, I have seen thousands of these; some are quite good, but no better than our own Americans.

WESTERN.

Farm Economy.

COOKING, CUTTING AND GRINDING FODDER—COB MEAL.

E. G., Way, Kansas, says: "As coarse food for stock, what the Western farmer calls 'roughness,' is rapidly advancing in price, we need the experience of our best feeders, East and West, on the question whether the returns will warrant farmers in preparing food for horses, cattle, and hogs, by cutting, grinding, or cooking? An exhaustive discussion of this question, with reference to all kinds of feed and stock, giving figures, would be of great value, especially to your Western readers. It is stated, on what seems to be a scientific authority, that corn cobs have a nutritive quality, fully equal to the best straw. On the other hand, some farmers state that they are injurious when ground and fed to stock. Can we not get at the facts on both sides of this question also?"

ANSWER BY PROFESSOR G. C. CALDWELL.

Cooking Fodder.

The kitchen with its cooking arrangements, however rude they may sometimes be, constitutes the most essential part of the home that man constructs for himself; any other part of his habitation can be dispensed with, but not the kitchen. There the food provided for him by nature, in being softened and disintegrated by the cooking that it undergoes, is so modified as to be more easily masticated and prepared for the attack of the digestive fluids; in being made more palatable, it excites a larger secretion of some of those fluids, and in that way also the digestive work may be favored. The cooking produces no chemical changes of any consequence. Nothing more than this can be expected in cooking food for animals; and if the animal is provided with organs for suitably masticating its natural food and is not prevented in any way from doing the work of mastication in a proper manner, and does not require that its appetite shall be stimulated by tempting viands, it may be inferred that cooking fodder is a superfluous operation.

The most recent careful digestion experiments with cooked fodder, by Hornberger and others, show that, in accordance with these deductions, the fodder is not made more digestible by this treatment. In these tests the cooking was thorough, as the fodder was steamed for an hour, under a little more than the atmospheric pressure, and was allowed to cool in the cylinder; when taken out in the morning, if any water remained unabsorbed it was poured over the hay when fed, so that no soluble food should be lost in this extract. The steamed hay was at first readily eaten by the two oxen to which it was fed, but not so readily after a time. Besides the ration of steamed hay alone, the same oxen were fed for another period on the same kind of hay as dry fodder, and for still another period on a ration of the hay simply thoroughly wetted with warm water; samples of the fodder were analyzed, and the excrements were carefully collected, weighed and analyzed by samples. There was no notable difference in the digestion of the constituents of the fodder in the three cases, except as to the important protein or albuminoids, of which both oxen digested less in the steamed fodder than in either the dry or the wetted fodder, as shown in the following table, where the protein digested is given in per cent. of the protein in the ration:

	Dry fod'r.	Steamed fodder.	Wetted fodder.
First ox	44.27	29.77	35.07
Second ox	43.92	30 50	43.54

The experiment is seen to be highly satisfactory in respect to the close agreement in the digestive effect of the two oxen in the first two periods, both falling off to about the same extent on the steamed fodder, and in the agreement in respect to the digestive action of one of the oxen on dry and on wetted fodder. The other ox did not appear to be in good condition during the third period, as he did not eat well; but, nevertheless, he did not fail to digest the protein of the wetted fodder better than in the steamed fodder. Of course an experiment with but two oxen, however closely the results may correspond, does not settle the question, even though there is good reason for believing that the only effect of cooking on the protein, if there is any change at all, would be to make it less soluble, and less easily assimilable.

In an earlier investigation by Hellriegel, in 1864, it appeared from the average results with two sheep fed on rye straw thoroughly wetted with boiling water, and therefore only slightly cooked, that the digestibility of the protein was increased by about four per cent.; but as the alteration in the fodder by such treatment must have been very insignificant, and one of the animals digested the protein no better than in dry straw of the same quality, while the other digested it apparently very much more completely, the results possess no great importance in reference to the question under discussion. Emil Wolff, than whom no one can be more implicitly trusted, affirms in his writings on stock feeding, that cooking does not increase the digestibility of the fodder, and this conclusion, stated before the appearance of these last investigations, is amply confirmed by their results.

If we refer to the results of practical trials, where it has been attempted to compare the productive capacity of cooked and uncooked fodder for milk, beef, wool or pork, we find conflicting testimony, from which we can safely draw this conclusion only, that no advantage is gained in cooking any fodder that is good in quality, and in its natural condition is readily eaten. If, as appears above, cooking does not serve to expose the constituents of the fodder more fully to the attack of the digestive fluid agents, this is a reasonable conclusion, and science and practice agree. Some experiments, to all appearances carefully performed, seem to give proof of considerably greater productive power for fodder of good quality, when steamed or cooked, than when fed raw; but for every such result its opposite can be produced from the records in the agricultural journals, as any one can learn for himself who will take the trouble to examine the files of these; it would take too much space here to give the evidence in detail.

An ordinary farm supplies a great variety of foddering material, some of which is readily eaten by cattle, while other kinds will be refused if there is hope of getting something more agreeable to their taste or instincts. This poor fodder contains a large quantity of the same digestible nutrients that are to be found in good fodder, and which are fully as productive of milk or beef when once digested. The better and more concentrated the kind of fodder, the larger the proportion of each of its nutrients digested. In linseed cake 80 per cent. of the protein, 90 per cent of the fat and 80 per cent of the non-nitrogenous extract are digested. For good hay the corresponding figures are 78, 64 and 78 per cent.; for wheat straw, 26, 27 and 40 per cent. In the coarser fodder it might be supposed that the nutrient matters are so enveloped in, or mixed with, the excess of woody fiber as to be in a measure protected from the attack of the digestive fluids, and that the disintegration resulting from thorough steaming would naturally remove this obstacle to some extent. The above negative results, however, with good hay, where at least quite as large a proportion of nutritive matter remained undigestible, indicate that the expected result will not follow.

But as no digestion experiments with such coarse fodder, except those of Hellriegel above quoted, have been tried, we can get but little help from this quarter in the solution of the question. If poor and good fodder are

cut up and cooked together, so as to soften the harder parts of the former. A great deal of straw, coarse hay and other unpalatable material is eaten up clean and brought within the range of action of the digestive organs, which would otherwise be rejected and thrown into the manure pile, to the value of which they would add practically nothing. Herein lies, at least mainly, the explanation of the statement so commonly made, by those who claim to have proved it by their own experience, that steamed fodder is more digestible, and that a saving of from one-tenth to one-third or even more is effected by cooking. What is really done is to cause one-tenth to one-third more of the produce of the farm, good and poor together, to be eaten. Something may therefore be gained by cooking, either in this way or by selling good hay and buying straw.

In estimating the real saving effected, the cost of cooking must be taken into account, as well as the fact that it is only the poorer and least valuable part of the fodder that is thus utilized and saved from waste; all the good hay, the roots, the meal or oil-cake would produce just as much uncooked; when cooked up with the poor fodder they perform the additional service of securing the conveyance of that fodder into the digestive organs; some nutriment might even be gained from saw-dust or shavings in this way. As to the cost of cooking the fodder, the most ardent champions of the operation allow that it does not pay for a small number of animals; for as much outlay is necessary for ten cows as for thirty. In favor of the cooking it can be urged, further, with good reason, that the coarse product of the farm has much greater value for manure if passed through the animal body than if simply used for litter or scattered about the fields.

Cutting and Grinding Fodder.

While some go so far as to claim that it pays to grind straw to a fine powder; others affirm that for beef cattle it does not pay even to cut any fodder. Cattle are fully provided by nature with means for masticating their ordinary food, and we need not be surprised to find that both ordinary experience and careful experiments agree in showing that little if anything is gained by cutting. In fact it appears from some experiments that positive damage is done, as the fodder is not so thoroughly chewed and impregnated with saliva, a portion even passing at once into the second stomach. Cutting alone can do but little good, even with old and hard-stalked fodder, without the softening produced by cooking, for it cannot open the fodder to digestive action, nor save much labor of mastication. By far the greater part of this labor is expended on chewing the cud, and it is best that the animal should perform this entirely natural operation for itself.

Corn-Cobs.

The composition of average hay, straw and corn-cobs is given in the following table:—

	Hay.	Oat straw.	Wheat straw.	Cobs.
Water	15.	14.3	14.3	8.2
Protein	10.	4.	3.1	2.7
Fat	3.1	2.	1.2	0.4
Non-nitrog. ext.	49.4	35.6	37.5	57.2
Fiber	30.	39.7	40.	30.3
Ash	8.2	4.4	3.9	1.2

The cobs contain less of the valuable protein than is contained in straw, and less fat, but more of the non-nitrogenous extract. No digestion experiments have been tried with cobs, but with their delicate texture it is quite likely that, ground to meal, they would be as digestible as good straw. Such few careful experiments as have been made in feeding cob-meal, or cob and kernel ground together, show that the cob is digestible, a given result being obtained with less kernel when given with the cob than when given by itself; but all who have received good returns from cob-meal feeding insist that the whole shall be ground fine. It must be remembered further that for good results in feeding a due proportion of nitrogenous and non-nitrogenous constituents must be maintained. The cob contains a large quantity of the latter, as does also the kernel itself, and liberal feeding with cob-meal would require some addition of rich nitrogenous food to restore the balance between the two classes of nutrients, and keep the animal in good health.

Device for Raising or Hauling up Hogs.

A, A, A, represent three sticks like handspikes, all five or six feet long, according to the length of the hogs. B, B, are the spikes on which the gambrel sticks rest. C, is a long bolt that goes through the ends of all the sticks. The following is the mode of using the device: Place the hog on his back and the two sticks with spikes between his hind legs and outside the fore legs; the third to go behind, as shown. One man then holds the bottom of the two sticks steady, while another,

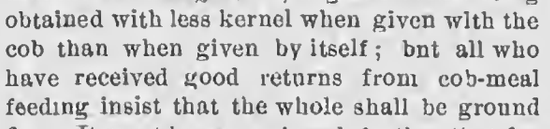


FIG. 447.

taking hold of them near the bolt, lifts them, the center piece rising with them and holding them at any hight one may wish, somewhat like a tripod or derrick. By this means two men can raise a 400-pound hog with ease.

J. D. PAYNE.

Horticultural.

THE CAROLINE RASPBERRY.

PETER B. MEAD.

It has been announced, and very generally accepted as a fact, that the Caroline Raspberry is a hybrid between Brinckle's Orange and Catawissa. I may remark that my plants are from headquarters. The first year's growth convinced me that the Caroline was a hybrid, but I very soon began to doubt its reputed parentage. I thought I could see, instead of the Catawissa, the growth of an old and familiar friend that I had known for 20 years. At the suggestion of Mr. Downing, I followed up the clue by calling on the originator of the Caroline, Mr. S. P. Carpenter, of New Rochelle, Westchester County, N. Y.

I propose to give the result of the interview very briefly. I asked Mr. C. what reason he had for saying the Caroline was a cross between the Brinckle and the Catawissa. His reply was, "I have no reason for supposing so, and have never said so, though others have. It is a seedling of Brinckle's Orange." That, so far, was entirely satisfactory. In the meantime we had arrived at the spot where the Brinckle plants had stood some eight years before. Now was my time. "Mr. Carpenter, do you know the old Yellow Cap?" "Oh, yes." "Did you ever grow it?" "Yes; I had a clump of it right there,"—probably some eight feet from where the Brinckle had stood. "Then the Caroline is a natural cross between the Brinckle and the Yellow Cap. Everything points that way." This seemed to be satisfactory to Mr. C., as it was to me. He then explained to me that he saw a very large and handsome berry on the Brinckle, and from that berry came the Caroline. Much more was said, but I only give the substance.

We next went to a plot of two acres or more of the Caroline. It has been said that the Caroline is not a strong grower. Mr. Carpenter is a very tall man, but the plants towered away over his head and hid him out of sight, while I was nowhere. The whole plantation is self-supporting, there being no stakes in it. A great many of the stalks measure an inch or more in diameter. My own grow equally strong. I can show a good many stalks an inch in diameter on plants only two years old the past Fall. So much for the feeble growth of the Caroline.

At my request Mr. C. showed me his sales book. I found that he had received an average of nearly 20 cents a quart, his lowest price being 18 and the highest 22. The entire crop was engaged by one dealer (as it had been before), who retailed them for from 25 to 30 cents a quart. I was eating all the time I was talking, and suppose I must be somewhat in that man's debt at these prices. One word as to the hardiness of the Caroline. It was raised about seven years ago, has never been protected, and has received no injury whatever from frost.

The accompanying illustration gives a fair idea of the average size of the berry of the Caroline, but not of its remarkable productiveness. The berry is nearly round, and when ripe of a rich salmon color, and very attractive when placed on the table. The flesh is tender and sweet, with a peculiarly rich raspberry flavor. The more you eat of it the more you like it. Some have said that it is as good as the Brinckle. I do not think so. The Brinckle, for quality, still stands unequaled. The Caroline, however, when ripe, does remind one of the Brinckle, and that is no little praise. It is an improvement in the right direction, and not its least merit is its well-tested hardiness.

It is said to be too tender for market, but chiefly by those who have not tried it. I am inclined not to agree with them. Carefully packed, I think it will carry well from 50 to 75 miles; at least I have carried it that distance and used it pretty roughly. Still I only express an opinion. It has been demonstrated clearly enough that it will carry to a near market. Be this as it may, it is a splendid plant for the garden.

The Caroline is a rampant grower. The cane for a foot or so above ground is very thickly set with short prickles, like the Brinckle; they then gradually become very few, and the whole top growth becomes exceedingly like the Yellow Cap, as will be readily recognized by anybody familiar with the latter. The ripe wood is a dull brown, covered with bloom while young.

It may not be out of place to remark that Westchester County has made a good record thus far in the berry business. First there was the New Rochelle Blackberry, a wildling; then the New Rochelle Raspberry, raised by Mr. Carpenter, and almost at the same time the Caroline, also by Mr. C.; and just a few miles away Mr. Cuthbert gave us the fine berry which bears his name.

The Caroline Raspberry.

This variety, like the New Rochelle, originated with Mr. S. P. Carpenter, and is comparatively a new variety. The plant is a strong, vigorous grower, and, thus far, appears to be perfectly hardy and very productive. The berry is of good size, and, when ripe, of a beautiful salmon color, not so firm as the New Rochelle, but decidedly better in quality. It has been claimed to resemble the Brinckle's Orange so closely in this respect as to render it difficult to detect the difference between them. This may be so to a novice, but not to those well posted. It propagates from the tips and by suckers from the roots—pretty strong evidence that it is a hybrid and quite probably there is Brinckle "blood" in it.

An amateur friend who has investigated the subject pretty well, gives it as his opinion "that it will carry well a distance of 50 to 75 miles, and as the fruit retailed the past season at 25 and 30 cents per quart, he thinks 'there is money in it.'" But what matters it whether there is or is not money in it, or whether it will carry well? Are these the chief requisites by which to judge of its value? Do we do not do injustice to fruits and injure the cause of horticulture by laying too great a stress on these tests?

In tens of thousands of private gardens there is great need of just such a hardy, productive and good quality raspberry of this color as the Caroline *promises* to be, and there the profit in it will not be computed in dollars and cents, but in the satisfaction of having an abundance of the delicious, healthful fruit, without the cost and labor of covering the canes in Winter, as is needed with the finer kinds heretofore grown. I sincerely hope the promises of the Caroline will be fulfilled. E. WILLIAMS.

Montclair, N. J.

THE CAROLINE RASPBERRY.—FROM LIFE.—FIG. 448.

The Wilson has a Friend in Need.

No horticultural advice has been more delusive or disastrous in its results than the recommendation of varieties in strawberry culture. The fascinating pictures and glowing descriptions of new varieties in the catalogues, and the wonderful figures of actual yield per acre published in the horticultural papers, have deluded us year after year with the hope that we had found the berry to "beat the Wilson." So we have tried Jucunda, Boyden's 30, Monarch of the West, Great American, Forest Rose and Sharpless, only to meet with total failure, while Prouty, Charles Downing and Crescent have proved, on an average, about half as valuable as the Wilson.

Notwithstanding our losses and disappointments, we are listening to the same advice, and looking at the same pictures with new names attached, and will next year try Marvin, Glendale, Mount Vernon, and a score of just as worthless new sorts.

One hundred plants of the Crescent yielded the next season after planting, 33 quarts, while 100 plants of the Great American, treated in the same manner, gave only 10 berries, and 200 plants of the Sharpless, only three quarts. The soil was a rich, black prairie, somewhat sandy, with a clay subsoil. The ground for all was kept perfectly clean. G. W.

Rock Falls, Ill.

Preparing Asparagus Beds or Fields.

It is our humble belief that thousands of loads of manure have been thrown away upon garden asparagus beds. Our teachers, or many of them, have instructed us to trench two feet deep and fill in with manure and soil. Thus treated, they say, "an asparagus bed will last a lifetime." No doubt. We know of fields of asparagus 20 acres in extent, that have never received *any* manure, according to the statements of the owners, and they have yielded plentifully for 25 years. The soil is simply a sandy loam, such as exists in a long belt along the south side of the Long Island Railroad.

We do not wish to make any extreme statements. We have talked with the asparagus growers of this Long Island asparagus belt—as it may be called—and many of them are of opinion that asparagus grows as well and as large without as *with* manure. This is inexplicable; but we are fully of the opinion that an occasional top-dressing of manure is all that is needed in field culture, and the same treatment should apply for a family bed. As for burying an immense amount of manure a foot or more beneath the surface so that a bed may "last for a lifetime," probably a great part of the manure is not available to the roots at all. For the rest, its effects could scarcely extend beyond 10 years, if so long.

RURALISMS.

Thanks, Mr. Editor, for the alcoholic suggestion. It proved to be a good one, and the lady alluded to returns her thanks. The mealy bugs were treated to it, and it made them *dead* drunk. It had the same effect on the scale and some other pests on which I tried it, and it might be made use of as a general insecticide if it were not too costly. It will bear some dilution.

The above reminds me to make a suggestion. Why not try this remedy on the phylloxera in Europe? In France there is a great deal of very bad, adulterated wine; so bad, indeed, as to have called for a certain kind of action on the part of the government. This wine, or a large part of it, is unquestionably not fit for human beings to drink, being essentially poisonous. Recourse has been had to flooding to destroy the phylloxera. Why not, then, take all this bad wine, and flood the vineyards with it? It contains alcohol and active poisons enough to kill ten times the number of phylloxera to be found in all Europe. In this way we shall get rid of two great evils at once.

I wish to say a word or two about Lonicera Halliana, or Hall's Honeysuckle, received from Japan some years ago by the Messrs. Parsons, but not yet, in my opinion, half as much grown as it should be. It has been objected to it, if I mistake not, that it does not hold its foliage as

well as the old Dutch or Evergreen. This may possibly be so in some localities, but it is quite at variance with my experience and observation. It has also been said that it does not bloom quite so early or quite so late. This, too, is inconsistent with my experience. With me, and wherever I have seen the true kind, it blooms early and continuously till late in the Fall. It is also a dense mass of foliage, as a general thing, till mid-winter has been long past and gone, and it is no uncommon thing to see old leaves and new side by side in the Spring. The flowers are abundant and deliciously fragrant. In these respects, I think it will compare favorably with the best of the old kinds. But I have another claim for it, which places it above and before all the others. It is well-known to all who have grown the honeysuckle that the old kinds are fearfully subject to the aphis and mildew. On the piazza where ladies are accustomed to sit on pleasant afternoons, this aphis is a disgusting nuisance. If one brushes against the plant she becomes covered with these pests, and her pleasure for the time is gone. To be brief, I have grown Hall's Honeysuckle for a number of years, and I have found it to be free from these serious drawbacks, and a clean plant to handle at all times; so much so, that I removed all the other kinds from the piazza about four years ago and replaced them with Hall's, and have never regretted it. I now never use any other kind to plant near the house. Some of the others are very pretty, but they must go to the background till they can present more cleanly habits. I, therefore, name Lonicera Halliana, (or, if you prefer it, Lonicera Japonica var. Hallii) as another subject for your list of hardy shrubs, to be used around the piazza and similar places; but I do not wish to be understood as discarding the others.

I am very much pleased with Mr. Stewart's articles on Farming for Boys. Thus far they have been simple, clear and practical and admirably adapted to the understanding and capacity of boys. If he can only maintain this lucid style, and remember all the time that he is talking to boys, he will furnish an invaluable series of articles which many "boys of an older growth" may read with much profit. He has a difficult and tedious, but I hope loving task before him, and I wish him all the success which his articles thus far give promise of.

I am strongly moved to add here a few simple words to the memory of the late Mrs. Charles Downing. Her relation to the horticultural world was of a peculiar nature, and deserves recognition. It may be safely said that no woman ever entertained so many horticulturists as she did. In this and other ways she materially helped the cause, and is entitled to respectful mention and remembrance. She had a nice taste for fruits, and was passionately fond of flowers which she grew largely. Having no children of her own, she went about doing good among the children of the poor, and in the church and out of it she was known for her many acts of benevolence. In this field of labor she will long be gratefully remembered. Above all, her daily walk was a beautiful example of a consistent Christian life and faith, which enabled her to bear years of painful suffering without complaining, and at last to fall asleep, as it were, so peacefully that none knew when she departed [May her worthy husband long be spared to us.—EDS.]

Pomological.

THE TREE-PEDDLERS OF THE NORTHWEST.

THESE remarks are penned wholly from a sense of duty, in the hope that they may help to guard the honest, industrious citizen from being victimized by the glib and wily tongues of the above class. While I speak of facts, I omit names, not caring to be personal, and because I wish to warn the community against a class rather than against individual dealers, and not being a tree dealer myself I have no competitor to abuse.

The class of men I refer to are always strangers and nearly always from some other State. The territory they seek to pillage is that occupied by new and inexperienced settlers, and they always shun the old settler with his years of experience. Men living north of us have sent their agents down through the northern part of Iowa, each year taking a new strip at a distance from that "worked" the year before. Large lots of plums have been sold by them, under the name of Miner, at the extravagant price of 50 cents and 75 cents a tree. Had they been the genuine Miner, they would have been dear at these figures; but they have seldom or never been true to name. Hundreds of the once famous Soulard Crabs have been sold at the same prices. In my travels through Dakota this Fall I saw a great many trees of the same variety sold to new settlers who had been made to believe that they had in them something choice and remarkably hardy, whereas, in fact, fruit of this kind is no better than the bitterest wild crab I have ever tasted. I also saw a lot of "Quaker Beauty" apple trees sold under various other names, though no one who knows this sort wants it. Ben Davis has often been sold for Pewaukee. Forked, crooked and stunted four or five-year-old trees have been sold for first-class three-year-olds. Whole car-loads of trees have been bought up at the South, after all that could be sold in the home market had been culled out, and these refuse trees have been carried up to the north of us and again brought South and sold as Northern trees, after having been shipped and reshipped, exposed to the sun and winds often for hours and not unfrequently frozen and thawed before reaching their destination. In this neighborhood agents sold the people large bills of such trees by representing that they were themselves connected with a particular church here.

The man who has been swindled himself by these sharpers can warn others with greater force than the man who has escaped their snares. I belong to the former class, having bought a lot of common apple trees on condition that a specified number of choice sorts should be sent with them at the same price. The common varieties came to hand, but only one of the choice sorts, and of this only one-third of the number of specimens promised. Frequently I have been asked by strangers to make out a bill of trees at my own price, in order that they might get my name on their books so as to get a good start among my neighbors. One agent showed me his contract with the firm he was working for, and by it more than half his sales had to be of trees of no value—such kinds as were thought good when started in the seed-bed or nursery row, but which had proved failures when old enough to sell.

These are only a few specimens of the tricks of tree-peddlers in the Northwest. MORAL—Before buying, *know your man.*

Floyd Co., Ia. ANTI-HUMBUG.

The Beurre d' Anjou Pear and Lindley Grape.

I am happy to see by the RURAL that Patrick Barry—than whom no man is better able to judge—pronounces so emphatically on the excellence of the Beurré d'Anjou Pear and the Lindley Grape. I concur fully in his appreciation of both, and, although it may appear egotistical even after forty years of trial, I beg to repeat what I have often said in our pomological conventions, that if I had done nothing else beyond introducing the Anjou I should feel that the man who was so fortunate as to have been the medium of doing this, would be remembered as a benefactor to American pomology. I have never known it to fail to yield a fair crop, having had, even in this poor season, 150 bushels. I have it on my table from October to March, and, take it all in all, I say with Mr. Barry, "it is the best pear in the world." Of the Lindley Grape—and it is time to drop the No. 9, the American Pomological Society having decided to do this long ago—I would also state that from the first introduction of Rogers's grapes I have considered it one of the most reliable varieties. Its quality is but little below that of the Delaware with me, while in size, beauty, vigor and hardiness it is superior. As a proof of its excellence, I selected samples of both, taking small berries of the Lindley, so as to have them in appearance as much alike as possible, and had them tested by connoiseurs. Nine out of eleven persons preferred the Lindley.

Entomological.

THE ARMY WORM.

THIS well-known pest has been often referred to, and few parts of the country have not suffered from its depredations. In order that the

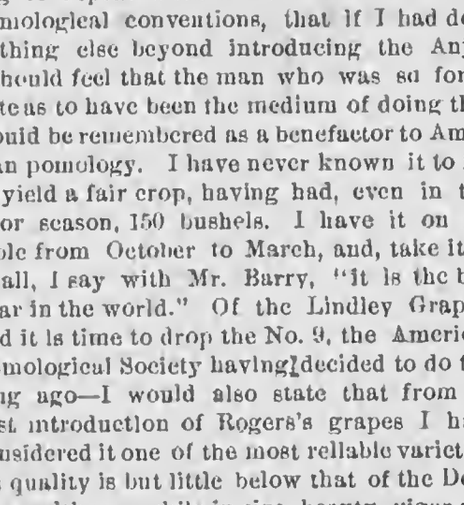

FIG. 449.

farmer may know exactly what it is he has to deal with when it appears upon his crops, we reproduce new illustrations of it from Prof. Comstock's description in the forth-coming Report of the Department of Agriculture, showing the beetle, the worm and the larva. See figures 449, 450, 451. The Army worm—which should not be confounded with the Cotton worm—has the scientific name of Leucania unipuncta, and has been known in the United States since 1743, but its history and ravages attracted little attention until since 1861. The adult insect is a night-flying moth of a dull brown color and nearly two inches in width when its wings are expanded. The eggs and manner in which they are laid, as well as the pupa, which is of a dark-brown color and nearly three fourths of an inch in length, are shown at figure 449. These remarks will help to locate and determine the insect, but it is the larva, or worm, which does the injury.

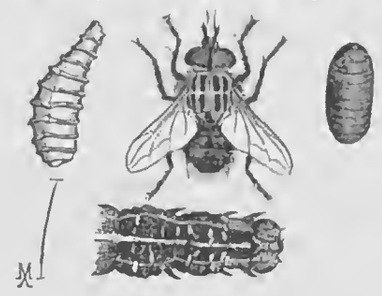

FIG. 450.

The worm is, when full-grown, about one and a half inch in length, as seen at figure 451. During the larva or feeding stage, lasting from 16 to 30 days, it changes or casts its skin five times. Its body is of a pale green color, varied with longitudinal stripes of yellow, gray and black, the gray often so closely dotted with black as to be dusky. The worms are found eating the leaves and buds of different kinds of grasses and cereals, and feeding chiefly at night. They commenced feeding in places on Long Island about the first of June, 1880, and migrated to other places, disappearing in from 20 to 30 days. There was but one crop during the season, but in some parts of the country two and even three are reported.

The natural habitation of the moth is in low marshes or about the wild grass of wet or moist places. In a dry season it is said to breed more abundantly than usual, having an unlimited range for feeding; then, if a wet season follows, the overflowed swamps drive it out from its lurking place in immense numbers, so that it swarms over the adjacent country. When it has become sufficiently mature to get its wings, however, it flies back to the swamps, finding the open country too dry for it, and in this way rejoices the husbandman by its disappearance.

FIG. 451.

The remedy is to keep watch of any piece of lowland and destroy the worms by burning the bushes, etc., so as to destroy the hibernating insects, or by poisoning them with London-purple, Paris-green, etc., when possible. When they appear in fields they may be sprinkled with arsenic or the above poisons, by mixing them with water and using a fountain pump. Another method is to plow a furrow or ditch around any infested field, which prevents their migration. An insect or parasite upon the Army worm, and which destroys a great number, is the Tachina fly—Nemorœa leucaniæ—which is shown at figure 450, and has much the appearance of the ordinary house fly, and is found in great numbers where the Army worm abounds. It is thought the crop of worms will be lighter next year from the known existence of great numbers of these parasites. The fly lays its eggs, often as many as 18, upon a single worm, in such a manner that the latter cannot destroy them. Here the eggs hatch and the larvæ eat into and destroy the worm. The birds are among the best friends of the farmer in destroying these pests.

Official Work of the Entomologists.

The work of the U. S. Entomological Commission has advanced with marked success during the present year. Professors Thomas and Packard have been engaged in a study of the Rocky Mountain Locust, and Professor Riley has conducted the cotton-worm investigation. It is thought that the pyrethrum may prove a valuable and safe antidote to the cotton worm, and steps have already been taken to introduce this plant in the Southern States. The result of the locust investigations made by Professors Thomas and Packard and their able assistants, shows that the Caloptenus spretus (the species of locust under consideration) has done much less damage this year than usual, Utah, Dakota, and Montana being unusually free from its attacks. Investigations will be resumed in the Spring of 1881, when Professor Packard will take up the work again in the Western States and Territories. It is thought that the locust will never again be as destructive as in the past. So may it be.

The Poultry Yard.

RAISING BROILERS IN WINTER.

L. S. HARDIN.

(Incubator experience continued.)

THE incubator has been running quite steadily for the last few weeks, giving but little trouble to keep a regular temperature in the oven; but now that bitter cold weather has set in, I am having some bother. The bottom of the incubator is very thin, with no protection against the weather. In fact, it has numerous holes to let the air pass through. This is on the theory that the nest being naturally upon the ground, a cold bottom is necessary. In extremely cold weather we get a little too much of this, and while the air in the oven marks the correct temperature on a thermometer hung over the eggs, one laid on them indicates too low a temperature. To avoid this trouble, I must change the gauge and heat the air to a higher temperature in the oven, say to 106 degrees. As the room warms up after the adjacent kitchen fire has been going all day, the eggs become too warm, which must be guarded against. The gauge to my machine requires several hours to regulate it after changing, and to save this trouble I have put a ventilator in the top of the oven, which I open gradually as the room warms up, and thus keep the eggs at the right temperature. There is a peculiarity about the temperature of the eggs—the oldest are always the warmest, while those last put in the oven are one or two degrees cooler, according to age. In order to get at the mean temperature when all the eggs are subjected to the same degree of heat, the thermometer should be kept on those nearest ten days old. To provide against the inconvenience of this requirement some incubators have different degrees of heat in different drawers, which is a good provision. In my machine there are also about two degrees, variation of heat between the eggs nearest the center and those at the outer edge of the pan. In order to give all as nearly as possible the same advantage, when they are turned the position of the eggs should be changed, those on the outer circle being put in the center and *vice versa*. The sand should not be allowed to get packed too hard, and to prevent this, at least once in three weeks the eggs should be put into a fresh pan with the sand well moistened and loosened up. In my machine the pans slope toward the center, and to prevent the weight of the eggs from injuring the air bubble at the larger end, I place all the eggs with the points inward until the chicks are expected to appear, when I reverse them to give the chick the advantage of gravitation in getting out of the shell. These are small matters, but it is a multitude of these little things that measures the success or failure in handling eggs and young chicks.

The Breed for Broilers.

Since I get my eggs promiscuously about the country, as the chicks feather out I find every conceivable breed represented, with more or less of purity, the Leghorn and Brahma blood largely predominating. Chicks that become heavily feathered early, grow slowly and are sure to be the first to fall ill, being apparently weakened, as though the production of the heavy coat of feathers had sapped the life-blood in them. Those with partly nude bodies even in the coldest weather seem to suffer less from exposure than the others, and grow much more rapidly. They are full of blood, with bright-red combs and vigorous appetites. From the present outlook, theoretically, for I have had no actual experience as yet, the most perfect cross, considering constitution, which is the vital point of profit, would be that of a Brahma cock with Houdan hens. I call constitution the "vital point," for while quality of flesh, as of the Dorking, tells well in market, this can be acquired by correct feeding; while a little chick is a delicate subject to deal with, and the rate of mortality is by far the most dangerous feature in the business so far as a square profit is concerned. With a wise and judicious selection of breeding stock, together with proper handling and care, trouble from this cause can be greatly remedied, but in my experience the cost of running the incubator and of buying eggs and feed for the chicks, is not of so much importance as the keeping of the chicks alive. In my case the mortality among 80 chicks is about one a day. If the same number of chicks were running with hens, the number lost could only be guessed at, for those lost in the weeds or otherwise would not be missed, and I am sure under such circumstances I would consider myself doing wonderfully well to show as good results as I now do.

Accidents.

To manage 80 chicks, two brooders and an incubator, without previous experience, and the mercury near the freezing point, requires a steady hand and the greatest vigilance to prevent an occasional accident. I have not broken a half dozen eggs since I started, but

have several times come near killing all my chicks both in and out of the shells. A kerosene lamp heats the brooder and there are openings directly from the lamp flue to the inside of the brooder. By some cause the damper above got closed one day, and I entered in time to see a volume of smoke pouring out of the lamp chimney. The chicks could not be seen through the glass door of the brooder, and when it was opened a heavy volume of smoke rolled out, and the little chicks that once were white came out as black as a pirate's flag. A few minutes more and they would all have been dead. At another time the door was left ajar while extra heat was turned on to make more heat for the chicks below. One of my numerous visitors very thoughtfully closed the door, and when I discovered the chicks they were spread out apparently dead from suffocation; but fresh air revived them. While these accidents and many minor ones do not always prove fatal at the time, they must in a measure contribute more or less remotely to subsequent deaths in the flock.

The other night, forgetting how cold it was, I failed to turn the stove wicks up far enough and also neglected to look at the thermometer. Waking up at one o'clock, I wisely concluded to get up and take a look at things, and discovered my omission. The eggs had been kept at least two degrees too cold for several hours. What harm this did will only appear in subsequent weakness of the chicks, for it is undoubtedly a fact that eggs can be so hatched, as to produce either strong or weak chicks. A good egg can be spoilt or a bad one greatly helped, all depending upon the management of the incubator.

On two occasions I have read the thermometer wrongly, when the gauge played on me the trick of not working, and when I again examined the oven, the eggs were heated up to 102 degrees, the excess of heat thus injuring all that it did not actually destroy. It is really wonderful how much abuse an egg will stand and yet hatch a chick. I give the above mishaps merely to show that they should be counted in the cost of raising broilers for market.

Questions for Duck Raisers.

In the RURAL of Nov. 20, page 767, Mr. L. S. Hardin gives some notes about ducks, in which he says, "All the water they need, (that is young ducklings) is best furnished by burying an old pot in the ground and laying a round piece of board on top of the water, with room for the ducks to stick their heads in and fish out the corn that is put in the water." What I wish to know is how large a pot is best to be used for that purpose, and how deep the water should be in the pots; also at how young an age the ducks will fish out corn, *and eat it*, if so provided for them? I have raised some ducks, but never in that way; but if that is the best way I wish to adopt it in the future. I raise them for their eggs, and have found by experience that the Pekin duck will lay more eggs in a year than any other I have ever tried. I do not let them run to the water when young, neither will a young duck eat whole corn, under my management: hence, the above question to Mr. Hardin. There is a small stream running through my grounds, to which the grown ducks have access daily in the open season, and they will eat only once a day with me; that is, when they come to their pen for the night—and then, not enormously. In the morning they never stop to eat, but go at once for the water. It may be that they get from the straw, during the day, food that suits them better than corn. I should like to hear what others say about that; also what Mr. Hardin's experience has been in such cases, as from his article alluded to, it differs from mine in such matters.

J. TALCOTT.

Remedy for Roup in Fowls.

Towards the last of December, 1879, I found one hen sick out of 48 or 49. What was the matter with her? For information I consulted Solon Robinson's "Facts for Farmers and the Family Circle," and found it to be roup. I took her from the nest and held her head over smoking sulphur; soon after, I gave her nearly one teaspoonful of kerosene oil, and, later, the same amount of rum in a tablespoonful of warm water. Next day I found a second one sick and followed the same treatment with her. In two days afterwards the rest of the flock were all sick. I could not dose all in the same manner, so after they went to roost I took an old-fashioned iron baking kettle, put in it some live, red-hot coals, and put it into the hen-house in a box two feet from the floor. Then I threw on the coals three single handfuls of sulphur, closed the door and left them to their fate. Nearly an hour later I went to see how they fared, and found their feathers wet from what they had thrown out of their mouths, but their breathing was quite free from any rattle. I smoked them every night for three weeks and every one lived, and we had all the eggs we needed to use. One of my neighbors, who had about 70 fowls affected in the same way, killed and gave away all he had, though they were not any worse than mine were. After they had got over the first attack, I watched them closely and whenever any signs of its reappearance were noted I smoked them again, keeping it up until May, 1880. L. S. H.

Spring Hill, Cape Cod, Mass.

Arboricultural.

THE JAPAN JUDAS TREE
Cercis Japonica.

THE Red Bud, as the American Judas Tree is called, has, after the manner of many hardy American trees, at least one near relative in Asia, Cercis Sinensis or Japonica. You notice the resemblance, in both foliage and flower, as you pass out on the lawn any early Spring morning. But how much richer and more charming in foliage and flower is the relative from Japan? Our American Red Bud is an attractive tree at all times during the season, and especially in Spring when the rosy tinge of the small red buds is decidedly conspicuous among half-opened, shining heart-shaped leaves.

JAPAN JUDAS TREE AND FRUIT.—FROM LIFE.—FIG. 452.

But give your attention for a space to this Japan Red Bud. Here you have other and more excellent flowers as well as foliage. Can any thing be more beautiful and unique in its way than the masses of purplish pink blossoms that wreathe and enfold the stems during April or May before the full-fledged leaves appear?

This peculiar habit of resting directly on the stem is termed, in botanical phrase, *sessile*. These flowers generally linger until the leaves are fully born, apparently to develop another feature of their beauty when shown against the background of large, deep-green, rich-looking foliage and delicately tinted, light-brown bark. Rich, firm, shining leaves make the Japan Judas Tree interesting and choice in Summer, although of course, Spring is the hey-day of its charms.

I have intimated that the Japan Judas Tree is a shrub, but by that, intend rather to convey that it grows thick and close to the ground with several stems and no main leader, than to suggest the idea of a low-growing or dwarf plant. It is not, indeed, a rapid grower during its earlier years, but in time increases to the size of a medium-sized tree. Its dimensions are, moreover, occasionally curtailed in New England and the Middle States by an unusually severe Winter. It is safe, therefore, to class it on the lawn with medium-sized, slow-growing shrubs.

Sometimes one sees a Japan Judas Tree spreading itself too much for the retention of proper clothing at its base, and become almost ungainly. This habit, however, should not be set down against its good character. It is only owing to lack of training or pruning, and most shrubs will look as badly if left uncared for in this respect. Just after the flowers have faded in May, the pruning knife should cut off at least two-thirds of the flower-bearing wood. It may be objected that such treatment gives the plant, for some time at least, a bare, unsightly appearance. The time, however, of nakedness is really short, a week or so serving to develop a fair growth of leaves; and the gain in bushiness, size and abundance of flowers as well as in prolonged shapeliness, amply compensates for a considerable sacrifice of such kinds.

The Japan Judas Tree would be scarcely termed a rare tree. It is not a new plant, having been grown and sold in different parts of the world for many years, but it is not easy to propagate except from seed and seed is not common. Hence, on this account, and on account of an unfortunate slowness on the part of the general public to appreciate the value of choice plants for want of giving proper attention to such matters, the Japan Judas Tree remains an uncommon lawn plant. Yet few hardy plants are more generally excellent. The small rosette-like flowers secure naturally our first attention, but it should be remembered also, that not only is the foliage large, heart-shaped, shining, and of firm texture, and dark green color all through the Summer, but that in the Fall when so many shrubs lose their beauty, if not their leaves, at an early period, this shrub continues long both fresh and effective.

Indeed, we may safely class the Japan Judas Tree among our most valuable, hardy, ornamental plants, and ask all lovers of trees to give it a trial, though in so doing, they are obliged to make it one of the half dozen plants their yard will contain.

SAMUEL PARSONS, JR.

Miscellaneous.

THE GREAT "KENT" SALE OF CHANNEL ISLAND CATTLE.

SAMUEL C. KENT, of West Grove, Pa., spent a good part of the Summer in the Islands of the Channel, and brought home thirty-nine Guernsey cows and heifers and two bulls, and eight Jersey females. This herd has been subjected to three months Federal quarantine, and most of the cows have calved. All, with the exception of one which had met with some accident, were sold at auction by the Messrs. Harkness, of Philadelphia, on the 9th inst., making the whole number, including calves, 71. There has never been nearly so good a collection of Guernsey cows imported together into this country—and the few Jerseys were equally fine.

Samuel Kent may well be congratulated on the emphatic indorsement of his judgment evinced by the high prices at which the cattle sold. It was a bold venture to buy such cattle and risk them upon the stormy Atlantic, but the result, no doubt, makes it a pecuniary success. Special attention was paid to the "Guenon Milk Mirror" otherwise the selections were made with reference to the characteristic points of each breed, and to those universally recognized as belonging to good milch cows. The following is a list of buyers and of the prices paid.

GUERNSEY COWS AND HEIFERS.

1. Lady Jane 2d, 7 years; R. Stuyvesant, N. Y.	$650
2. L. J.'s daughter, 8 weeks; Francis Shaw, Boston	200
3. Lady Jane 5th, 2 yrs; Michael Schall, York, Pa	440
4. Saffrano, 2 4-12 years; T. S. Watts, Baltimore, Md	310
5. S.'s daughter, 10 weeks; J. E. Philips, Baltimore, Md	110
6. Lilly 2d, 5 years; M. Schall, York, Pa	275
8. Beauty, 2 3-12 yrs; J. E. Phillips; Baltimore	510
9. Beauty's daughter, 6 weeks; Francis Shaw, Boston	200
10. Rose Bud, 3 3-12 yrs; R. Stuyvesant, N. Y.	400
11. R. B.'s daughter, 7 weeks; G. S. Watts, Baltimore	145
12. Topsey, 11 months; Thos. M. Harvey, West Grove, Pa	$210
13. Birdie, 6 months; R. Stuyvesant, N. Y.	90
14. Daisy, 2 years; Francis Shaw, Boston	425
15. Rose, 2 years; Francis Shaw, Boston	460
16. Laura, 2 yrs; Thos. M. Harvey, West Grove	350
17. Laura's daughter, 3 months; J. E. Phillips, Baltimore	115
18. Venus, 2 years; W. H. Carver, Philadelphia	300
19. Fill-Pail, 2 years; Francis Shaw, Boston	460
20. F. P.'s daughter, 3 months; G. S. Watts, Baltimore	180
21. Marie 2d, 2½ years; G. S. Watts, Baltimore	500
22. Buttercup, 3 years; F. Shaw, Boston	270
23. Nelly 2d, 6 years; R. Stuyvesant, New York	460
24. Pride, 2 3-12 years; M. Schall; York, Pa	400
25. Pride's daughter, 10 weeks; M. L. Groider, Mt. Joy, Pa	145
26. Darling, 2½ years; E. C. Freeman, Cornwall, Pa	400
27. Rosebud 1st Vauxhelets, 6½ years; J. N. Borland, New London, Ct	300
28. Valentine 4th, 1st Vauxhelets, 18 months; E. C. Freeman, Cornwall, Pa	320
29. Polly, 2 2-12 years; J. M. Codman, Brookline, Mass	360
30. Polly's daughter, 10 weeks, M. Schall, York, Pa	125
31. Duchess 3d, 5 years; Col. Ettinge, Concordville	375
32. Blanche, 2 3-12 yrs; J. E. Gillingham, Phila.	205
33. Butterfly, 15 months; J. D. W. French, No. Andover, Mass	200
34. Lydia, 15 mos; D. M. Eyer, Marietta, Pa	280
35. Nelly, 3 years; R. Stuyvesant, New York	410
36. Nelly's daughter, 3 months; J. M. Harvey, West Grove, Pa	130

The Famous Three Mares of Mahomet a Myth.

THE Arabians believe with sincere faith that their finest horses are direct descendants from the famous mares of their great prophet, Mahomet; but this is about as much a matter of fact as that he was the inspired prophet of God. Count Lecoulteux de Cantelen, of France, has recently made a special study of this tradition, and, in the Revenue Britannique, affirms, that when Mahomet fled from Mecca to Medina to save himself from assassination the only animals he possessed were nine camels. Other writers assert that he never had either a mare or a horse, and that it was some time after his death horses were made use of in Arabian armies. Hitherto they had employed dromedaries alone for swift movements, and camels for the transportation of baggage and arms. The Arabians are an excitable people with any amount of credulity and gasconade. The braggadocio stories they get up of the great performances of their horses must be taken with considerable allowance, as it is impossible for these to gallop the distances they boast of within the short space of time often allowed them, and especially on the modicum of food and water taken on the route, and sometimes with none at all for a burst of a hundred miles or more.

A. B. A.

Food and Other Adulterations.

BECAUSE chicory is mixed with coffee, glucose with sugar, cider with wine, lard and oleo with butter, it does not follow that these articles are of themselves harmful or that they ought not to be produced, but the same regulation should follow the manufacture or production of all these and their use as follows all other things.

If a person mix poison in food, if he use a gun to wound another person, then it is crime, and in the mixing of different articles and products there should be crime and a penalty just in proportion as the act was an injury. If a store-keeper deceive in selling any article it should be a crime. And this with food and all other adulterations. Many people prefer chicory in their coffee and spirits in their wines, but the mixing should be a known and an exact formula, and when purchasing, the buyer should be insured in getting what he pays for. It is the regulation of traffic, not of production, which is demanded. There are few things but need to be produced.

but the producer of these few things must not be allowed to cheat or deceive in the sale, this is the true definition of fraud and this it is which the State may and should punish. It is clearly demanded that every article purchased be susceptible of proof as to character and quality and that penalty be incurred for deception or falsehood. B.

[The above is handed us for publication by one whose opinions are entitled to much consideration. We cannot say, however, that we at all agree with his opinions. Eds.]

RURAL BRIEFLETS.

A CORRESPONDENT from Butler County, Pa., writes us that he needs to know how to make poor land so rich that it will produce one hundredfold; where to get seed that will produce 300 bushels of corn to the acre; where to obtain the best breeds of stock; how a poor farmer can be made rich. . . . . .

Mr. BARRY'S note under "What Others Say," regarding the Fameuse or Snow Apple, does no more than justice to that handsome, excellent fruit. It thrives well in Nebraska, Iowa, Illinois, Wisconsin, New York, Connecticut, Vermont, New Hampshire, in parts of Canada, and we know not where else. The Fameuse Sucré, a seedling of this, which originated near Montreal, is said to resemble its parent in many respects and to be more prolific. It is not, however, offered for sale by nurserymen in general. . . . . .

THE London Garden republishes our cut of Fay's Prolific Currant and the accompanying article. The editor remarks in a note that this currant is not, he believes, in commerce in England, but that as it has been so long in cultivation in America, "some of the large nurserymen doubtless possess it." No, it is not yet offered for sale. It has been cultivated by Mr. Fay, with whom it originated, for many years. The stock is now controlled by Mr. Josselyn, of Fredonia, N. Y., who will offer it for sale as soon as his stock warrants him in doing so. . . . . .

Mr. H. B. ELLWANGER pronounces the Lady Washington one of the most beautiful grapes known. . . . . .

WE see that our friend, Mr. Peter Henderson, is advertising his St. Patrick Potato in English journals. The price to the trade is 24s. or about $6.00 per barrel of 160 pounds. . .

A GRAND novelty in the way of vegetables was offered last Spring under the sounding name of "Thousand-Headed Kale," "Chou de Russie," or "Russian Hardy Kale." Three seedsmen were kind enough to send us seed for trial and—we tried it. It has nothing to commend it and we hope it will not be offered another year. The leaves are large, spreading and deeply cut. Each plant made a growth of about two feet in hight and nearly three in width. It might prove a good food for pigs or cattle, but not better than cabbage which is just as easily grown. Why it should be called "Thousand Headed" is inexplicable, since, like other kales, it doesn't head at all. Would it not be better for all seedsmen (as many do) to test such costly, though worthless, novelties before offering them for sale? . . . .

Mr. A. B. ALLEN writes us: "I am glad you condemned Prickley Comfrey. I tried it three years ago and did the same." He also remarks: "What the Mark Lane Express says, quoted by you, against Percheron horses (p. 802) is all wrong and many a good English judge of horses has said for 40 years past in British journals that they are far superior to Clydesdales. . . . . .

MARSHALL P. WILDER'S statement in another column that under circumstances which he presents, nine out of eleven connoisseurs preferred the Lindley Grape (Rogers's Hybrid) to the Delaware, is an interesting and valuable fact. . . . . .

MANY thanks to Mr. Charles Deckner, of Atlanta, Ga., for a little box of strawberries which, notwithstanding their long journey, are still of a bright red color, and of fair quality. If there is one fruit a little more delicious than another it is a well-ripened strawberry in Midwinter. . . . . .

WE have just been reading an oleomargarine advertisement in a city weekly contemporary. OLEOMARGARINE in immense letters extends across the entire page. "If you have a trade for fine goods," it goes on, "only try our x, y, z brand, which we guarantee pure and the finest product ever produced in this country. WARRANTED NOT TO CRUMBLE. For sale by all jobbers." . . . . .

WE have received the following letter from Mr. J. H. Hale, of South Glastonbury, Coun. It rather gives strength than otherwise to our remarks respecting the proneness of people in general to exaggerate the size of favorite small fruits, especially when the actual size is itself a sufficient commendation. . . . .

"IN the RURAL of Dec. 4th, in the "Notes from the Rural Grounds," it is stated that raspberries rarely attain the size of one inch in diameter, and that the size of large specimens of fruit is usually guessed at, which I know is the fact; nevertheless, I will tell my little story: Two years ago we planted a part of an old muck swamp (that had the year before 25 cords of stable manure per acre) with the Gregg Black-cap, in rows ten feet apart with plants six feet in the row, hoeing them once a week all through the season. The following Spring we tied them up to stakes and then hoed in a double handful of bone and muriate of potash around each plant. The result at fruiting time was astonishing, as we picked from four to six quarts of berries from each plant, and by actual measure 30 berries from one plant were three-quarters of an inch and over in diameter, and on every plant there were, from eight to ten that were a good plump inch. There were 200 plants in all, and from the field we sold 986 quarts, besides what were used in our family of eight persons. The price was 20 cents per quart for the season, or $197.20 for the lot. At the same time Mammoth Cluster were selling in our Hartford market at 10 and 12 cents." . . . . .

THE Gregg is now generally conceded to be one of the largest Black-caps (if not the largest) in cultivation. Planted in an old muck swamp that the year before had received 25 cords of stable manure per acre, ten by six feet apart; and hoed once a week through the season and treated to a handful of bone and potash—is it surprising that from eight to ten berries on each plant should have measured "a good, plump inch?" If *ever* Black-caps attain to such a size, we should say not. It would appear, in fact, that a "plump inch" may be set down as the maximum diameter of the Black-cap raspberries. . . . . .

WHAT OTHERS SAY.

EARS OF WHEAT ON AN ACRE.—In answer to a question the agricultural editor of the N. Y. Times says that the usual number of ears of wheat grown upon an acre of ground is about 1,250,000, and this number varies but little, whatever quantity of seed is sown. Major Halles, an English seed-grower, who has produced some excellent varieties of wheat, gives the following statement on this point:

Seed sown per acre. Bushels.	Ears on a square yard.	Ears on an acre.
1	283	1,272,290
2	283	1,367,920
3	265	1,282,600
2	270	1,306,800
3	269	1,301,960

ASPARAGUS CULTURE IN FRANCE.—Some of our readers—those who have had a long experience in asparagus culture—will smile at some parts of the following. It may be remembered the Argenteuil is the name which we have given as one of the kinds offered in our Distribution, not that there is *one* kind known by this name, but there are several sub-varieties cultivated in that district which is famous for its asparagus. At the meeting of the International Congress of Horticulture in Paris, M. L' Herault, of Argenteuil, gave the following account of his method of culture of this popular vegetable, reproduced in the lately published Bulletin of the Congress:—

"I will not speak of the ten sorts of asparagus that I am acquainted with—of their varieties, nor of their twenty-five sub-varieties that I have experimented upon from every country. I will content myself by saying, that, in 1856, after four or five years of experiments, I thought it well to select three varieties, viz., the early, the intermediate, and the late. After sixteen years of cultivation the Central Horticultural Society of France acknowledged the superiority of these varieties, and accorded to me an award. The asparagus plants must be planted near the surface of the soil, contrary to the general custom; and, also contrary to the general practice, they should also be planted wide apart. They must be earthed-up in Spring to have them tender and white. Earthing-up is absolutely necessary, not only from a culinary point of view, but as a natural protection for the shoots, and to prevent the asparagus from being blown over by the wind. That is the object fulfilled by the mound of earth in the culture of asparagus. Afterwards, when the leaves appear, it is necessary to tie the asparagus to stakes. This protection is of great importance, for when the wind knocks over the asparagus it breaks and splits the stems, so that there is no hope of saving them.

"The method of culture of asparagus may be thus summed up:—Plant them very near the surface of the soil, earth them up in Spring, cut them moderately. As to the gathering of asparagus let me say that no steel instruments should be employed, but the fingers alone should be used, for otherwise there is a great risk of damaging the neighboring shoots and spoiling a great part of the crop."

PLEURO-PNEUMONIA IN OUR EXPORTED CATTLE.—The British Privy Council, by whose order the present restrictions were placed on importations of American cattle, has a staff of picked veterinarians at each port at which cattle from foreign countries are landed, and it is the duty of these to examine the animals both before and after death to discover how many of them are diseased, and the nature of that disease with a view of making, periodically, detailed reports on the subject. It is on these reports that the embargo on our cattle was originally established and it is on these reports that it is maintained. Away back in '79, just after the enforcement of the restrictions, Professor Williams, Principal of the New Veterinary College of Edinburgh, and last year President of the Royal College of Veterinary Surgeons of Great Britain, one of the most skillful and best known veterinarians in the United Kingdom, after a careful examination of the diseased lungs of the imported cattle slaughtered at Liverpool—or rather at Birkenhead in Cheshire on the opposite side of the Mersey, where most of the stock from this country is landed—declared that the official veterinarians had made a mistake in their diagnosis of the disease, and that instead of its being contagious pleuro-pneumonia as they claimed, it was simply ordinary non-contagious pneumonia developed during the voyage, and therefore that the Orders in Council prohibiting the importation of American cattle unless slaughtered at the port of landing, were founded on a mistake. This opinion we noticed at the time, but although some of our agricultural contemporaries seemed to deem it conclusive, not only with regard to the nature of the disease of the cattle slaughtered at Liverpool, but also as to the non-existence of pleuro-pneumonia among any of our herds, the British Government took no official notice of it.

LAST Summer Gen. Le Duc sent Mr. Lyman, a skilled veterinarian, to England to ascertain by post-mortem examination, whether animals infected with pleuro-pneumonia were actually landed there. Having examined the lungs of over 10,000 imported animals slaughtered, he reported last July that he found many infected with pleuro-pneumonia; that the disease was *in most cases* fresh; that the lungs were but slightly affected, and that three-fourths of the cases were Western Cattle imported from Boston. Lately President Williams, in an address before the students of his college, referring to Mr. Lyman's report, reiterated his former opinion that the disease with which the slaughtered animals were infected was not pleuro-pneumonia but bronchitis, brought on by the vicissitudes of the voyage, giving various reasons for his opinion. It seems to us that some of our agricultural papers lay by far too much stress upon this opinion of Prof. Williams. The best talent of his own country do not agree with him; the best talent of ours declare that genuine pleuro is among a few of our herds in a strip of country stretching from Western Mass., to Southern New Jersey, taking in nearly the whole of the latter State, and extending nearly the whole way across Pennsylvania and Maryland in a narrow belt along the line of these States, and then running southward across the District of Columbia into Virginia. It is highly probable, as we insisted eighteen months ago, that mistakes have been made by the British veterinarians in diagnosing the disease from which imported American cattle were suffering, especially as it is claimed that so many of them came from the West where the disease has not yet shown itself—but, as no modification of the restrictions will be made on account of these probable mistakes, what good can we achieve by making such a hubbub about them?

STAMPING OUT PLEURO-PNEUMONIA IN PENNSYLVANIA.—The following is an account of the total expenses incurred by Pennsylvania on the above account, from March 30, '79, to November 30, '80, according to a communication to the National Live Stock Journal from J. W. Gadsden. V. S.

ITEMS.	
For Animals killed by order	$3,164.25
Surgeons' fees and expenses	1,743 57
Salary and traveling expenses, special ag't	1,705.09
Expenses of commission	313.21
Office expenses, stationary, postage, etc.	273.84
Expenses under joint resolution	147.32
Total	$7,332.28
Cash received per State Treasury	6,964 18
Balance	$368.10

For slaughtered animals the owners receive somewhat less than half what their value would be if in good health. The State would have long ago succeeded in entirely suppressing the disease were it not that new cases are from time to time introduced from Maryland, where although the laws on the subject are excellent, no attempt seems to be made to enforce them. With one exception all the cases discovered in the last six months were due to importation from that State, and fully two-thirds of the total money expended in Penn. is chargeable to Maryland's neglect. The New Jersey authorities co-operate heartily with those of Penn., and no case of infection in the latter State has been traced to the former.

ADVICE TO SHIPPERS OF HOGS.—A Chicago commission salesman who has twelve years' practical experience in handling hogs in that market, gives the advice here condensed, which is equally applicable to shipping hogs to other markets also:

If hogs are driven to the depot the farm dogs should be first securely chained before starting them on the road. Haste should be made very slowly in driving. They should be started early without feeding from the evening before, and should not show any signs of uneasiness, or stop frequently for a resting; better by far take one more day and handle them safely. Over-heating founders them at once, or as soon as cooled down. If the delivery be made by teams, there should be no feeding that day; the wagon should be bedded deeply with dry hay or straw, and the teams move slowly with occasional stops, that they may rest from the jolting. When the hogs have been collected in the shipping yard without having been over-heated, and are well rested, weigh out 15,000 to 17,000 pounds of heavy hogs, according to the kind and size of car; of mixed weights, 14,000 to 16,000 pounds; handle carefully, without more "whoop and hurrah" than is necessary to move them. If there are no scales in the yard on which to weigh, count off and estimate the average weight for each car until you have your quota for a load, then bed each car with at least 400 pounds of dry hay or straw. If your hogs are loaded the same day they came from the feed yard where they were grown, do not feed any grain. Water if thirsty. They will find the new quarters comfortable and all will quietly settle down for a nap and the waking will not take place until their arrival at the market, whether it is one day or one day and night, or even two or three days. After 500 miles of constant run they will be in comfortable condition on arrival, without even a cripple to injure your interests. Hogs should not be unloaded during the colder seasons of the year oftener than once in forty-eight hours, if their comfort is only considered.

THE FAMEUSE OR SNOW APPLE.—Apples abounding in acidity are liable to derange the stomach, and a mild, sub-acid flavor is undoubtedly the most pleasant as well as the one best calculated to promote digestion. Mr. Barry, writing in the Albany Cultivator, is reminded of this fact by the handsome and excellent Fameuse or Snow apples, which we are enjoying, and which he is glad to say are tolerably abundant in this market. This variety, more than any other that he knows, possesses qualities which commend it, not only to all who enjoy fine fruit, but more especially to persons who suffer from indigestion. It is a beautiful fruit of medium size; the skin is of a purplish-crimson color, its flesh is as white as snow, tender and delicate, and the flavor very pleasant, with just enough acidity to render it exceedingly refreshing. Now as fruit has come to be regarded as so valuable an adjunct to other food and so conducive to health, there are many no doubt searching after the choicest kinds, and he recommends this as one of the finest fruits of its season.

HEREFORDS.—The great merits of the Herefords, a writer in the London Live Stock Journal states, are a robust constitution, early maturity, great aptitude to fatten, freedom from hereditary and epidemic disease, being able to thrive in any climate and on the roughest food, great prolificness, and general good breeding properties, wanting little attention at calving, even when in high condition, the best graziers, and commanding the best price per pound when fed. Their doubtful qualities, or rather the points in which many people say they fail are their milking qualities, their color, and their inability to improve other breeds by crossing; it has been also said that other cattle will feed better in the stalls, and attain to greater weights. It is said that the Herefords will never become the fashion, as the ladies do not like their white faces! The same writer above quoted hears the fashion has changed in America, and that at all the recent cattle shows the ladies all congregated around the "White-faces," as much from the novelty of the scene as from anything else, perhaps; but he thinks that the practical American ladies, when they find that the White-faces are a source of profit to their "lords and masters" (and therefore of a considerable advantage to themselves), will soon vote their color perfection, and the Hereford will be the prevailing fashion.

EXERCISE FOR COWS.—In the Agricultural Department of the New York Tribune, our friend, Colonel Curtis, has this to say on this subject: It is a wrong notion that cattle must be kept in a barnyard all day, or a part of a day, to get exercise. How much exercise will they take during the entire day? Just enough to get from one pile of fodder to another, or to find, if they can, a warm spot to stand on. If you don't believe this, watch a cow and see. Fasten cattle in the stable so they can get up and down easily, and this is all the exercise they require. You see these cattle are fastened with a chain, and they can move around freely and lick themselves and get up and down without straining. This is one reason why they are so healthy. Stanchions make more straining for them. He will

not have them in his stable; he thinks they are cruel.

THE INFLUENCE OF AGE UPON THE QUALITY of beef has been discussed somewhat in the last two numbers of the National Live Stock Journal. The conclusions arrived at are that in the British markets cattle generally are killed too young for the best flavor—say when from 18 to 30 months old. Moreover, they are fed on turnips and oil-cake, which as regards the flavor of the meat, are far inferior to corn, hay and grass. But there farmers cannot afford to keep their stock until it matures on hay and grass; to make a profit they must force it with the more nutritious foods. Immature beef, though perhaps more tender than the flesh of well-matured beasts, is inferior in juiciness and flavor. This is an argument in favor of those breeds that mature early, for the earlier they mature the sooner will they give a superior quality of flesh. A well-bred Short-horn steer is often as mature at 30 months as some other sorts at 48 or 60 months. There is a limit, however, both to earliness of maturity as well as to the extent to which we can force feeding without impairing the quality of the flesh. The West Highland beef, so much prized in England, is produced by grazing alone until the beasts are four or five years old.

MR. JOSEPH HARRIS, speaking of the experiments of Mr. Lawes, of Rothamsted, England, in connection with establishing an experiment station in the State of New York, said he had devoted his farm to experiments, had entailed it upon his son for such purposes, and had in addition appropriated $500,000 for carrying on agricultural experiments. A wealthy Duke (the Duke of Bedford—EDS.) had given his farm at Woburn to the Royal Agricultural Society to be devoted to like beneficent purposes.

MR. REYNOLDS, following Mr. Harris in the discussions of the Corning Farmers' Club, as reported in the Rural Home, said that to make an experiment farm successful, it would require the co-operation of scientists with practical farmers. Farmers are continually experimenting, but the results are of little value, comparatively, because they attribute effects to wrong causes. For these reasons farmers gain knowledge from experience very slowly. One farmer will tell you that a certain experiment, tried by him, resulted so and so. Another will say that the same experiment, tried by him, produced results directly antagonistic to those related by the other. Both are honest and truthful, but neither observed all the conditions and circumstances affecting his experiments, and so they are worthless as a guide to themselves or others. To properly establish such a farm with professors in the different branches of science related to agriculture, and the proper instruments, would require hundreds of thousands of dollars instead of the $20,000 appropriated by the Legislature.

MR. W. J. FOWLER, said that as regards experimental stations, practical farmers are beginning to learn their value. Those English experiments are of great value to the farmers of this country. We profit by experiments that result in loss as well as those which result in profit direct. Mr. Lawes has cultivated barley many successive years on the same plot, without manure, and the small diminution in yield shows that Nature furnishes a large share of what crops need to grow.

CATALOGUES, ETC., RECEIVED.

THE HARVARD UNIVERSITY CATALOGUE FOR 1880-81.—In this catalogue of 230 pages, the information regarding the Bussey Institution—which is a branch of the University, of which our contributor, Prof. F. H. Storer, is the Dean and Professor of Agricultural Chemistry—will be of special interest to farmers. In this School of Agriculture and Horticulture a systematic course of instruction in agriculture, useful and ornamental gardening and stock raising is given by teachers of the highest character in their several departments. The courses of study differ from those pursued in the ordinary agricultural colleges in that they are all given in one year, so that they may all be profitably pursued by young men of ability who cannot afford to spare much time for advanced study. In addition to the courses given at the Institution, students in regular standing there may freely attend any of the 200 courses of instruction in the other departments of the University, and in addition to the free use of the special agricultural library of the Institution, they can also freely avail themselves of the College Library at Cambridge and the Boston Public Library. The regular fee for the academic year is $150; for half a year or less, $75, and for any one of the special courses the fee is $40, except entomology, for which the fee is only $30. The students can live where they please in the neighborhood, at an estimated expense of from $218 to $370 a year—exclusive of clothing.

MODERN ARCHITECTURE.—This is part I. of a very fine quarto work to be completed in ten numbers, costing a dollar each, by Messrs. Bicknell & Comstock, architectural publishers, 194 Broadway, this city. The completed work will contain 80 fine lithographed plates, showing new and original designs of dwellings of moderate cost, in the Queen Anne, Eastlake, Elizabethan, and other modernized styles, giving perspective views, floors and framing plans, elevations and a great variety of miscellaneous exterior and interior details of dwellings, stores, offices, etc. There will also be a number of designs of low-priced cottages in the various popular styles adapted to the requirements of seaside and Summer resorts and suburban and country places, comprising drawings by prominent architects of New York, Boston and other localities, as well as other designs prepared expressly for this work. We have received frequent inquiries as to where such a practical work as this could be obtained, and urge all those contemplating the erection of new homes to subscribe for it. Not only will it suggest the most desirable styles of building suitable for all locations and pockets, but the drawings and instructions will be so full and detailed as to enable any intelligent builder to construct most of the edifices without the expense of an architect. It is a work greatly needed and excellently adapted to the requirements of the times.

REPORT OF THE UNITED STATES COMMISSION OF FISH AND FISHERIES FOR 1878.—This bulky volume of 988 pages contains a great mass of useful information with regard to the subject of which it treats.

FRANCIS BRILL, Mattituck, Long Island, N. Y.—Preliminary price list of garden seeds which Mr. Brill himself raises.

Everywhere.

NOTES FROM TEXAS.

THE past season has been an unfavorable one in some respects and very good in others.

COTTON grew finely and promised well—even over an average—when unexpectedly came the "boll worm" and made havoc with the cotton and man's "high hopes." Some farms in low and rich bottom land that promised at one time a bale per acre, did not turn out a quarter of a bale.

WHEAT in prospect and result was something like the last crop spoken of—excellent at first, but yielding below the average. The straw was long and good enough, but the damp weather in April caused rust, so that we might place the crop at ten bushels per acre for Mediterranean and eight for Texas May. There is a new wheat I am trying, called the Davis, that may do well here as it is early and has a large grain, although the two snows in November turned its color to some extent.

CORN was a splendid crop—the best ever raised in this State. Some farmers report 60 bushels per acre. It is now selling at 25 cents per bushel. We shall repay Kansas this year for the immense quantities bought of her last season. It is heavy, solid corn—such as we farmers like to feed to "big hogs" and beeves.

GOLDEN MILLET yielded 7¼ tons per acre of excellent feed, and was all put up in good style.

PRICES are as follows—cotton 10@11c; wheat $1 per bushel; corn 25@30c; pork 6@6¼; beef 4½@7c; eggs 15c per dozen; chickens 16⅔.

McKinney, Colin Co., Texas. W. N. W.

RURAL SPECIAL REPORTS.

GA., Atlanta, Fulton Co., Dec. 2.—We are having some disagreeable weather; it seems to have been raining every day for the last four weeks, and when fair it has been frosty, the temperature going as low as 10 degrees below freezing point, and all tender vegetation is now killed. The late strawberries, however, are not all killed. Farmers are pretty well up with their work; sweet potatoes are nearly all dug; but we have not quite finished sowing wheat. Crops of all kinds have been heavy; cotton and corn have yielded above an average. A larger crop of sweet potatoes has been grown this year than in any year in the past ten. They are selling at 35 and 40c. per bushel. Winter grain of all descriptions is looking fine. Farmers are doing well and business is flourishing. C. D.

N. C., Chapel Hill, Orange Co., Nov. 27.—The year has made its report. The wheat crop was probably about the average; the oat crop below. Tobacco was less in quantity than usual, but excellent in quality. Corn was the best yield in years. Sweet potatoes were a fair crop; Irish potatoes, much below an average yield. In fruit, there was a tolerably good product of peaches, and comparatively a very fine crop of apples. Plenty of forage. Cattle enter the Winter in good condition. Providence has been bountiful. Let the people of our favored land be grateful!

Among the notable features of the year in agricultural and kindred departments, I will mention that the earth has produced its harvests with astonishingly slight resources of the kind generally considered so important. I refer to the fact that after the Spring of 1879 there was such a light rainfall. This continued till very recently. While wells and springs were going dry, surface moisture from occasional showers kept vegetation for a long time fresh and flourishing. Now the rains are so frequent that the farmers are greatly embarrassed in their efforts to sow wheat. The earth is again, after the unprecedentedly long season of comparative drought, receiving its wonted supply of water.

The State Fair and several local fairs have held successful meetings. Unfortunately, as usual, the lovers of gambling, in the form of racing, offended and disgusted the taste of the better classes among the attendants. If there is not a change in these matters Christian people ought to withdraw their countenance and patronage from the demoralizing institutions.

N. C.

N. Y., Syracuse, Onondaga Co., Dec. 4.—Prior to the 10th of November the weather in this section seemed so gradually merging into Winter, that it appeared we were to have no Autumn. All kinds of out-door work were being finished up under the most favorable auspices. The shipments of freight on the canal indicated the general faith in a late business season before Winter could make its advent perceptible. Wheat looked and promised well; stock were making good use of the pasturage, and the farmers were gathering in the butter harvest most successfully. Winter then fell upon us like a thief in the night. During the last three weeks we have had the thermometer down to zero, and snow squalls have been constant. Some ten inches of snow have fallen altogether, and as there has been no thawing the sleighing is very good, wheels having disappeared wholly from the streets. Derived from the evaporation from the lakes, a strip of country between this and Oswego has had more than three feet of snow. Prices for country produce have a constant upward tendency, though perhaps no higher than last year at this time. The rainfall for October was 3.07 inches, 2.07 of which came on the last day of the month. That for November was 0.83. The surface of the ground has been kept tolerably moist, but wells and streams are too low for a sufficient Winter supply. S.

OHIO, Delaware.—The following note from Geo. W. Campbell, now acting Secretary of the Ohio Horticultural Society, since Mr. Bateham's death, was crowded out last week: "We have now had nearly three weeks of severe Winter weather, the thermometer ranging from the freezing point to 18° below zero during the whole time, and the ground is covered with snow. It is now moderating, with prospects of a thaw. It has been the coldest weather ever known here in November, as the thermometer was during the past three weeks at 15° below zero four or five times. I find grape buds somewhat injured upon hybrid and half-hardy kinds. Peach buds unhurt so far."

OHIO, Wellington, Lorain Co., Dec. 2.—We are having very cold weather; on the morning of the 19th, the thermometer was 15 deg. below zero. About four inches of snow are now on the ground. Crops of nearly all kinds were good the past Fall, oats being nearly the poorest in quantity and quality. They are worth 35c per bushel; wheat, $1; corn, 40c; clover seed, $3.75; eggs, 22c; butter, 24c; cheese, 13c. A. G. F.

The Querist.

ANSWERS TO CORRESPONDENTS.

Cows Chewing Bones—Hard Water.

J. S., Urbana, Kan., 1. says that his cows and in fact nearly all the cattle in that prairie region will eagerly pick up any piece of bone, or a stone or piece of iron, and chew it for an hour or two, as if masticating it; but they will finally drop it, without having made any apparent impression upon it; and as he never saw cattle do this in Ohio, he asks the reason for their doing so in Kansas. 2. He has a well the water of which is so hard that it cannot by any means known to him be softened for washing, and he asks how can it be rendered fit for that purpose.

ANS.—1. This morbid appetite of the cows seems to indicate a want of phosphate of lime in the soil; but as that county is largely underlaid with limestone and is fertile for corn, wheat and grass, it might naturally be inferred that it contained a sufficiency of this important element to grow healthful crops for cattle. As bituminous coal is found there, if our correspondent will pulverize some of this coal fine and mix a tablespoonful of it with the food of each cow once in ten days, he will be most likely to find it to satisfy this morbid appetite for chewing bones, or half a spoonful of the ashes of this coal will do as well. Some coal ashes contain as high as three per cent of phosphoric acid. If this should not effect the purpose, send to St. Louis and get the pure flour of bone, or bone meal, and mix a spoonful of this with the food. But this bone meal should be thoroughly boiled before using it, so as to kill all spores that it may contain.

2. Hard water is not easily made soft, and especially such very hard water as our friend describes. In England they expel lime with lime. Pure limestone is carbonate of lime, each pound of carbonate of lime containing nine ounces of lime and seven ounces of carbonic acid. They determine the amount of lime in a given quantity of water and then apply to it the same amount of burnt lime dissolved in water. When lime is burned the carbonic acid is driven off, and each pound of limestone weighs only nine ounces, after burning. When this burnt lime is mixed in the right proportion with the hard water, it will cause nearly all the lime in the water to settle to the bottom, and the soft water may be poured off of the top. The only way in the above case would be to experiment and find the right proportion. Powdered borax is sometimes used to soften the water. Wood ashes are also used, which cause a precipitation of the lime to the bottom, when the water may be poured off and will be found much softened. J. S., should make a filter of a tight barrel, having a hole in the center of one end, and then one inch above this put a false bottom, perforated with small holes. Lay thick flannel over this and then upon the flannel two or three inches of washed sand; upon the sand place six inches of fine wood charcoal, or fine bituminous coal, well washed, and on the coal three inches of clean gravel. Now pour in the water on top, and let it filter through and it will be much improved for drinking or washing. It may not be quite soft, but it will be much less hard.

Miscellaneous.

A. G. F., Wellington, Ohio, asks whether it is advisable to sell his clover seed at from $3.75 to $4 now or wait in hopes of getting a better price in Spring.

ANS.—As shown by our Crop Reports and in various places in "Everywhere," the crop of clover seed is considerably short this year owing to so much of the clover having been "heaved" out by the alternate thawings and freezings of last Winter. Our Market Reports last Winter and Spring showed the price for seed varied at the different collecting centers, and the variations were, doubtless, still greater in small local markets in which the farmer usually sells his products, especially in small lots. For ourselves we would prefer, in our friend's position, to take $4 for the seed now rather than wait until Spring on the chance of getting a higher figure, nor would we then regret having done so, even if the price were considerably higher. In case of risk, the satisfaction of being all along, on the safe side is worth something.

C. H. J., Fernandina, Fla., asks, 1, whether the Stockbridge Fertilizers manufactured by W. H. Bowker, of this city, are as represented; 2, would it be advisable to apply 400 pounds of Stockbridge Potato Fertilizer, costing $2, on an acre of potatoes, using no other manure; 3, are Mapes's Fertilizers as good, according to price, as the Stockbridge; 4, can a good crop of potatoes be obtained from land manured with green salt-marsh grass put in the drill at the time of planting?

ANS.—1, Entirely so. 3, We should prefer not to advise on such a subject, because the effect of the manure would depend upon conditions that we know nothing about. 3. Both are first-class articles, and the values, according to analysis and the cost, are about the same. 4, No. The grass would not have time to decompose. A large amount of such a manure would be required to produce "a good crop of potatoes."

A Subscriber, Wright Co., Ia., asks the address of some good authority on bee-keeping.

ANS.—Professor A. J. Cook, Michigan Agricultural College, Lansing, Mich.; J. G. Bingham, McGrawville, N. Y.; G. W. House, Fayetteville, N. Y.; C. M. Doolittle, Borodino, N. Y. If books are wanted, The Manual of the Apiary, by Prof. Cook, is as good as any published. Price, $1; published by T. G. Newman & Son, Chicago, Ill.

THE
Rural New-Yorker,
PUBLISHED EVERY SATURDAY.

Conducted by
ELBERT S. CARMAN.

Address
THE RURAL NEW-YORKER,
No. 34 PARK ROW, NEW YORK.

SATURDAY, DEC. 18, 1880.

SPECIAL NOTICES.

AS ALREADY announced, the SPECIAL CORN NUMBER of the RURAL NEW-YORKER will be the first of the New Year.

WE SHALL present our annual INDEX next week. Special pains have been taken to render it accurate and full, so as to facilitate a quick reference to any article in the present volume. Few are aware of the immense amount of labor involved in *properly* compiling and arranging an annual index of such proportions; but those who have occasion to use them frequently are aware of their great value.

SUBSCRIBERS who receive the RURAL without any NUMBER appended to their names or address, may know that their subscription terms expire *with* the Index Number.

OUR PRESENT Plant and Seed Distribution will be begun about January 15th and continued until further notice. The WHITE ELEPHANT Potato will be mailed separately in a little wooden box as the weather permits. Subscribers are advised to place it in sand and keep it in a temperature as near 32° as practicable.

AT present there is almost a grain blockade at the Eastern termini of all the trunk lines, while at many of the way stations the facilities for handling the crops are altogether inadequate. Among the many needed reformations in railroad management an improvement in this respect is not the least desideratum.

READERS of the RURAL, when you communicate with advertisers mention the RURAL NEW-YORKER, and if any article purchased should not prove to be as represented TELL US. We desire to have our advertising columns *trustworthy*, and we shall be glad to entertain any complaint and to ascertain, by searching inquiry, to what extent it may be well founded. We place the interest of our readers far above those of merely mercenary advertisers, and we shall strive in every way to make it appear that these columns are to be shunned by all who have reason to dread the light of truth and justice.

WHAT IS GLUCOSE?—The establishment of several factories, and the great profits in its production lead to this inquiry. The cost of a factory may be anywhere from $10,000 to $300,000. One costing $100,000 should use 1,000 bushels of corn a day, and the production of glucose should be simply enormous, for the greater portion of the corn is saved. There is no process by which glucose and starch may both be obtained, but either may be, although there is a greater weight of refuse in starch making than in glucose making. The process of making glucose is to grind the corn and soak it in pure water. It is then passed through rollers to extract all the moisture and starch. The extract is then boiled, and after it is purified it becomes, according to the treatment, either a sirup or glucose—a hard, waxy substance nearly as sweet as sugar. The refuse corn is sold for feed.

THE ARMY WORM of which we give an illustrated account on p. 832, appeared, our readers will remember, in vast numbers at the Rural Farm last Summer. The RURAL was, indeed, the first agricultural paper to make the announcement of the appearance of this pest in this part of the country. Of all food, it preferred the heads of Timothy. In the infested belt of our farm, scarcely a Timothy head was left—the straight pointed straw alone remaining. While the wheat was in the milk stage, the army worm preferred the grain to the leaves. As soon, however, as the milk stiffened a little, the leaves were preferred and the grain was no longer molested. It is remarkable, as showing the ways of this worm, that while some fields of wheat and grass were alive with it, scarcely a worm could be found upon other fields. It is to be hoped that the auguries of entomologists may prove true and that we shall not have another march of the army worm during the Summer of 1881.

THE VETERINARY SURGEONS attached to the Health Department report ten cases of pleuro-pneumonia in one stable, containing fourteen cows, in Brooklyn. The other four beasts are extremely emaciated, and the officers declare they do not think that the milk of any animal in the stable is fit for human consumption. The filthy stable is twenty feet in the rear of a densely crowded tenement house, and the neighborhood is thickly populated. There are several cow stables in this and the neighboring cities of which a similar report might be made. These are the hot-beds of disease from which emanate frequent deaths to children and others who use the milk from them, while they are a constant menace to the herds of the country. In view of the difficulty of maintaining cleanliness and health in such places, and of the evils of disease and filth there, why should these pest-holes be longer tolerated, especially as every town has now ample facilities for obtaining an abundant supply of milk from the country?

IT is a recurring practice every Fall for many papers to find fault with Western farmers for not sending their grain more quickly to market, and this year these croakers have been unusually loud in their complaints, attributing the delay to a desire on the part of the grangers to obtain better than the current prices for their produce, an expectation fostered by the great rise in prices of wheat last year after most "of the crop had got into the hands of dealers and speculators." There is little doubt but this consideration had some influence on the action of farmers early in the season, although as we pointed out a couple of months ago, there has been this year no signs of the speculative movement to which the rapid advance in the price of wheat was due last season; but the main reason for the delay in marketing the crop early was the unfavorable weather for thrashing, and when the farmers were ready to deliver their grain they were hampered by a scarcity of railroad cars and elevator room, which has gone on increasing to the present time.

THE JAPAN JUDAS TREE.—A specimen of this has been growing in the Rural Grounds for six or seven years. It is generally harmed more of less by Winter and early Spring storms and sudden changes, but the wood has never been killed within a foot of the ground. It is with us a great favorite, and Mr. Parsons's article says not one word too much in its praise. It has needed no cutting back such as is recommended by Mr. Parsons, to preserve a full, bushy shape, since it is often enough harmed by severe weather to make pruning quite unnecessary. Before the leaf buds unfold, the beautiful clusters of purplish-pink flowers appear wreathing the stems. These flowers bloom in early May, dozens of them together nearly an inch broad or long. Never until last season have the flowers with us produced seeds, when they were produced so abundantly that we picked a peck of pods from this single bush. The seeds germinate very readily and, so far as our own experience goes, the seedlings do not vary in leaf or flower from the species. Our engraving on page 833 is a very correct portrait of the leaf and fruit as they appeared in October.

CLOVER SEED is likely to be unusually high-priced this year, as the crop seems to have been short nearly everywhere. Toledo, Ohio, is the headquarters of the trade and probably the largest market in the country. A late telegram from that place predicts a "corner" in clover seed there, which, if formed, must raise the prices elsewhere also. The stock now held is reported to be not over 6,000 bags of old and 4,000 bags of new clover seed, the former being practically out of the market, and most of the latter in the hands of a couple of firms, who are said to be determined to hold on to it until they get their own prices, buying in all that may be offered, so as to get control of the market. While a capital of millions of dollars is needed to "corner" wheat, pork or dairy products, less than $100,000 would be sufficient to "corner" clover seed. Last Tuesday the price of prime medium seed on 'Change was $5, and the tendency was upward. The "heaving" of clover last Winter will not only lower the supply and thus raise the price, but also increase the demand, as it is likely that an unusually large area will be sown next Spring. Farmers who have to buy seed as well as those who have to use it, should not lose sight of these considerations.

CLEANLINESS AND HEALTH.

THE alarming spread of diphtheria and kindred diseases is a warning to the people of the United States, of which they cannot long neglect to take heed. In many cities and towns diphtheria now exists almost to the extent of becoming epidemic, while there are few sections of the country entirely exempt from its ravages.

It is believed that the first cause of the disease is the preparation of the system by the presence of impure air for the germs of the disease to take effect, while these germs are believed to be multiplied by this impure air. The best houses of the cities, where there is a tide flow, are liable to the disease because the sewer connections are in the house, and cannot easily be so secure but that the gas is forced by the bellows of the tide back into them. This is also the case with dwellings in cities where high water fills the sewers, or into which from other courses the sewer gas escapes.

Upon the farm and in villages the disease is propagated by the impure air from cess pools and other sources. The germs of the disease are not destroyed by the frost as with those of yellow fever, and the only safety is in a complete removal of all impurities from the vicinity of the dwellings, and not only this but the filth must be entirely deodorized and rendered innocuous.

In the cities the sewer may be made a complete carriage way to a place of safety. In the villages and upon the farm the remedy can be made the means of adding largely to the fertilizing element of the country as well as securing health. The farmer and the village improvement societies should take this work in their especial charge.

PECUNIARY INDEPENDENCE.

There are two millions of persons in France who live quietly and moderately upon their incomes from investments in real estate or other property. In England there are probably half as many, who live in a simple and unostentatious manner under the same circumstances. The English Government funds known as "consols" in the technical terms of the money market, pay three per cent. per annum; the French "rentes" pay about the same rate of interest. The average income from these sources to each owner of these funds is not more than $300 per annum, and on this amount thousands of persons live simple and contented lives, enjoying in a modest, unassuming manner the fruits of their carefulness and economy.

A French "rentier," or an English owner of "the funds," or a person who may be possessed of real estate, occupied or rented, enjoys a certain social distinction on account of his "independence," to which term there attaches a distinct idea of certainty of income with the assurance of a competency and freedom from the cares and inconveniences of poverty or embarrassment. So long as these persons live within their incomes, they are privileged persons in an easy and well-defined position; persons of moderate fortune who can afford to look upon their front door as secure from the possible presence of the typical "wolf," which is the dread of all those who live by uncertain employments. But without the strictest plainness and economy of living, all these people would become "of all men the most miserable." Their property saved by years of industry and economy, would soon disappear and leave them, in their old age, in poverty and wretchedness. Few of them, knowing their security and realizing their comfort, are tempted to risk their income in the hope of increasing the rate of interest by riskful investments or speculations.

How fortunate it must be for Americans if they would but take a lesson from such examples as these! What misfortunes, what losses, what disappointments and even miseries would be avoided by a more contented disposition, more devotion to simplicity of life and economy of living? What secure friendships, what continued social pleasures, what permanent family affections and happiness in our home lives could be enjoyed, if people were only more contented with their present fortunes and the modest enjoyment of what they now have in secure possession? The foul demon of speculation keeps us all in a turmoil; society seethes and bubbles over with the excitement due to the constant race for riches; to the struggling pursuit of more wealth. This is common to all classes. Farmers and country dwellers are tempted to send their small savings to be swallowed up in the whirlpool of speculations in the cities, in the vain hope of acquiring riches that have never existed, and which they can no more secure than they could grasp a shadow. The business man and the man who possesses already a snug competence, haste to throw their property away in the same foolish manner to be swallowed up in the bottomless maw of speculation. And so the wrecked hopes and fortunes may be counted by the thousands and crime, ignominy and wretchedness are present everywhere. In a less degree the evils of over-living, too, prevail, and men and families mourn for want of that which they have unwisely squandered and wasted in a way that brings no solid comfort to them.

There is no happiness in living beyond one's means. Those who have no debts, who pay as they go and make this their rule, are more careful and economical than those who buy on credit whatever they may desire or think they need. Buying on credit is our national bane, an evil which saps the foundations of our social comfort. It keeps a man in debt, increases his expenses; makes his necessities greater, and tempts him to risk his property in vain efforts to extricate himself from pecuniary difficulties. It is quite easy to spend what we have not; but a man always thinks twice before he breaks upon a small accumulation which he already has, and will rather add to it than trench upon it. Therefore the habit of saving, once created, is a safeguard against careless spending and should be encouraged in every legitimate and proper way. There is an economy that is mean and stingy; but it is very easy to avoid this fault without falling into the opposite vice of extravagance, and to hit the happy mean of a sensible and wholesome economy.

BREVITIES.

THE imports of coffee for the year ending June 30, 1880, were over $60,000,000 in value. One half of this could have been saved at home by growing and using chicory instead.

WHY not grow it at home? The importations of raw silk amounted to over $12,000,000 during the past year. The silk industry with a duty of 60 per cent. is rather over stimulated, is it not? Would it not be a good thing to put a little more energy into the linen industry, not a manufactory of which exists in the country? Our importations of flax goods are about $25,000,000 worth annually.

A GREAT find is reported from the mountains of Nevada of a new hardy silk worm that feeds upon oak leaves. Naturallists describe the worm as bombyx quercleus. It is said, however, to be known in China and that it makes several broods in a year, and does not cut the silk in emerging from the cocoons, but pushes the threads aside. The silk is said to be stronger, and the worm hardy, living in open air and needing no care or shelter.

THE committee to select a site for the World's Fair to be held in 1883, have made choice of a vacant piece of 250 acres of land on and near the upper end of Manhattan Island, known as Inwood. It is about eleven miles from the N. Y. City Hall, in the lower part of the city, but accessible by the Elevated and Central railroads, while two steamer lines can carry visitors to it. Three other railroads are already under way to the vicinity and will no doubt be completed before the time for the opening of the Fair.

THE price of rye in St. Petersburg has fallen very considerably of late, and a similar decline is expected in Germany. In Russia the Government it seems, following the advice of Joseph of old to Pharaoh, is accustomed to purchase, in years of abundance, large stocks of that cereal, so as, in times of war or short crops, not to be deficient in a commodity which is so extensively used by the masses of the people. To lower the high prices of rye bread and thus alleviate the sufferings of the poorer classes, the Government has thrown a large supply on the market, thus depressing prices, much, no doubt, to the disappointment of those who were speculating in public distress. It is anticipated that this reduction in the price of rye will lessen the demand for Indian, for which there was growing a largely increased demand in consequence of the high price of its rival.

THE meeting of the Connecticut Board of Agriculture promises to be one of great interest. It will take place the 15th, 16th and 17th instant at New Britain. Many lectures will be delivered which have been selected with great good judgment. Prof. Atwater's subject is "How to develop the rational side of farm life and practice." "What the farmer should know about diseases of domestic animals," is the subject upon which Prof. Cressy will lecture. "Our Schools of Agriculture"—"Thoughts on agricultural education"—"Systematic agricultural education as adapted to the American farmer"—"The Agricultural Press," will be treated respectively by W. J. Beal, E. L. Sturtevant, S. W. Johnson and J. B. Olcott.

For Women.

CONDUCTED BY MISS RAY CLARK.

LITTLE FEET.

HARK! I hear the little feet
Of the tiny Maykin sweet
Pattering on the floor;
Back and forward, to and fro,
Now they come, and now they go,
Restless ever more!

First a pattering, then a peace,
Faster now, and now they cease,
Waiting at the door;
Now renew their little part,
Practice all their tiny art
Freshly o'er and o'er.

Music springs from every beat,
Comes so softly and so sweet,
Thrills us through and through;
Like a poet's soothing rhymes,
Or the evening's mellow chimes
O'er the waters blue.

Now I hear them on the stair!
Yes, the little feet are there,
Coming sure and slow;
Now they patter, now they stay,
Feeling out their little way
To the room below.

Now they safely reach the floor,
Come they quickly through the door,
Opened for them wide;
Bring they in with roguish grace
A little merry, laughing face,
To darling mamma's side.

There they gladly rest awhile
'Neath the sunshine of her smile,
There we'll let them be;
But the echoes soft and sweet
Of those little pattering feet
Through the coming years shall greet
Our loving memory!

DESCRIPTION OF CUTS.

FIG. 451.—EDGING FOR UNDERLINEN.—(Crochet.)—Along 17 chain crochet to and fro as follows: 1st

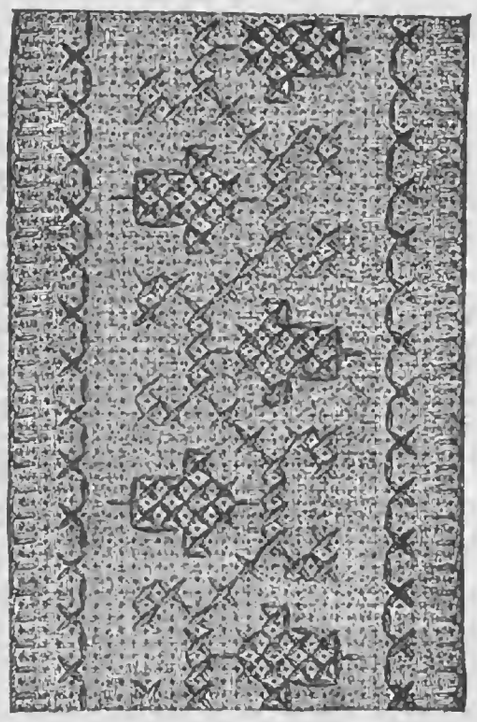

FIG. 453.

row: miss 3, 12 treble, leave 2 next stitches unnoticed. 2nd row: 3 times alternately 7 chains, miss 3, 1 double. 3rd row: 9 chain, 1 double in 4th stitch of chain scallop, twice alternately 7 chain, 1 double in 4th stitch of next chain of scallop. 4th and 5th rows: like the preceding, but at the end of the 5th row 5 more chain, 1 treble in 1st of 9 chain of 4th row, 5 chain, 1 slip-stitch in vertical part of last double of 3rd row, 3 chain, 1 double in first chain of 2d row. 6th row: 8 treble in 5 chain, 1 treble in next treble, 8 treble in next 5 chain, 3 times alternately 3 chain, 1 double in 4th chain of next scallop. 7th row: 3 chain to form one treble, 12 treble, 3 chain, 5 times alternately miss 2, 2 treble with 3 chain between in next treble, 1 chain, join to first foundation stitch, 1 double. 8th row: 4 times alternately 7 chain, 1 double in next 3 chain but one, 7 chain, miss 2 treble, 2 treble in next 2 treble, 6 chain, miss 6, 3 treble in next 3 treble. 9th row: 3 chain to form 1 treble, miss last treble of preceding row, 12 treble; repeat the 2nd to the 9th row, but in every repetition after the last stitch of the 7th row, join 1 double in corresponding chain of 8th row of the preceding pattern. Then crochet along the upper edge as follows: 1st row: double crochet. 2nd row: 3 treble, 3 chain, miss 2. 3rd row: 1 treble in 3 treble, 5 chain; repeat. 4th row: like the 2nd. The centre of the 3 treble must be worked in the treble of the preceding row. 5th row: double crochet.

FIG. 457.—TRIMMING FOR CHEMISE.—In this pattern each rosette is crocheted separately, as follows:—Close 7 stitches into a circle.—1st round: 3 chain to form 1 treble, 19 trebles in the circle. 2d round: 4 chain, the first 3 to form 1 treble, 19 times alternately 1 treble in both parts of treble, 1 chain. 3rd round: 4 chain to form 1 long treble, 2 long treble drawn up together in the chain, then 19 times alternately 5 chain, 3 long treble drawn up together in next chain, then 5 chain. 4th round 3 slip-stitch, 20 times alternately 5 chain, 1 double in 5 chain. This completes a rosette. The other rosettes are crocheted in the same way and joined together, as shown in the illustration. Thirty-two rosettes are sewn together in a circle. The front and back have ten rosettes each, and six are wanted for each shoulder. A length of seven rosettes is joined on for each sleeve (see illustration). Along the upper part of the rosettes, including the sleeves, crochet as follows:—1st round: * 1 treble in 5 chain of 2d chain scallop of rosette, twice alternately 4 chain, 1 double in 5 chain, 4 chain, 1 fourfold treble in 5 chain (only half drawn up), 1 long treble in 5 chain of 1st of the 6 free chain scallops of next rosette, draw up the fourfold long treble, 2 chain, 1 long treble in center of fourfold treble, 4 chain, repeat from *. Close always with a slip-stitch and manage to keep the work at the corners. 2d round: 4 chain, the first 3 to form 1

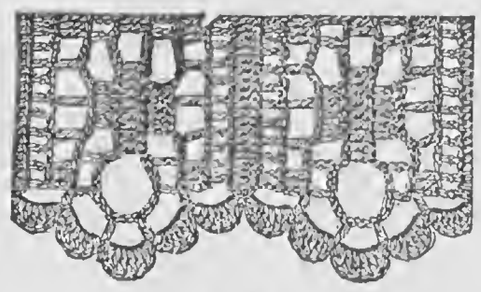

FIG. 454.

treble, then alternately miss 1, 1 treble, 1 chain. 3rd round: 4 chain to form 1 long treble, alternately 4 chain, miss 2, 2 long treble. 4th round: like the 2d round, 5th round: alternately 7 chain, miss 5, 1 double. 6th round: 4 slip-stitch, * 4 chain, 3 treble in 7 chain, 4 chain, 1 double in center of 7 chain, repeat from *. The last double must be worked in the 4th of the 4 slip-stitches. 7th round: * 4 chain, 3 double, with 4 chain between each in next 3 treble, 4 chain, 1 double in next double, repeat from *. Then crochet along the other side of the work, 3 rounds like the first three.

FIG. 455.

FIG. 459. BODICE AND FICHU.—Princess bodice and elbow sleeves of blue grosgrain silk. Down the front of the bodice pleated folds of fine white net are continued below the waist, and laced across with a narrow blue silk ribbon of the same shade as the dress. A pleated frill of lace is sewn round the net, and is finished off at the upper edge with a bow and ends of the ribbon. Turned-down collar, arranged out of fine pleated frills of lace, with narrow ruffle round the neck, tied with blue ribbon in front. On the left side a spray of white flowers and leaves. The sleeves are trimmed to correspond, with puffings of net crossed by narrow ribbon, and lace frill at the elbow under a bow of blue silk.

FIG. 458. CORSET FOR GIRLS OF EIGHT TO TEN YEARS OLD.—Corset of longcloth and white jean, with shoulder-straps of the latter material. But-

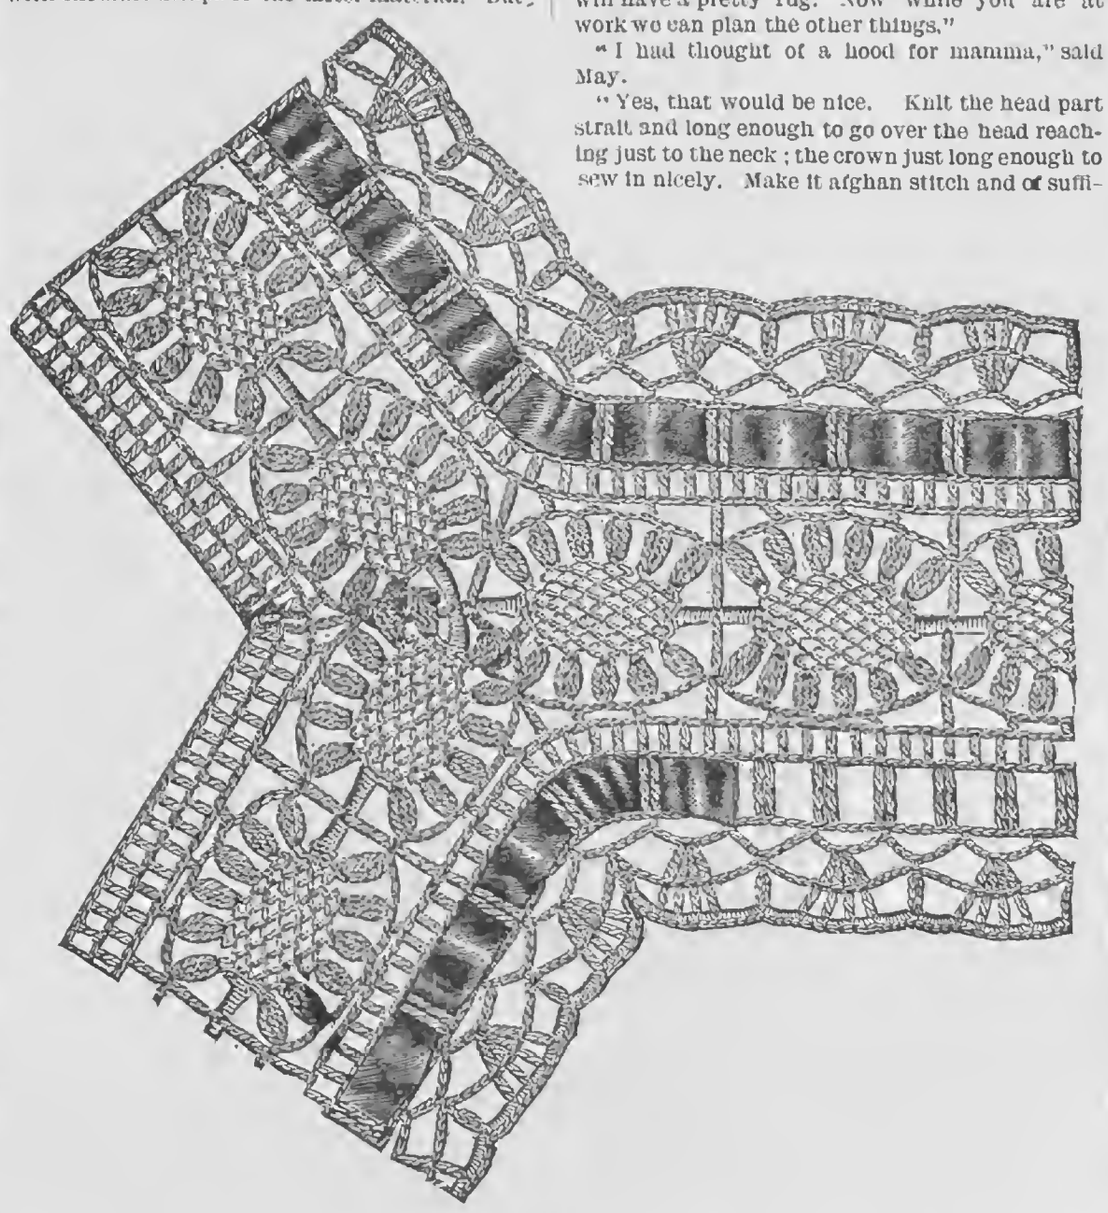

FIG. 457.

tons to support the weight of the petticoats are sewn on at the waist, and the corset is fastened with laces corded through eyelet holes.

FIGS. 453, 455, and 456. APRON FOR GIRL OF TWO TO FOUR YEARS OLD.—Apron of gray lawn, with borders and shoulder-straps of gray Aida cloth. The latter is worked in cross-stitch, with blue cotton, from the pattern given in Fig. 453.

CHRISTMAS PRESENTS.

"Oh, Auntie!" said May White, as she rushed into the house, "I want you to tell me what to make for Christmas presents. There is pa and ma; and grandpa and grandma; and Gracie, Mary and the baby. I want to make the things, for if papa gives me the money to buy them it will not seem as if they were mine."

"To begin with grandma; how would you like

FIG. 456.

to make her a nice rug to lay before her bed? Make it out of bright colors, and it will be very pretty and also serviceable, and will please her. I would braid it."

"Auntie, will you show me how?"

"Certainly; here are some pieces I have been getting for you. We will tear them into carpet rags, take four and join them together at one end. Now weave them together into a braid, turning one strand at one side over every time and the other under. Keep them doubled together even; in a little while you will get accustomed to the work then you will not mind the trouble. When one strip is braided sew another on it; in this way the ends will not be so long as to be troublesome. I will help you a little by making a center for your rug out of bright velvets made into patchwork. I will line the piece and bind it to make it firm. Braid your first strip just long enough to go around this and sew it on, taking care to join the ends neatly. Continue to add strips in this way until the rug is of the right size. Arrange the colors as nicely as possible and you will have a pretty rug. Now while you are at work we can plan the other things."

"I had thought of a hood for mamma," said May.

"Yes, that would be nice. Knit the head part strait and long enough to go over the head reaching just to the neck; the crown just long enough to sew in nicely. Make it afghan stitch and of sufficient thickness to be of use. Make a ruching where the crown is joined to the front by crocheting a long stitch drawing it an inch and a half; do not make a chain: catch it in again in the next stitch, make three together, catch the next stitch on the other side of the seam; make three long stitches, then the next three close to the ones first made. Keep alternating until you get around the crown. Make two of these ruchings in front one caught half way in the other. Make a cape to the hood, and crochet a piece on the top for ornament. Place a bow of ribbon on the top and at the neck; at the back you can put a cord and tassels, or strings of ribbon, for fastening."

"How are those little knots made in your hood, auntie?"

"When I am drawing the wool back in making the afghan stitch, I sometimes knit four chain stitches between two of the stitches, then next time take up the stitches as if the others were not there, leaving them on the right side. This makes the knot, and I arrange them in diamonds, one on each side of the hood and two in the crown."

"You might make your papa a nice long comforter."

"Gracie is crocheting one."

"Well, then, crochet him a pair of mittens."

"But grandma is knitting him a pair."

"You might crochet or knit a pair of wristlets, or embroider his initials on some handkerchiefs."

"I guess I will make the wristlets."

"I would knit them, they keep their shape better; crochet a pretty little edge around them."

"Now, what shall I give Gracie?"

"I will mention several things and you can take your choice. A pretty set of darned linen lace for her neck and sleeves, or a not tie darned with pink or blue saddler's silk; a fancy apron trimmed with linen lace; a handkerchief or glove case, or a jewel case."

"I guess I will make a lace set for her neck and sleeves. What shall Harry have?"

"You might embroider some handkerchiefs with his initials and a dog's or horse's head."

"Yes, but he would lose them in less than a week, or tear them in strings to tie something with."

"Well, then, make a pair of wristlets for him."

"I shall, I guess."

"Make a crocheted sacque for the baby; as it is to be a present, you might make it of pink and white. Make it snug around the neck, then widen rapidly on the shoulders. Make the sleeves a pretty shape and finish the whole with a pretty little edge."

"That navy blue dress you out-grew last Winter would just fit Mattie Burns."

"Why, auntie, do you suppose she would like it?"

"Yes, I know she would. She has never had so nice a dress as that in her life, for her folks are very poor."

"Well, auntie, she shall have it, and her little

FIG. 458.

sisters shall each have something to wear, too, from my wardrobe, for mamma lets me do as I please with my things; would you give them as Christmas presents?"

"Yes, dear, if they are as pretty as the dress, for probably all the Christmas presents they will get, will be from you, and they will appreciate them very much."

"Thank you, dear auntie, for your suggestions and kind help. I presume I shall call on you again for help, before I get all the articles made."

"I will willingly help you all I can."

L. E. K T.

A WORK-BAG BASKET.

MRS. J. E. S.

RATHER queer name it may be, but it just expresses what it is. In it may be put the work, thread, thimble and needles, and then drawn together and carried on the arm as a mere bag, or set on the work-stand, the top folded over, you have a neat and convenient work-basket.

Buy three-quarters of a yard of Silesia, cut two stiff, round pieces four and a half inches in diameter from a paper box, and cover each with a piece of the Silesia. Put these two pieces together so as to have the outside of each nicely covered, and sew them firmly all round the edge, this answers for the bottom. Take a piece of Silesia 24 inches wide and 24 inches long, sew the length sides of the cloth together and fold double so the seam comes inside. Sew over and over, the two edges coming together for the top of the bag, and stitch around half an inch below, making a hem for your ribbon. Work a button hole in each half in which to insert the ribbon, it to be narrow and put in double, just long enough to carry over the arm when used as a bag. Smooth the cloth out and take the opposite end and fold it over evenly to within three inches of the top. This is to be divided into five compartments or pockets for holding the several utensils. Stitch from the bottom up to the top of the pockets and down, securing each compartment. Having got thus far you are now ready to gather with a double thread and short stitches the bottom of these compartments, and sew them to the round you have already prepared for the bottom of the bag-basket. Sew it on so that when finished the pockets will be on the inside, and the button holes worked in the top outside.

Place on the table and turn the top over and down and you have a basket. The trimming may be whatever you choose, pink, blue or red Silesia with two rows of lace, one row sew the top

the other on the top of the pockets is pretty, but narrow strips of some striped cloth look well, is less expensive and more durable. You may also make the bag-basket from linen and embroider it with embroidery crewels.

CONCERNING WINTER COMFORT.

MARY WAGER-FISHER.

PHYSICIANS and other persons who occupy themselves with sanitary matters, always have something to say as the winter season approaches, about the infrequency of bathing among country people during cold weather, and the maladies that are often induced by it. City houses as a rule are warm in winter, while country houses are not; and to take a bath two or three times a week in a cold room, requires considerable courage for healthy persons, while for the frail, the shock is dangerous to wash, dress, comb one's hair and make one's toilet in general in a cold room, the whole winter through is very unpleasant. To sleep in a cold room, is for healthy persons decidedly enjoyable.

How to make the house comfortable in the winter, is a question easily answered, if the house has a hall in it, out of which rooms down-stairs and upstairs open:

PUT A STOVE IN THE HALL.

If the hall is six feet in width, this can always be done. If you cannot decide in what part of the hall to put the stove, nor where to have the stove

FIG. 426.

pipe holes cut, call in your neighbors and hold a council over the matter. Some one will have the wit to see the way clear for the stove, stove pipe and all. The stove should be for coal, so that the fire will keep all night, and never go out. The first expense will be considerable, as oftentimes a line of stove pipe will be needed as long as the moral law, and it must be put up neatly, with hooks and wire to hold it in place; when pipe is run across a room, see that the seam of the pipe is not on the under side. When there is unusual length of pipe, and the wood or coal is wet, so much moisture gathers in the pipe as often to fall in drops between the pieces unless the joining of the pipe is close enough on the under side to form a continuous trough for the water to run in, until it empties into the chimney.

With a good stove well put up in the hall, you may laugh at the cold and be comfortable the whole winter through. The hall is really the heart of the house, and if that is bright and warm the whole house will share warmth and brightness. The upstairs rooms will be warmer than those below, and if you wish your room cool to sleep in, you have but to close the door that opens into the hall and open a window. For warming a house a stove in the hall is worth a furnace in the cellar beside being more healthful—according to my notion—and very much more economical. It will not consume more than one quarter as much fuel. It will pay for itself the first winter in economy of fuel and work; and also in comfort and health and lead you to exclaim a great many times in the nipping cold weather, "Oh that blessed, blessed stove!"

I have a word to say, too, about "banking up" the house, although I take it for granted that everybody banks up his house to keep the cellar from freezing, and to add to the warmth of the ground floor of the house. A floor that is always cold is equal to a chronic malady. Cannot much of the "banking up" of country houses be advantageously made permanent? Unless the house should be built so that the ground steeply descends from it on all sides, the cellar wall can be banked nearly to the top, the windows of course being left open, the earth nicely graded in its descent and then well and firmly sodded. In nine cases out of ten, the appearance of the house will be much improved by the permanent embankment, and be relieved during the winter of the litter and untidiness that often are produced by the usual temporary protection. The cellar windows should never be banked up; for of all the rooms in the house the cellar has most need of ventilation in the winter; particularly if it contains apples and vegetables. The exhalations from decaying vegetation must go somewhere, and if there is no other outlet, they escape through the house. There are always bright sunny days in the winter, when for two or three hours at midday at least, the cellar can be thoroughly ventilated. This ventilation should be carefully attended to. To live over an unwholesome cellar is suicidal; and the most dark, wretched and muddy hole that was ever dignified by the name of cellar can be made a decent and comfortable apartment by giving it a dry bottom and sufficient light and air. When all other means of lighting your cellar fail, cut a hole through the floor above it, and put in a large pane of flint glass. It will cost a dollar and a half perhaps, but will last until doomsday, and will enable you to go into the cellar without a candle, and without fear of breaking your neck in the darkness.

Far, far better for you than Beer, Ale or Porter, and free from the intoxicating effects, is Hop Bitters.

Literary Miscellany.

INMATES OF LESTER HALL.

(Continued from page 821.)

This time the tableau was "Elaine: the Lily Maid of Astolat," and the song Cecil was singing, as she stood half in light and half in shade, was the song of "Love and Death." Miss Heriot was the Lily Maid, and when Cecil stood behind the curtain, Dr. Carewe could see the erect, graceful figure; the beautiful pale face; lustrous eyes, which had grown tragic as she sang:

"'Sweet is true love, tho' given in vain—in vain,
And sweet is death, who puts an end to pain;
I know not which is sweeter, no, not I.

"'Love, art thou sweet? then bitter death must be.
Love, thou art bitter; sweet is death to me;
O, love, if death be sweeter, let me die!

"'Sweet love, that seems not made to fade away,
Sweet death, that seems to make us loveless clay;
I know not which is sweeter, no, not I.

"'I fain would follow love, if that could be;
I needs must follow death, who calls for me;
Call and I follow—I follow—let me die!'"

The last words died away, and Cecil turned with a quick, sudden, groping movement, holding out her hands. Dr. Carewe made a step forward, but Ernest was instantly by her side, and Lawrence drew back with a bitter smile.

"What is it, Cecil?" said her lover, anxiously. "Are you faint?"

"No—no," she said, faintly. "It is nothing. It was the heat, I think. Leave me alone for a moment and I shall be quite myself again."

"You must not fail us, Miss Lester," said Mr. George, who had been watching her rather uneasily. "Remember your tableaux from 'Guinevere' will be the grand event of the evening. Doctor, come and prescribe for Miss Lester. I can't have her fainting yet, you know."

"If Miss Lester will allow me, I will prescribe a glass of champagne," said Dr. Carewe, smiling slightly.

"Thank you, doctor," said Cecil, coldly. "That is a pleasant prescription, but I do not need it."

After a pause of breathless expectation the curtain rose on those two last tableaux from "Guinevere." The first was the fallen queen at the convent at Almesbury, with the little novice, after her flight from the Court. Cecil was Guinevere, clad in flowing white garments—her face white, wild, haggard, desperate; Lottie Tyrrell the little novice, who tries to console her, and yet stabs her to the heart.

Both girls looked their parts to perfection—the guilty, despairing queen; the simple-minded child, looking at her with half-fearing, half-pitying eyes. But it was almost too true to nature; and as Cecil's face met their view, tears came into the eyes of one or two among the audience. And when the curtain fell there was no applause, but a silence which remained unbroken until it rose again on the last scene—King Arthur's visit to the convent, and his parting with the queen.

Lawrence Carewe personated the king. He stood erect, very pale and grave, but with a wonderful tenderness on his face, as he looked at Guinevere as she grovelled with her face against the floor. "There, with her milk-white arms and shadowy hair, she made her face a darkness to the king."

At his feet, her hair falling over her in heavy waves, lay Cecil. Her hands, trembling hands, lay upon the mailed feet of the king. Her face was half hidden, but the expression of agonized entreaty on her features was inimitable. And when the curtain fell there was a unanimous shout of "Encore!"

When it arose again the attitude of both were unchanged, but the face of the king had lost its pitying tenderness, and was stern and set as marble; while Guinevere's face was hidden

"I wish she would sit for me just as she was," said Mr. George, as the curtain fell again.

"What an expression! Where did she get it?"

Where? In the depths of her aching heart, which was longing for a pardon which it could not obtain—from between the pale lips which had whispered, "Ah! forgive—forgive!" in a voice of anguish which reached his ears alone. And the forgiveness had not been granted—the whispered word she had prayed for had not been spoken!

CHAPTER XXV.

DR. CAREWE RECALLS CECIL TO A SENSE OF HER DUTY.

"Doctor, let me congratulate you! Your King Arthur was most admirable, although it was a wonder to me, and to all of us, how you could resist so beautiful a suppliant."

And Mr. Brayburn looked up smilingly at Dr. Carewe's grave face, as they stood together in the drawing-room an hour after, when the children had gone to bed, and the elders were resting after their labors, and waiting for the clock to strike twelve, and usher in the Christmas-day which was so near at hand.

Dr. Carewe bowed gravely, but made no answer.

"She is very beautiful, is she not?" Mrs. Brayburn went on, looking over at Cecil, musingly.

"Very beautiful!" answered the young man, calmly.

"Poor child!" her ladyship said, softly.

And Dr. Carewe turned quickly to her.

"Your pity seems singularly misplaced," he said, rather bitterly. "Miss Lester seems a very fortunate young lady."

"You are right to say 'seems,'" said Mrs. Brayburn; shaking her head. "In this case it is all seeming."

"What makes you think so?" said Lawrence Carewe, dubiously.

"Her face," said Mrs. Brayburn, shortly. "Why, doctor, is it possible that you, who ought to be able to read countenances fairly well by this time, can think Cecil Lester a happy woman?"

He looked over at Cecil as Mrs. Brayburn spoke; and as his eyes fell on the beautiful, weary face—the sweet mouth, with its sorrowful curves—the unutterably-sad expression which never left her eyes, even when her lips smiled—he felt the truth of his hostess's remark.

"What can she need to make her happy?" he said.

"Something. I don't know what, but she wants something she has not got."

"She will find happiness in her husband's love," said Lawrence Carewe, in a constrained voice.

"Never," said her ladyship, abruptly. "That is if she marries Ernest. Doctor," she went on, impatiently, "where are your eyes? Do you think she loves her fiance?"

"Why should she not?" said Dr. Carewe, calmly.

"Why should she not? There is no reason, certainly," said the little French lady, but she does not love him. And when a woman like Cecil Lester marries a man she does not love, she soon hates him."—To be continued.

THE EYE-OPENER.

HAAS'S HOG CHOLERA REMEDY.—This nostrum is extensively advertised and sold throughout the country; but especially in the West, in spite of the fact that according to the opinion of the Commissioners appointed by the Government to investigate the disease, there is no known remedy for it. In his advertisements Mr. Haas gives testimonials in favor of his "cure" from several prominent swine breeders and raisers in the West and it is upon the strength of these that his remedy has gained most of its sale. The National Live Stock Journal for some time has been emphatic in its opinion that this Haas's "Hog Cholera Cure" is a HUMBUG, and that it would neither cure nor prevent the disease, and in its issue for last October it proposed to Mr. Haas that, if it was a genuine "cure," he should obtain certificates from several well-known hog breeders to the effect that it would either cure or prevent the disease, promising on their production that it would accept them as conclusive evidence that it had been mistaken in its expressed opinion of the character of the "cure" and thenceforth speak well of its efficacy.

In its issue for December the Journal returns to the subject, giving three certificates received from Haas, purporting to be indorsements received from well-known swine raisers. Of these the Journal has this to say: "Six days after the date of their testimonial to Haas, Shepherd Alexander of Charleston, Ill., wrote to the editor that they had no faith in any man or medicine that claimed to cure hog cholera, and that they would ask Haas to discontinue the use of their name in connection with the medicine. In a former letter they had said, "our first experience with Dr. Haas's medicine was favorable, but we are sorry to say it does not hold good." The second indorser, A. C. Moore, of Canton, Ill., speaks from hearsay only, giving no opinion of his own belief of the efficacy of the "cure" either as a preventive or remedy. The third certificate was from H. C. Castle of Wilmington, Ill., and on the day it was received, the editor of the Journal met him at the Fat Stock Show, when he denied having ever intended to give Haas any certificate as to the merits of the medicine as a cure or preventive of hog cholera, and then he dictated the following words. "I have not seen Mr. Haas's medicine tried in a case of hog cholera, and I do not know whether it will prevent or cure this disease." This was three weeks after the date of the certificate to Haas.

The journal gives extracts from letters received on the subject from several other prominent swine men who have no faith in the "cure." L. N. Bonham, editor of the Poland-China Record, says of Haas—"he is one of those vampires which, when attacked, are hard to shake off. I have notified him to discontinue the use of my name, as he makes me say what I never said." Some of his pigs had a cough. Haas insisted on trying his medicine on them. It was done, and soon the pigs recovered, and the owner gave Haas a testimonial to that effect, though he didn't know that their recovery was due to the medicine. This paper Haas used as a certificate in favor of his remedy as a cholera cure, though the pigs never had the cholera, and Mr. Bonham had distinctly told him he had no faith whatever in the medicine as a preventive or cure of that disease. H. M. & W. P. Sisson of Galesburg, Ill., say that "after a *thorough* trial, Haas's medicine will neither cure nor prevent the so-called hog cholera." Other letters are to the same effect. It is the easiest thing in the world to get certificates from some peoples' easy good nature, which can be so cunningly twisted as to bear a meaning very different from that intended by the writers. In attacks of hog cholera, there is always a time when the disease having run its course, begins to subside, and a remedy used just then gets the credit of effecting the favorable change. But that has really been Nature's work. This Haas's Cholera Cure, may stimulate the appetite, but according to experience, it neither prevents nor cures "hog cholera."

The "Monarch Lightning Saw Company," of 163 Randolph street, Chicago, was shown up in this paper nearly six months ago, when its advertisement was thrown out of our columns, our agent not being satisfied of the reliability of the concern after having investigated it on the spot. Several of our contemporaries have just discovered that, like the heathen Chinee, "for ways that are dark and for tricks that are vain, it is peculiar," and so are warning their readers against dealings with it—we repeat our old warning for the benefit of new readers.

NEW PUBLICATIONS.

How I Found It North and South.—Boston, Lee & Shepard. Paper, 50 cents; English Cloth, $1.

Born and reared on a New England farm, the author, like many another New England boy of his younger days, went to sea, before settling down in life. At the age of twenty-one, however, he married, and took charge of the "old farm,"—the paternal homestead. Loss by fire, and a desire to get along faster in the world, led him after some years to the city, where he soon learned that "all is not gold that glitters." To relieve himself from the anxieties and perplexities of the city, he at length turned back, with ardent longings to seek the former peace and quiet and true-heartedness of the country.

But the old home being then in other hands, he must look for a farm elsewhere; and it is here that his story begins,—"How I Found It."

Appended is "Mary's Statement," in which the ever-loving and devoted wife gives some pleasing reminiscences of those earlier years at the old homestead, with an account of David's management of the farm, the profits derived, and also a vivid description of the event that shrouded their home in gloom, and was the final cause of their leaving it for the city. The whole forms a story which no lover of the country and of rural life can fail to find pleasure in reading.

Spiritual Songs. With Music for the Church and the Choir. Selected and arranged by REV. CHAS. S. ROBINSON, D. D. Scribner & Co., New York.

This work, comprising 1,086 Hymns, 509 Tunes, Chants, etc., beautifully printed on superfine, linen, tinted paper, and strongly bound.

Bringing to the work all the advantages of a rich and ripe experience, with helpful suggestions from a vast correspondence with ministers and musicians, and rare facilities for the production of a work that should in its completeness surpass all others. Dr. Robinson has, it is believed, succeeded in giving to the churches a rich, most useful, convenient, compact and in every way acceptable Manual of Song ever brought before the public.

Baby Ballads; Mrs. Follen's Little Songs: New Songs for Little People. Boston, Lee & Shepard.

Besides the songs, these three little books are filled with illustrations which will serve to increase the interest excited in the juvenile community by the reading or hearing of the rhymes. Many a child may be made happy by the possession of one of these on Christmas day.

MAGAZINES FOR DECEMBER.

HARPER'S MAGAZINE is a striking Number, presenting many novel features. The first instalment of a new novel, "Anne," by an American author—Miss Constance Fenimore Woolson—is very promising. The story is sharply American.

The city of Pittsburgh is the subject of a very interesting paper by G. F. Muller.

The Number opens with twelve Christmas Carillons by Annie Chambers Ketchum, with four excellent illustrations by Fredericks.

Moncure D. Conway contributes the first of a series of papers, entitled "The English Lakes and their Genii."

Wolf's engraving of Abbey's full-page illustration of Herrick's poem, "To be Merry," is one of the finest pictures that have ever appeared in the Magazine.

Rose Terry Cooke contributes another of her characteristic New England stories.

"The Sixth Year of Quong See," is an interesting description by Catherine Baldwin of a New-Year's celebration in Chinatown, San Francisco.

Miss Sarah O. Jewett contributes a poem; "Two Mornings." Other poems are also contributed. A short story, "Miss Cabot's Guest," is contributed by Horace E. Scudder.

Charles F. Thwing shows in an able article the results of "Recent Movements in Woman's Education;" an article by W. T. Davis, "The Queen, Ministry, Lords, and Parliament," gives a satisfactory explanation of the operation of the British Government; and Mr. Edward Howland contributes a suggestive article, entitled "A Great City."

Henry James, Jr's., novel, "Washington Square," is concluded in this Number.

The Editor's Easy Chair treats of the Newspaper and Orator, the influence of Byron, the Rugby Colony in Tennessee, and the Irish Agitation; and contains a communication from Wendell Phillips correcting a very common error in the use of De as a prefix to French family names. The other Editorial Departments are well sustained.

THE HERALD OF HEALTH.—Contents: Common Mind Troubles; Health for Girls; Two or Three Health Maxims; The Most Abused—The Moth; The Close of the Year—Management and Care of the Singing Voice; Rugby—A Christmas and New

Year's Present; Clearness of Judgment—Turkish Baths in Diseases of the Eye; A Sermon; Woman's Work; Alcohol in Cold Weather; The Herald of Health in New Zealand—Heresy; Leaving off Drinking; Theory vs. Practice; A Caramel Custard; To Cook Onions; Chewing Milk; A Word for Water; Apples; A Waterproof Sole for Shoes; Nourishment in Wheat Bran; Keeping Fruit; Heels or no Heels—Current Literature.

TURKISH BATHS IN DISEASES OF THE EYE.—Dr. Cornelius R. Agnew, Professor of Diseases of the Eye and Ear in the College of Physicians and Surgeons, New York, says:

"We have learned in all the inflammatory affections of the eye, as far back as the iris and including it, to place great reliance upon the treatment of the general cutaneous surface as a most valuable if not indispensable adjuvant, and we know nothing more valuable among all the methods of practice than the Turkish bath. We rarely treat a case of conjunctival, corneal, or iritic disease now without the Turkish bath. We have seen very many cases where all other means failed to turn the scale in the direction of cure or mitigation until the Turkish Bath, was tried, and where a Turkish bath did it most effectually. We have seen cases of progressive iritis in which a mydriatic would not alone dilate the swollen irresponsive iris; where the effect of a single Turkish bath was to unlock as, it were, the immovable pupil, and to do it within an hour or two, and so to prevent destructive adhesions. We have seen many cases of obstinate inflammation of the cornea where the most beneficent results were produced by it in connection with other remedies. Pilocarpine given hypodermically is a most valuable agent for a similar purpose, if administered in sufficient doses to produce profuse salivation and sweating, but only to be employed when circumstances make the use of the Turkish bath impracticable.

"In granular lids, too, the Turkish bath is a most valuable remedy. Unfortunately it is too costly for many of our patients, and it is a misfortune that the hospitals have not yet provided them. We are happy to say that in the new plans which we are now preparing for the new Manhattan hospital building, a large portion of the basement of the structure is to be fitted with the Turkish bath."—Herald of Health.

APPLETONS' JOURNAL for December contains a novelette from the German, entitled "A Tree in Odenwald," that is eminently readable. There is a brilliant anecdotical paper on Alexandre Dumas the elder, which of itself is worth the price of the number. Then we have a long review of the concluding volumes of McCarthy's "History of Our Own Times;" and a review of "Sectional Fiction," meaning "A Fool's Errand," and other recent novels of its class, that is notably searching and pungent. There is a graphic sketch of "Paris before the Revolution," and a most interesting article called "The Roof of the World," describing the adventures of Lieutenant Wood in crossing the Hindoo Koosh, and exploring the hitherto unknown region of the upper Oxus. A. J. Faust writes entertainingly and anecdotically of "Memory;" Mr. Grant Allen discusses "The Dog's Universe," in an article that is both scientific and popular; Mr. Connolly reveals to many readers an Irish poet, Clarence Mangan; and we have some anecdotes of English rural life. The editor effectually defends the public schools against the assaults of Mr. Richard Grant White, showing that the evils Mr. White deplores are common to all classes and the age generally.

LIPPINCOTT'S MAGAZINE opens with an interesting and finely illustrated paper entitled "An Historical Rocky Mountain Out-post," by George Rex Buckman. Another illustrated article, "Our Grandfathers' Temples," by Charles F. Richardson, is a very readable account of the oldest places of worship still existing in the country. "Will Democracy Tolerate a Permanent Class of National Office-holders?" is a challenge to the Civil Service Reformers. "The Authors of Frou Frou," by J. Brander Matthews, has a timely interest in connection with Sara Bernhardt's performances. Other papers deserving of notice are "Gas-Burning and its Consequences," by George J. Varney; "An Episode of Spanish Chivalry," by Prof. T. F. Crane; the conclusion of Dr. H. C. Wood's exposition of "Automatism;" and a contribution to Shakesperian studies by Prof. James D. Butler. The popular serial, "Adam and Eve," reaches a dramatic and satisfactory termination in this number, which also contains several striking stories, including a thoroughly realistic sketch of Edinburgh street life, by the author of "Flitters, Tatters, and the Counsellor." The "Monthly Gossip" is unusually full and entertaining.

THE ATLANTIC MONTHLY contains its usual amount of entertaining and instructive matter. This magazine throughout its yearly publications does not offer the pictorial attractions of some of the other leading popular monthlies, but it contains articles of excellent merit of literary, social, industrial and other character. Families selecting several magazines for subscription should include this one. Families in suburban villages would be benefited if they would club together, each one selecting a different magazine or paper and exchanging with one another, thereby giving all the benefit of an extended reading which could not be obtained from a single periodical.

THE NURSERY—A MONTHLY MAGAZINE FOR YOUNGEST READERS.—This is a unique and much-admired work, and should be a welcome visitor in every intelligent family where there is a child to be entertained. It contains many choice pictures, and its articles in prose and verse, are adapted with the greatest care to the capacities of children.

Feeble Ladies, Aged Persons, Weakly Children, Persons of Sedentary Habits, all need Hop Bitters daily.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

ONE WEEK FROM MRS. CLAY'S JOURNAL.

ANNIE L. JACK.

TUESDAY. Nora constitutes herself cook on washing days, leaving Janet all her time for getting the clothes out early. For dinner we utilize the oven, having baked meat and baked potatoes, with Yorkshire pudding, and some light, easily-made pudding or custard cooked in the oven. My sister is a good little cook, and prides herself on the accomplishment, and sometimes her little experiments are really artistic, "Why not have things got up prettily," she often says, when we think she takes too much time over her baking board, so we know we may expect something extra whenever Nora is cook, and if Janet had to leave me to-morrow I should not be afraid but that I could get along now with my two little girls and my neat, domestic sister. It is a great pity when young ladies feel themselves above learning all the details of housekeeping; the knowledge of these makes one so independent, and, as a dear, old lady I once knew used to romark, "It is easy to carry about with you." We canned our pumpkins last Fall when they began to show signs of decay, and filled the emptied fruit cans, cooking and straining as if for immediate use. To-day the pies of these were pronounced delicious by our household, and we have determined to try the experiment on a larger scale next season, putting up squash to be used as a vegetable, at a season when it cannot be otherwise prepared. It is a good plan to refill cans, instead of gathering up an array of empty, becobwebbed bottles and cans in the cupboard or cellar. I am always glad to see the washing done; it seems as if half the week's work is over, and with the modern appliances now-a-days, women and their help should be able to spare more time to cultivate the intellect, and improve each other.

DOMESTIC RECIPES.

Caramel for Coloring Soups, Etc.

Put into a tin or porcelain saucepan half a pound of white sugar and a tablespoonful of water. Stir over a slow fire until of a clear, dark-brown color. Great care must be taken not to let it burn. Add a teacupful of water and a teaspoonful of salt. Boil three or four minutes, cool, strain and put away in close-corked bottles. This innocent coloring substance greatly improves the appearance of soups or gravies, giving to them a rich amber color.

Noodles for Soup.

Two eggs, slightly beaten, a tablespoonful of water, half a teaspoonful of salt and flour to make a stiff dough. Work it well 10 minutes adding flour as necessary. When pliable, cut off a small part, roll very thin, dust over flour, begin at one side and roll into a tight roll. With a sharp knife, cut into thin slices. Make two horns before using them, that they may dry. Add to the soup 20 minutes before serving.

Soda Crackers.

Five small cups of flour, two small cups of corn-starch, two teaspoonfuls of salt, five teaspoonfuls of cream-of-tartar. Pass through the sieve three times. Chop two tablespoonfuls of firm lard in the flour. Dissolve two scant teaspoonfuls of soda in two tablespoonfuls of warm water, add about a pint of milk to it, stir into the flour and mix to a smooth dough. Roll out thin, cut into squares rub the surface with sweet milk and bake in a very moderate oven. Do not brown.

MRS. J. McC.

Christmas Game Pie.

This pie can be made of any game, but is especially nice when made of prairie chickens and quails. Dress and wash the birds, cutting each quail in half and the chickens into four pieces. Cut off bits of inferior portions neck, etc., and boil with the giblets until tender. Make a good paste and line a large pudding dish. Put a thin layer of cold boiled mutton, beef, corned ham, or anything you may have, in the bottom of the dish, upon this pieces of the birds, peppered and buttered. Make a dressing of bread-crumbs, the chopped giblets, minced parsley, thyme, and a small onion, seasoned with pepper and salt and the juice of a lemon. Strew part of this over the birds, then more birds and crumbs until all are in. Strain the liquid the giblets were boiled in and pour over, cover with a good thick crust and bake three hours, if a large pie. Cover with paper to prevent becoming too brown. H.H.

Mending the Coal-Scuttle.

One of our scuttles gave way on the side and at the bottom, and not having the money to buy a new one, I set to work to mend it, so as to prevent the sifting of fine coal over my kitchen floor. I made a stiff flour paste, cut some pieces of canton-flannel larger than the holes, and pasted them on, nap side down. I pasted two pieces over each hole, and after they had become perfectly dry blackened them on the outside with stove polish. The scuttle has been in use six months and is as good now as when first mended. MARY B.

Inexpensive Napkin Rings.

Cut a piece of canvas the size of a napkin ring, only larger, so that when stitched together, one end may overlap the other and be cut in points or scollops. Work the canvas with beads, worsted or silk, as fancy may dictate, leaving space for first name or initials. Line the canvas with silk—covered cardboard and bind the edges with bright ribbon to harmonize with the embroidery. A pretty Christmas gift. MARY B.

QUESTIONS ANSWERED.

Ebonizing Wood.

PLEASE give directions for staining wood in imitation of ebony. A. R. H.

ANS.—Wash any close-grained wood with a strong boiling decoction of log-wood two or three times, allowing the wood to dry between the applications. Then wash with a solution of acetrate of iron (made by dissolving iron filings in strong vinegar).

The Literary Revolution.

Victories are won every day. In January, 1879, "The Literary Revolution" was inaugurated by the publication of one small volume. At present, its list, published and in preparation, comprises nearly 175 volumes of standard books. It gives employment to about 500 hands, and now has facilities for delivering to purchasers over five tons of books a day. To meet the popular demand for the coming twelve months at least **2,000,000** and probably **3,000,000** volumes will be required. The almost wonderful success which the "Revolution" has achieved is, doubtless, to be attributed to its leading principles, which are:

I. Publish only books of real merit.
II. What is worth reading is worth preserving—all books are neatly and strongly bound.
III. Work on the basis of the present cost of making books, which is very much less than it was a few years ago.
IV. Books have commonly been considered luxuries; in a free republic they ought to be considered necessities, and the masses will buy good books by the million if prices are placed within their reach.
V. To make $1 and a friend is better than to make $5 only, and 1000 books sold at a profit of $1 each give a profit of only $1000, while 1,000,000 books sold at a profit of 1 cent each give a profit of $10,000; and it is more pleasure as well as more profit to sell the million.

LIBRARY OF UNIVERSAL KNOWLEDGE.

Large Type Edition. A verbatim reprint of the last (1880) London edition of Chambers's Encyclopædia, with copious additions (about 15,000 topics) by American editors; the whole combined under one alphabetical arrangement, with such illustrations as are necessary to elucidate the text. Printed from new electrotype plates, brevier type, on superior paper, and bound in fifteen elegant octavo volumes of about 900 pages each. It will contain, complete, about 10 per cent more than Appleton's, and 20 per cent more than Johnson's Cyclopædias, and, though in all respects important to the general reader it is far superior to either of them, its cost is but a fraction of their price. Volumes I. to VI. are now ready, and other volumes will follow, at least two each month, the entire work being completed by April, 1881, and probably sooner. Price, per volume, in cloth, **$1.00**; in half Russia gilt top, **$1.50**; postage per volume, 21 cents.

AN AMAZING OFFER.

It has been our custom in previous publications to offer special inducements to those whose orders are soonest received. In pursuance of that policy, on or before December 31 only, we will receive orders, with cash, for the set of 15 volumes complete, for the nominal price of **$11.00** for the edition in cloth, and **$16.50** for the edition in half Russia, gilt top. The price during January will be advanced to **$11.50** and **$17.25**, and a further advance will be made each month till the work is completed. Volumes will be shipped as may be directed, as soon as they are issued, or when the set is complete.

Chambers's Encyclopædia.

As a portion of the Library of Universal Knowledge, we issue Chambers's Encyclopædia separately, without the American additions, complete in 15 volumes 16mo. In this style it is printed from new electrotype plates made from very clear nonpareil type. Price, Acme edition, cloth, **$7.50**; Aldus edition (finer, heavier paper, wide margins), half Russia, gilt top, **$15**. In this style it is now complete and being delivered to purchasers.

What is the Verdict?

Anybody can afford to own a cyclopædia now.—*Press*, Ellenville, N. Y.

We can only repeat our hearty commendation of a scheme which places in the hands of the people the best literature at a merely nominal price.—*Traveler*, Boston.

The day of cheap and good books is once more with us, and the American Book Exchange merits the praise for it.—*Episcopal Register*, Philadelphia, Penn.

Has some rich relative left you a colossal fortune which you are spending in publishing books for the people at nominal prices? If so, I admire your taste. But won't the old-line publishers be glad when it is gone!—B. F. COGGSDON, Randolph, N. Y.

At these rates any man may, and every man should, have a library.—*The Standard*, Chicago, Ill.

[illegible] wonders in book making. A few dollars will purchase a good library. We pronounce them the best bo[illegible] the money that ever came to our notice.—*The Watchman*, Boston.

[illegible] matter of wonder how such books, in firm binding with good paper and good type, can be offered at such a pr[illegible]—*The Standard*, Chicago, Ill.

It is a mystery which we will not attempt to explain how the American Book Exchange can afford to publish such a remarkably-cheap series of books. Other publishers may be inclined to sneer at them, but so long as the Exchange publishes a book at one-tenth the cost at which it is offered elsewhere, sneers cannot hurt them.—*Courier-Journal*, Louisville, Ky.

We have heretofore given generous notices of this work, because we believe we are doing a favor to our readers in so doing.—*Herald*, Utica, Ohio.

It entirely obliterates the excuse offered by many who really want a good encyclopædia, but are unable to get one of the expensive editions. Quite a number of our readers are subscribers for it, and express themselves highly pleased.—*Times*, Cochranton, Penn.

We know of no publication of recent date that deserves so large a share of public encouragement as this one.—*Sunday Chronicle*, Washington, D. C.

The American Book Exchange is doing a very remarkable work in the reproduction of standard books at absurdly low prices.—*Journal*, Boston.

The character of this marvelously low work is too well known to need much elaboration of its merits.—*Telegraph*, Pittsburgh.

They are well printed and bound. Their form is vastly more convenient than the usual unwieldy quarto or octavo, and their price is cheap beyond all precedent in book-making.—*Sunday Capital*, Columbus, Ohio.

It has been prepared with the greatest diligence and skill, and the literary graces which have been lavished upon it makes its longer articles pleasant as well as thoroughly instructive and trustworthy studies. Nothing seems to have been omitted, and especially in the scientific, biographical, and historical articles, everything is brought up to the very latest date. Chambers's, in fact, is the cheapest, the most complete, and in all senses the best encyclopædia.—*Saturday Night*, Cincinnati, 1880.

It has given me great pleasure to recommend your noble enterprise throughout Virginia. Your names will have to stand with those of Howard, Colden, Nightingale, Morse, Fulton, and Edison, as reformers of the nineteenth century.—R. S. BARRETT, Richmond, Va.

The books are received. I am well pleased with them. Your company is worth more to the common people than the Peabody Fund. It makes me feel good to look at your catalogue. You deserve the praises of all classes of the people.—Z. B. WARSAW, Yadkin College, North Carolina.

Thousands of blessings on the man who invented printing; thousands more for him who uses that invention for the benefit of his fellow-countrymen. The books which I have received from you are wonderful volumes for the money.—D. B. CONKLING, Pastor Congregational Church, Whitewater, Wis.

Standard Books.

History. Macaulay's "England" reduced from $7.50 to $1.25, Gibbon's "Rome" from $9.00 to $2.00; Grote's "Greece" from $18.00 to $2.00; Rollin's "Ancient History," $1.75; Mommsen's "Rome," Green's "England," Guizot's "France," Menzel's "Germany," Carlyle's "French Revolution," Schiller's "Thirty Years' War," Creasy's "Battles of the World," preparing, equally low in price.

Fiction. One book by each of the great authors who have won classic fame—life is too short to read all their works, but you can read *one* of each. Extra cloth bound, large type, 30 to 50 cents each. Scott's "Ivanhoe," Dickens's "Copperfield," Eliot's "Romola," Bulwer's "Pompeii," Kingsley's "Hypatia," Ebers's "Uarda," Hughes's "Rugby," Irving's "Knickerbocker," Cervantes's "Don Quixote," Hugo's "Les Miserables," Thackeray's "Newcomes," Cooper's "Mohicans," Le Sage's "Gil Blas," Goethe's "Wilhelm Meister," Richter's "Titan," De Staël's "Corinne," Macdonald's "Alec Forbes," Mulock's "John Halifax," Bronte's "Jane Eyre," Turgenieff's "Father and Son," Reade's "Love Me Little."

Biography. Twenty-eight standard books reduced in cost from $43.50 to $7.50; among other works being those of Carlyle, Macaulay, Gibbon, Lamartine, Michelet, Stanley, Plutarch, Liddell, Arnold, etc.

Poetry. Shakespeare, large type, 3 vols., $1.50; Milton, 40 cents; Dante, 30 cents; Virgil, 30 cents; Homer's "Iliad," 30 cents; Homer's "Odyssey," 30 cents, "Light of Asia," fine edition, 25 cents; Browne's, 60 cents.

Literature. Chambers's "Cyclopedia of English Literature," reduced from $6.00 to $2.00; Taine from $10.00 to 60 cents; Macaulay's "Essays" from $7.50 to $1.80; "Modern Classics," five vols., from $5.00 to 40 cents; Froissart's "Chronicles" from $8.00 to $1.50; "The Koran" from $2.75 to 30 cents, "American Patriotism," 50 cents.

Juvenile. *Finely Illustrated*, at 40 cents each. "Arabian Nights," "Robinson Crusoe," Bunyan's "Pilgrim's Progress," "Æsop's Fables," "Munchausen and Gulliver's Travels," "Cecil's Natural History," reduced from $3.75 to $1.00. Stories and Ballads, 50 cents, "Karl in Queer Land," 50 cents.

Religious. Young's Great "Bible Concordance" (Spurgeon says Cruden's is child's play compared with it), reduced from $15.00 to $2.00; Geikie's "Life of Christ," from $8.00 to 50 cents; Kitto's "Cyclopedia," from $10.00 to $2.00; Smith's "Bible Dictionary," from $3.00 to 50 cents; "Josephus's Works," $1.50.

Miscellaneous. "Pictorial Handy Lexicon," 250 illustrations, 17 cents. "Health by Exercise," 40 cents. "Health for Women," 30 cents. "Cure of Paralysis," 30 cents. "Sayings by author of Sparrowgrass Papers," 30 cents. "Leaves from Diary of an Old Lawyer," $1.00.

Beautiful Homes. Scott's "The Art of Beautifying Suburban Home Grounds," reduced from **$8.00** to **$3.00**, one of the finest books ever published in this country. Beecher says: "There is no other book that can compare with it for the wants of common people." Geo. Wm. Curtis says: "Is so full of good sense and fine feeling that it should be in every village library."

Revolution Pamphlets.

Only books of the highest class are published by us, and the prices are low beyond comparison with the cheapest books ever before issued. To illustrate and demonstrate these truths, we send the following books, all complete and unabridged, post-paid, at the prices named:

Macaulay's "Life of Frederick the Great." Former price, $1.25. Brevier type, price 3 cents.
Carlyle's "Life of Robert Burns." Former price, $1.25. Large brevier type, price 3 cents.
"Light of Asia." By Edwin Arnold. Former price, $1.50. Beautiful print, brevier type, price 5 cents.
Thos Hughes's "Manliness of Christ." Former price, $1.00. Beautiful brevier type, price 3 cents.
"Mary Queen of Scots' Life," by Lamartine. Former price, $1.25. Brevier type, price 3 cents.
"Vicar of Wakefield." By Oliver Goldsmith. Brevier type, beautiful print, price 5 cents.
Bunyan's "Pilgrim's Progress." Bourgeois type, leaded; beautiful print, price 6 cents.

Descriptive catalogue sent free on request. Remit by bank draft, money order, registered letter, or by express. Fractions of one dollar may be sent in postage stamps. Address

AMERICAN BOOK EXCHANGE,

JOHN B. ALDEN, MANAGER. Tribune Building, New York.

AGENCIES: Boston, H. L. Hastings; Philadelphia, Leary & Co.; Cincinnati, Robert Clarke & Co.; Indianapolis, Bowen, Stewart & Co.; Cleveland, Ingham, Clark & Co.; Toledo, Brown, Eager & Co.; Chicago, Alden & Chadwick, 224 State street; in smaller towns the leading bookseller, only one in a place.

News of the Week.

HOME NEWS.

MONDAY, Dec. 13, 1880.

THE failure of the great coffee house of B. G. Arnold & Co., New York, was brought about by last week's speculation in coffee. They risked their fortune on a rising market, and the market went the other way. There is a lesson in such reverses that is as old as the hills, but if men were as old as the hills they would not profit by it.....The first successful porcelain factory in the United States has been established in New Orleans under the management of enterprising Frenchmen. The kaolin from which the ware is manufactured is found in Louisiana and Texas. Large beds of this white clay are found in South Carolina and Lawrence County, Indiana.....The Legislature of Texas has given, by an inadvertent construction of the State Constitution, the right to women to vote in that State. The Constitution provides that every male person, 21 years of age, not subject to certain designated disqualifications, shall have the right to vote, and the Legislature has enacted, among other rules which shall govern in the construction of all civil statutory enactments, that "masculine gender shall include the feminine and neuter."..... ....A New York butcher, who incautiously ate raw pork, died at Bellevue Hospital in great agony, the attending physicians being unable to arrest the work of the ravenous parasites which were devouring him inch-meal. After death his body when laid open with the knife was found to be swarming with trichinæ.... ....The aggregate of the estimates for the initial work in the improvement of the Mississippi River is $5,133,000.....It is stated that subscriptions to the De Lesseps canal stock are coming in rapidly at New York, but for the most part in small amounts.....An East-bound express train on Ohio and Mississippi Railroad was thrown off the track at Greendale, Ill., by a misplaced switch, and Henry Meade of Chillicothe, and Scott Hill, of Floria, Ill., were killed. No other persons were hurt.

Adjutant General Drum has received a dispatch from General Terry at St. Paul, Minn., stating that he had received information from the camp on Poplar Creek and from Fort Buford which indicated that Sitting Bull would very probably soon come in and surrender at Buford.....In New Salem, near Rondout, N. Y., John Van Tassel assaulted his wife with an axe and then cut his own throat, dying instantly. He was 70 years of age and his wife 38. Van Tassel was jealous of the attention paid to his wife by other men.....

Mail Agent W. K. Syms was burned to death and Mail Agent A. G. Beller had his shoulder broken and Conductor Wessfall had an ankle sprained by the passenger train on the Chicago, Rock Island and Pacific Road, which left Atchison, Kansas, at 5.45, being thrown from the track near Edgetown Junction by a broken rail, twenty-three miles from Atchison. No passengers were hurt.....A fire originating in Iler's wholesale liquor house at Omaha spread to Collins' saddlery establishment, destroying both buildings and contents. The losses are: Iler & Co., stock and fixtures, $125,000; Collins Brothers, harness stock $50,000; Max, Meyer & Brothers, pianos, organs and jewelry, $15,000; Ramage, tailor, $2,500: McMahon, drugs, $4,000; Rodgers & Sons, $2,500, John D. Creighton and Marsh Kennard, $15,000 each; William Paxton, $5,000; McPhane Brothers, $4,000. Other buildings were damaged by water. The losses on buildings are $50,000, and on merchandise about $20,000, and are pretty fully covered by insurance.....Senator McDonald introduced a bill to authorize local taxation of legal tender Treasury notes as personal property, which was referred to the Finance Committee.

The wheelbarrow and cigar-box factory of Stevens & Co., of Cold Water, Mich., was destroyed by fire. Loss, $17,000. Merrill & Co., who occupied a part of the building as a machine shop, loss $5,000 ....William Barres, while drunk at Farmland, Ind., shot and killed his wife, and upon his arrest asserted that the shooting was accidental.....A fire at Highland, a zinc and lead mining town in Southern Wisconsin, caused a loss of $10,000 worth of property, including four stores and three dwelling houses.....A fire at Minneapolis, Minn., burned out the Jacoby block, involving a loss of about $25,000, sustained by the firm of G. M. Wolf & Co., Harris & Levy and Jacoby, photographer .....Mrs. Littlefield, who poisoned her husband and child at Stoughton, Mass., killed herself with a revolver purchased at the time when she procured the morphine for her family.

Mr. Ward, of Pennsylvania, presented to the House a bill providing for a monument to General Lafayette on the Brandywine battle field, ...Mr. Springer presented to the House a bill to change the time for electing Presidential electors and Congressmen to the second Tuesday in October.....A bill which Mr. Springer, of Illinois, presented to the House provides for a temporary increase of the Justices of the United States Supreme Court after March 4, 1881, making the number eleven, but proposes to eventually reduce the number to nine, as vacancies occur..... The bullion shipments from Leadville smelters for November aggregated in value $1,322,000 a decrease from those of the preceding two months; but there is a large increase of ore reserve at the smelters, accumulated during the month..... Dakota asks for admission to the Union as a State. .....It is asserted that the Congressional holiday recess will be unusually short.

The jury in the case of Mrs. Meeker, on trial at Montpelier, Vt., for the murder of her step-daughter, little Alice Meeker, last summer, brought in a verdict of guilty in the first degree. The case will go to the supreme court on exceptions. Almon Meeker, the son, who pleaded guilty of participation in the crime, was sentenced to be hanged.....

THE electors of the several States met on the 2d to cast their votes for the new president and vice-president, and appoint one of their number to carry the vote to Washington. It is said that Georgia will lose her vote from a conflict of State and National enactments .....A new railroad route has been opened from Philadelphia to New York. The Pennsylvania Railroad Company has complied with the order of the United States Courts directing it to open the Junction road to the cars of the Philadelphia, Wilmington and Baltimore and the Reading Railroad Companies, and the first through train to New York by the new trunk line passed over the Junction without difficulty. The Junction road was built several years ago under a charter granted by the State Legislature to the Philadelphia, Wilmington and Baltimore, the Reading and the Pennsylvania Companies. Each company was to pay one-third of the cost, and the road was to belong to the three corporations jointly, neither one to have exclusive control over any portion of it. This charter was confirmed by Councils, and the building of the Junction road was begun under the direction of the Pennsylvania Company. Three miles and a half were constructed, and bills rendered to the Philadelphia and Reading and the Philadelphia, Wilmington and Baltimore roads, each of which paid its third of the cost. The Pennsylvania people then completed the additional mile and a half, and paid for the work themselves. They rendered no bills to the other two companies, and claimed to own exclusively that part of the new road. The result was that the two former lines were denied the use of the road. Suit was entered by the other roads against the Pennsylvania, and it was only ended six weeks ago with a favorable decision for the contestants. When the decision was rendered negotiations were entered into with the New Jersey Central Railroad by the Reading and Philadelphia, Wilmington and Baltimore roads for running the trains of the Baltimore and Ohio road through to Jersey City. By this arrangement the first train over the new route were run on the first instant.

The Chief of the Bureau of Statistics in his fourth monthly statement for the current fiscal year reports the excess of exports of merchandise, stated in specie values, as follows: Month ended October 31, 1880, $31,657,154; month ended October 31, 1879, $39,944,857: ten months ended October 31, 1880, $105,458,320; ten months ended October 31, 1879, $201,443,193; twelve months ended October 31, 1880, $155,572,156; twelve months ended October 31, 1879, $269,257,132.... ....General Walker, Superintendent of the Tenth Census, in his annual report to the Secretary of the Interior, says it will probably be two or three weeks before complete statistics of the population of the country can be presented.

[St. Louis Western Watchman.]

Music Hath Charms, etc.

One of the great manufacturing interests of Boston, is the Emerson Piano Company, whose pianos are used with high appreciation and satisfaction throughout the world. In a recent conversation with Mr. Jos. Gramer, one of the proprietors, that gentleman remarked: I have used that splendid remedy, St. Jacobs Oil, in my family, and found it to be so very beneficial that I will never be without it. It has cured me of a severe case of rheumatism, after other remedies had failed.

FOREIGN NEWS.

The early freezing weather this year will greatly aggravate the distress of poor people in Russia. The ice in the Volga has closed that great river to navigation, and considerable quantities of grain, on the way from Southern Russia to the famine-stricken districts of the north, are tied up in transitu.....Dervish Pacha, Governor of Albania, is taking steps to disarm the Albanians and has forced the notables to sign a declaration of fidelity to the Sultan....The Madrid Imparcial says "Spain ought to conclude a treaty of commerce with the United States, and if the United States will consent to reduce the duties on Cuban sugar and Spanish fruit, Spain will reduce the duties on American cereals and flour,".....It is now officially announced that Secretary Thompson, of the Navy Department, has tendered his resignation, to take effect as soon as his successor is appointed. This step is taken by the Secretary to enable him to accept the chairmanship of the American branch of the Panama Interoceanic Canal Company, now quite under way..... .Affairs between China and Russia continue to wear a warlike look, ...The Paris Figaro of the 12th throws strange light on the melancholy case of the Baroness de Friedland, daughter of the Duc de Persigny. She has just been arrested, with her husband, on a charge of forgery.....Mme. Thiers, after a lingering illness, relieved by one flash of convalescence, died on the 11th in the arms of her sister, Mlle. Dosne. Her funeral will be celebrated at the Church of Notre Dame de Lorette. The deceased was only 58 years old.

A despatch from Cape Town, dated the 9th inst., says:—"Affairs in the Transvaal are very serious. The Boers are assembling in large numbers and threatening to resort to force. An attempt will be made to arrest the ringleaders, and a proclamation has been issued warning the Boers of the results of persistence in the agitation. A foraging party in the Leribe district has been compelled to retire, with the loss of thirteen colonials."..... A despatch to the Times from Dublin says each day brings fresh evidence that the country is hurrying on by strides and bounds toward revolution. Mr. Forster, Chief Secretary for Ireland, has left Dublin for London unexpectedly. It is stated that a battalion of the Scots Guards will shortly proceed to Ireland. The North German Gazette of Berlin criticises the government measures in Ireland, and says if the Peace Preservation act had not been allowed to lapse for party reasons, it would have been more effective in suppressing sedition than all the government's military measures. The Standard says:—"We understand that the parliamentary programme to be adopted at the meeting of Home Rule members in Dublin will include a resolution demanding from Parliament the removal of Chief Justice May from the bench. The meeting probably will not decide upon a scheme for land reform, as Mr. Parnell declares the onus of introducing such a measure lies with the government." A large land meeting was held yesterday near Ballina. An abusive resolution was passed protesting against the language of Chief Justice May, and expressing belief that the trial will be unfair if that Judge is allowed to preside. The brothers Moore, charged with being accessories to the murder of Wheeler at Oola, have been discharged on account of lack of evidence. A despatch to the News from Castlebar reports that a steward has been shot at Knockmore.

The Times, in its leading editorial says:—"The gravity of the situation in Ireland increases daily, and nobody can be surprised to hear that a Cabinet Council has been summoned to meet. We have reason to believe that Mr. Forster has, with most earnest and repeated remonstrances, induced his colleagues thus to accelerate the meeting of the Council. All doubt in regard to the state of the country has vanished in the presence of the charges of Justices Fitzgerald, Barry and Baron Dowse. Mr. Forster knows the meaning of these charges. The worst is proved to be substantially true."

[Milwaukee Evening Wisconsin.]

A Strong Conqueror.

According to an Illinois exchange, our days of Rheumatism are well nigh numbered. St. Jacobs Oil enters a rheumatic territory, and conquers every subject. That's right. We believe in it.

AGRICULTURAL NEWS.

The butter and cheese dealers of Chicago and Elgin, Ill., have organized for the purpose of protecting the trade against adulterated butter and cheese..... .By the analysis of Professor Collier he found the per cent of sugar in the stalk of Indian corn to be much greater the more perfect the stalks were and the nearer they were to maturity. The experiments demonstrate the importance of planting fodder corn thinner in order to get a more valuable crop.....The French are a nation of small farmers. There are more landowners in that country than in America. The farms are small; the majority are under twenty acres and a very large number under ten. It may not be that is the only reason for the money wealth of these people; they are notably economical and thrifty.....The experiment of growing ginger is likely to be tried at the South.

Chicago consumes more pounds of poultry every year than of beef .....The five great European Powers, Austria, England, France, Germany and Russia, together with the next most powerful, Italy, require for their armies, according to trustworthy estimates, 900,000 horses, and to maintain the full strength an annual supply of 125,000 horses is needed. In case of war breaking out, each country would need at least double the present number of horses before its army could be mobilized.....The Missouri State Board of Agriculture has passed a resolution asking the Legislature for at least $20,000 for the erection of buildings, the purchase of works and machinery for the manufacture of sugar from sorghum, ... The founder of the Colorado Farmer, Major John C. Peebles, and its associate editor and business manager, Mr. W. R. Case, both died at the close of November..... .The wool clip of California is put at 35,000,000 pounds—double the amount of any previous clip—isn't that rather too large an increase?..... At a late Short-horn sale Chillicothe, Ohio, 34 females averaged $95; 12 males, $76.50; $235 was the highest price paid for any animal.....John Johnson, the celebrated farmer of Cayuga Co., this State, lately died in his 90th year.

The Oklahoma movement in Kansas to settle the lands in the Indian Territory to which the Indian titles have become extinct is creating a good deal of excitement in the vicinity. The new settlers are near Hunnewell, where their camp presents a strange appearance, composed as it is of a nondescript throng, including farmers, mechanics, lawyers and doctors. The material of a printing office and two or three sawmills are among the numerous outfits. Not more than one thousand people are here, but many are coming in from all directions. Colonel Coppinger complains that the military force is not large enough to expel the intruders should a simultaneous advance movement be made. He has telegraphed for more troops and says:—"I will do my duty. The bulk of the settlers are well armed and many of them are desperate and reckless adventurers who will hesitate at nothing. They have been divided into military squads, each one of which is commanded by an officer and each is daily drilled in the centre of the camp. The Stars and Stripes are conspicuously displayed, while a number of the wagons are adorned with the same colors. The wagon covers are nearly all inscribed with "On to Oklahoma!" "No Turning Back!" "Strike for Homes!" "Uncle Sam is Rich Enough to Give Us All a Farm in Oklahoma!" and similar devices. The excitement in the Territory is intense. Bushy Head, chief of the Cherokees, is reported as saying that he would not be responsible for the result should the settlers elude the United States troops and get into the Territory. Two or three tribes are very hostile and it is known that there are a considerable number of them organized and armed ready to resist the encroachments of the white settlers. A despatch says that unless the government adopts a more vigorous policy a bloody conflict may be expected very shortly.

The next annual meeting of the American Poultry Association will be held at the exhibition rooms of the Cleveland Poultry, Pigeon and Pet Stock Association at Cleveland, Ohio, Jan. 31, 1881, at 3 P. M. Geo. S. Josselyn, Fredonia, N. Y., secretary.....Dr. D. M. Tindall, whose farm is near Red Lion, New Castle county, Del., has an apple tree from which he picked a crop of fruit in July. On the same tree a second crop formed, which he picked in November, and which was nearly as large and well formed fruit as that of July..... The cloverseed crop of the country this year is represented as much below a fair average yield. But about 40,000 bags were carried over from last year.....The lateness of the Fall rains has caused much uneasiness in California, but the wet season has now set in with a heavy, southeast storm that covered all the state, except in the most southerly counties. The rain-fall is plentiful and there is prospect of its continuance...Georgia is rapidly developing a great lumber business. The estimated product for this year will comprise 300,000,000 feet, valued at more than $5,000,000..... ....An American, largely interested in flour mills in the western states, has been inspecting mills in Hungary, with a view to adopting the machinery and system of working in America. The Hungarians have sent a commission to America to study operations. In order to be able to resist American competition in the Austrian markets.

Grocers and Storekeepers

pay 3 to 5 cents a pound extra for butter made with Gilt-Edge Butter Maker. It increase the production 6 to 10 per cent. Reduces labor of churning one-half. Gives a rich golden color the year round. Sold by druggists, grocers and general storekeepers. Send stamp for "Hints to Butter-Makers." Address, Butter Improvement Co., Buffalo, N. Y.

The Literary Revolution.

The credulity of the reading public has been severely taxed in the past year by the claims of the "Literary Revolution." A cyclopædia larger than Appleton's, which sells at not less than $3.00, and in no important respect inferior, for only $1.00; Macaulay's "England," formerly $7.50, reduced to $1.25; an $8.00 "Life of Christ" reduced to 50 cents: biographies by Carlyle, Lamartine, and Macaulay reduced from $1.25 to *three cents!*—these remarkable contrasts caused thousands who wished it might all be true to agree with the lady who frankly wrote to the publishers: "I read your advertisement, and immediately set you down as a grand swindle." Of course such claims could not long be presented without the real truth being discovered. The public is delighted to find its highest hopes realized. The verdict is emphatic.

"At these rates every man can, and every man should, own a library," says the Chicago Alliance.

"A few dollars will purchase a good library. We pronounce them the best books for the money that ever came to our notice," says the Boston Watchman.

"Your company is worth more to the common people than the Peabody fund," writes a Southern educator.

"The prices are phenomenal," says the Philadelphia Times.

"Is undoubtedly the cheapest thing of the kind on earth," is what the Boston Christian Register says of the Library Magazine.

"It will certainly enable many a poor student to fill his library shelves," says the Cincinnati Gazette.

It is worth the while of all our readers to examine the list of books carefully as fully presented elsewhere in this paper. They can depend upon the books being all they are represented, and upon getting promptly what they may order. An illustrated article on "Book Making," taken from the Scientific American, and full descriptive catalogue will be sent free on request, by the publishers. The books can be had of the leading booksellers in principal cities.

WE would advise all our readers who ship poultry, calves, game, eggs, dried fruit, apples, potatoes, etc,, etc., to the New York market to send to Messrs. E. & O. Ward, the well-known Commission Merchants of this city, for their "Circular of Advice" to shippers of produce. This circular is very carefully prepared and contains full instructions in regard to the details we have mentioned besides a large amount of other valuable information. The firm named rank amongst our oldest and most successful Commission Houses, having a business experience of over thirty-five years, and are therefore very high authority on the subjects treated of in their Circular. Their card and address will be found in another column.

WILLIAM BLACK, the eminent English novelist, will contribute a serial story to the next volume of the *Youth's Companion*. The same paper has engaged stories by J. T. Trowbridge and Harriet Beecher Stowe, and a series of papers on interesting topics connected with astronomy by Prof. R. A. Proctor.

Tropic Fruit Laxative, an agreeable substitute for pills and nauseous purgatives. One lozenge is the dose. Physicians prescribe it. Sold by druggists.

ELIXIR VITÆ FOR WOMEN.—Mrs. Lydia E. Pinkham, 233 Western Avenue, Lynn, Mass., has made the discovery! Her VEGETABLE COMPOUND is a positive cure for female complaints. A line addressed to this lady will elicit all necessary information.

For General Debility and Prostration Hop Bitters will do wonders. Prove it by trial.

Burnett's Flavoring Extracts.—There is no subject which should more engross attention than the purity of the preparations which are used in flavoring the various compounds prepared for the human stomach. BURNETT'S EXTRACTS are prepared from fruits of the best quality, and are highly concentrated. The "Fifth Avenue," "Continental," "Grand Pacific," and other leading Hotels use and endorse BURNETT'S EXTRACTS.

The Markets.

SPECIALS FROM THE CHIEF CENTERS.

Until Saturday, Dec. 11.

BOSTON—WOOL.—The market in domestic wool fully holds its own both as to prices and amount of sales, in comparison with the previous week. Somewhat over two million pounds have been moved, indicating a fair, quiet and healthy demand, especially considering the restrictions on business by the approaching close of the year. Fleeces have been comparatively quiet but firm and unchanged. Large sales of choice Ohio could have been effected at 48½c, but holders of such are asking and holding for 50c. There is a lively demand for fine delaine and combing wools, but operations are limited by the very scant stocks. Prices of these have further hardened and are up about 1c. The sales of California wool have been large, and are one of the special features of the week. A good deal has been done in Spring, including one sale of nearly half a million pounds. There is also a sale of 100,000 lambs' wool, and one of 165,000 Fall. For the moment, some manufacturers seem to have turned to these and Texas and Territory wools instead of deeces. Advices from the country are without special change and show that the most desirable wools there are very firmly held. The following are about present quotations: Ohio and Penn.—XXX and Picklock 50@52, No. 1 49@50, XX and above 48@50, X 47@48, Mich. X and above 44@46, Wis. X and above 43@45, New York 40@43, Vt., N. H. and Maine 40@43, Georgia 37@40, Combing, washed 48@55, do unwashed 35@40, Delaine, washed 48@52, do unwashed 35@40, Texas, eastern 27@30, Oregon, valley 38@40, do eastern 32@35, Nevada 22@28, Kentucky, unwashed 35@40, Western, unwashed 25@35, Unmerchantable 33@38. California—Spring 28@40, Fall 20@32, Pulled 33@50, Scoured 45@85, Tub washed 45@52, Scoured, fleece 60@95. Pulled—Super Western 35@38, do Eastern 45@50, do New York 40@45. Extras 40@45, Combing 38@45. Foreign—Canada combing 45@48, do pulled 31@45.

CHICAGO.—WHEAT. January, $1.05¼@1.05⅝@1.05⅝@1.06⅛@1.06@1.05⅝@1.05⅝ February, $1.09⅝@$1.⅜@1.07⅛@1.06¼. Winter wheat. Sales of No. 2 red at $1.03@1.03⅝ No. 2 at 90@91¼@94c; rejected at 87c. Hard Spring wheat—Sales at $1.05¼@1,05¼. FLOUR.—Choice and fancy winter extras $5.75@6.25; medium to good white winter do $5@5.50; winter superfines $3.75@4.50; good to choice western spring extras $5.00@5.50; low to fair western spring extras $4@4.75; choice to fancy Minnesota extras $5.75@6.50; common to good Minnesota do $5.@5 50; poor to fancy Minnesta do (patent) $6 @7.75; choice spring superfines $3@4; low to good superfines $2.50@3.50; Rye flour $4.90@5; buckwheat flour $5.50@5.75. Sales of bran at $9 50@11.60; of shorts at $11 on track, $13 free on board; middlings at $12 50 f. o. b; of coarse corn meal at $15.00; 1,000 beds New England do at $2.10; of feed at $18 for city ground. Corn. January, 40¾c; May 45¾@45⅝@45¾@45⅝c. Rye—Sales at 87c cash; December and January, 88c; February, 89c. bid. Barley—Sales cash, December and January $1,03. Pork December, $11.70@11.80; January $13.32½; February, $13.41½. Lard December, $8.40; January, $8 50; February, $8.03½.

SEEDS—Good to high timothy, $2 40@$2.50; poor $2.@$2.35. Clover, $4.50@$4.60 for prime medium, prime mammoth, $4.75@$5 Flax, $1.15. Prime buckwheat, 70c. BUTTER—Creamery quiet, and good to choice quotable at 30@32c, and fancy at 33c and some even held higher, while ordinary and offflavored stock quotable at 28@30c. Dairy salable to the local trade at 24@25c per lb for good to choice fresh made, and some very fancy makes occasionally for a shade more, while small orders of good to choice were filled at 20@23c; medium to fair dull at 16@18c. Ladle packed very dull at 15@17c per lb for fair to good, and choice fresh made would sell at about 18@20c. Packing stock about unsalable and nominally 12½@14c per lb for poor to good fresh made, with better stock, including some dairy, 14½@15c. Roll butter salable at 16@18c per lb for fair to choice fresh made, with occasional sales for a shade more.

CATTLE—Receipts not very large, mainly of medium and poorer qualities; prices have declined 5@10c per 100 lbs. Exporters took a few droves of prime selected holiday beeves at $6 50@6.70; Texans in light supply at $2.75@3.25 for poor to choice lots; stockers sold at $2.40@3.10; butchers' cows in moderate supply and rather dull as $2@3.25.

HOGS—Arrivals free and demand slack; prices on the whole range declined 10@25c per 100 lbs. Shippers had but few orders to purchase. Choice heavy packing and shipping lots sold at $4.80@5.20, but later declined to $4 60@4.90; light bacon in fair request at $4.40@4.80, but later at $4 30@4.50; mixed packing lots dull at $4 35@4.75, and towards the close easy at $4.35@4 55; common mixed and rough at $3.50@4; prices on Monday irregular and about 5c higher at $3.75@4 for common rough lots; $4.40@4.75 for heavy mixed packing; $4 40@4.60 for fair to choice light bacon lots, and $4.50@4.80 for fair to choice heavy shipping; lots.

SHEEP—Demand moderate during the past week and prices steady and unchanged. Demand mainly on local account. Rates ranged at $2.75@4.25, according to quality, chiefly at $3.25@3.90 for fair to good lots.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Dec. 11, 1880.

BEANS AND PEAS.—The market is quiet but strong at quotations. Some parcels of medium are going westward from the interior, and the fact materially stiffens that grade. Sellers do not seem alarmed at the pause in trade, as they feel good rates will be supported this Winter, as stock is not heavy at any point.

Marrow beans prime $1.90, fair to good $1.75@1.85, medium prime $1.65@1.70, other $1.50@1.60. pea $1.80, white kidney $1.80@2.00, red do. prime $1.85, do. other $1.65@1.75, black, or turtle soup, $1.60@1.65, lima $4.50@5.

BEESWAX.—Small sales are noted at 23½@24 for Western and Southern.

BUTTER.—The movement has been slow and it would not be surprising if some under good table grades soon show a weakness. The light supply of fancy and first-class stock is held strong, whether it sells or not. Some of the celebrated Iowa brands are reserved at 2c. above the extreme. Retailers of ordinary and good market or grocery grades do not seem pressed for stock; many of these buyers laid in a liberal quantity when prices were lower. Western butter has now good quality recommendation, and though high for Western suits the Winter purse better than State as the latter rules. Demand all local.

Creamery, Western choice 30c. good to prime, 33@35c; fair to good, 30@33c.; State creamery, poor to best, 23@32c.; sweet cream, 28@33c.; State dairies, entire choice, 27c.; good to prime, 25@26c; fair to good, 23@25c.; firkins, 23@28c.; pails and half tubs, 30c.; good to prime, 27@29c.; fair to good, 26@27c.; poor, 18@22c.; Welsh tubs, fresh fall 27@29c.; other 18@25c.; Western imitation creamery, 24@30c.; dairy, fresh, choice, 26@28c.; good to prime, 24@26c; fair to good, 21@24c.; poor to fair, 16@20c.; factory, late made, fine, 22@24c.; prime 19@21c.; fair to good, 15@16c.; poor to fair 14@15c.; rolls, choice, 22@23c.; other, 20@21c.

Receipts for the week, 24,870 pkgs. Exports for the week, 2,474 pkgs.

CHEESE.—Exporters have been in this week a little more freely for what may be called fair grades. Such parcels as could be had in the neighborhood of 11, with a sprinkling of orders for fancy stock, for which prices have settled to 12¼@12¾. The exports have reached 37,000 boxes, which in connection with an increased home demand has given a comparatively fair business. Quotations are for

State factory, fancy, at 12¾@12¾c.; do. good and prime, 11¾@12¼c.; do. fair to good, at 11@11¾c.; do. h'f skimmed, 8¾@10c.; Wisconsin factory, fine, 12¼c; do. good to prime, 11¼@12c.; do. fair to good, 10@11¾c.; Ohio factory, fine, 12@12¼c.; do. good to prime, 11¾@12c.; do. flat, fair to good, 10@11¾c.; do. poor to fair, 7@10c.

Receipts for week, 47,846 boxes.

Liverpool cable price, 63@63.

Steam for dairy products to Gt. Britain, 35@40s.

COTTON—Has had much less attention this week and the drift of the market is lower, as the advices from the South respecting damage to the crop by the recent cold wave have been more satisfactory. Latest prices are for

December at 11 63@11.84c.; January at 11.81c.; February at 11.98c.; March at 12.15@12.16c.; April at 12.29@12.30c; May at 12.42@12.43c.; June at 12.52@12.54c.; July at 12.61@12.63c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

Receipts for week, 41,811 bales. Exports do., 9,013 bales.

DRIED FRUITS.—Of apples the receipts are large, especially from Tennessee, but a large portion go to France to anticipate the new duty which goes into effect January 1. Prices strong. Peaches move out well, as also small fruits, with prices on a steady basis. Quotations are for

Evaporated apples at 8¾@9¼c. for better qualities; sliced apples at 5@6¼c. for good to choice North Carolina; 3½@4¼c. for Va. apples, 4@4½c. for Tenn. do; 4¾@5¾c for State do; 3¾@5¾c. for western Ohio and Mich. Peaches at 29@31c. for evaporated peeled; 14¾@15c. for unpeeled do.; N. C. peeled at 20@21c.; for the better qualities, unpeeled peaches at 6¾@7¼c. for halves and 6¾@7c. for quarters. Plums at 15@16c. Blackberries at 8c. Cherries at 18c. Raspberries at 25c. Whortleberries at 12@12½c.

Exports for week, 2,740 bbls. of dried apples.

Receipts for week, all kinds, 6,100 pkgs.

EGGS.—Receipts for the week, 5,515 bbls.; do last week 6,032 do. Very few straight lots of fresh arrive and buyers will not pay the extreme except for selections. The market is quiet at the price and imperfect fresh may be rated dull. Limed are in good demand, state leading the trade.

Near points 33@34, State and Pa. 31@32, Western fresh 31, seconds 29@29, Southern 3, Canadian 29@30, limed State 21@23, Western and Canadian 20@21.

FLOUR.—The market has had an easier tendency on the decline in wheat and larger supplies.

Latest prices are: $3.30@4.00 for very inferior to fancy superfine State and Western; $4.50@5.00 for poor to choice extra State and Western, odd lots and lines; $4.85@5.00 for choice to fancy do.; inferior to good white wheat, trade and family extras, $4 65@5.20; good to choice do. at $4.60@6.35; (fancy do. up to $6 75;) red and amber winter wheat inferior to choice grade and family, at $4 65@5 40; round hoop Ohio, $4.65@5 15; and trade and family brands of do at $5.25@6.50, the latter for fancy; St. Louis at $4.90@5.65 for inferior to good extra; $5 65@6.50 for good to choice and $6.50@6.85 for choice to fancy brands; Minnesota clear, interior to very choice at $4 65@6.10, Minnesota "straight," poor to fancy, at $5 60@7.25, and patent inferior to fancy at $5.75@8.50; city mill extra at $5 00@5.75 for fair to very choice for the West Indies, do. for England, $4.60@5 for poor to very choice spring wheat, and $4.90@5.65 for winter wheat product; do. trade and family extras, $5.75@7; do, for South America, $5.80@6.25; the latter for fancy; No. 2 at $3.25@3.75 for inferior to strictly fancy.

Receipts for week, flour, bbls. 135,750; corn meal, do. 5,975; wheat, bush. 623,014; corn, do. 402,300; oats do. 266,700; rye, do. 27,675; malt, do. 55,400; barley, do. 143,700. beans, do., 15,820; rice, pkgs. 2,700

Exports for week, flour, bbls. 61,250, corn meal, do. 3,375, wheat, bush 461,900; corn, do. 264,900; oats, do, 1,330; peas, do. 2,275; beans, pkgs. 1,500; rice, 7,500.

FRESH FRUITS.—Exports of apples for week 14,331 bbls. Strictly sound apples are firm. Stock that was secured from the frost in the country is held higher. Baldwins $2.10. Greenings, $1.75. Spitzenbergs, $2@2.25 high grade sweets bring full rates. Lady apples, choice, $1@3; other, $3@6. Well-packed half bbls. meet the best demand. Cranberries are quiet but sellers have a good end of the market and quote strong prices. Cape Cod bbls. fancy, $7@7.50; good to choice, $6@6.75; poor to fair, $4@5.50; N. J., bush. crates, $1.50@2.25. Florida oranges are in better demand. Some prime stem-picked fruit is arriving for holiday use. Choice half bbl. boxes, $3.50; fair to good, $2.50@3. Pears and grapes have small inquiry. Boston pears quoted $3.50@6 ₱ box. Catawba grapes 5@7c. Peanuts quiet and steady; Va. hand-picked 5@5, other, 3½@4½, shelled 1@1½. New hickorynuts ₱ bush. of 50 lbs, $1.75, Bull nuts, 50@60. Black walnuts 50c. Pecans 9½@10c.

GRAIN.—The market has felt this week the reaction consequent upon the severe strain given it on the speculative activity only latterly, and has settled back a little and closed with a weak feeling. This turn about in prices has been hastened by the high rates bringing out supplies from farmers' hands, and the amounts on the way to market, or the "visible supply," shows a marked increase the past week. Besides accumulations have followed here on the diminished export trade as an outcome of the speculative fever. Wheat has been freely offered and has sold lower. Export demand has been very light; the shipments this week a little less than 40,000 bush. Latest sales of wheat are of:

No. 1 white at $1.16@1.18 do. December at $1.17¼@1.17¾, do. January at $1.18¾@1.19¾, do. February at $1.20¾@1.21¾, do steamer at $1.16; No. 2 white at $1.16; ungraded white at $1.14@1.18¾, mixed Winter at $1.17¾@1.17¾, No. 1 red at $1.26@1.27, No. 2 red at $1.19¾@1.20¾, do. December at $1.12¾@1.20¾, do. January option at $1.20¾@1.22¾, do. February at $1.23@1.24¾, do. May at $1.22¾@1.23¾, No. 3 red in lots at $1.15¾@1 17, ungraded red at $1.12¾@1.24¾, No. 2 Spring at $1.16, ungraded Spring at $1.14. Rye at $1 for prime State and 86c. for No. 1, and No. 2. Corn is freely offered at lower prices; latest sales are of New York No. 2 at 58¾@58¾, do. December at 58¾@58¾, do. January at 58¾@59¾, do. February at 59@59¾, new No. 2 at 57 ungraded mixed Western at 55@59, No. 3 at 55½@56, New York steamer mixed at 56@57, No. 2 white at 58@58¾. Oats are to be had at a decline. Sales of No 1 white 48@49, New York No. 2 white at 45¾@46¾, No. 3 white at 43¾@44¾, New York No. 1 quoted at 44¾, New York No. 2 at 44½@44¾, do. December at 44¾, do. January at 45½@45¾, No. 3 at 43¾, ungraded white Western at 44@47½, ungraded mixed Western 41¾@44, No. 2 Chicago quoted at 44½ afloat.

HAY AND STRAW.—Receipts are not more than the market can stand to permit a steady range of prices. Medium grades have most attention; latest prices are for

Selected retail State hay $1.25@1.35 per 100 lbs; other grades of timothy at $1.30@1.25 do, grades for railway and shipping wants at $1.05@1.10, clover mixed at 1.10, clover clear at $1, salt hay at 60@65c.; Straw—long rye, $1.05@1.10, short rye, oat, wheat and barley 65@70.

Exports for the week 328 bales.

HOPS.—Exports have dropped from 3,793 bales last week to 1,824 bales this week, and brewers keep out of the market as much as possible; consequently prices are rather weak.

POULTRY AND GAME.—A prolonged presence of common or stale lots of dressed poultry broke the demand and the market though not better supplied has received a good winter movement. Christmas stock should be here by Dec. 23d. Large turkeys and fat geese then wanted.

Turkeys, N. J. choice, 11@12, State do. 10@11c, good to prime 9@10, Western, choice, 9@10, good to prime 8@9, fair to good 7@8, Phila., dry-picked, 12@13, Chickens, do., 12@13c.; Bucks Co. 10@12c.; N. J. 9@11c.; State scalded, 8@10c.; Western, do., 8@9c.; poor to fair 5@6c. Fowls, Phila. dry-picked, 10@11; N. J., 10@11c; scalded, do., 8@10c.; State and Western prime, 7@8c.; poor to fair 5@6c. Ducks, choice 10@12c.; other 7@9, Geese, choice 10@11c.; other, 7@9. Squabs, light ₱ doz. $1.50@1.75; dark $1.

Live poultry in large supply from the West, prices low and sale slow.

Fowls and chickens 6@7¼c. roosters 3@4.; turkeys 7@9. Ducks prime 65@75 common 40@50. Geese extra $1.62@1. 87 other 90@$1.37. pigeons 20@25.

There is a better feeling in the game trade with crisp weather. We quote prime lots only. Rabbits plenty and lower. Venison saddle quicker than whole deer.

Wild ducks, canvas back $1.50@1.75, red heads 55@75; mallard 50@65, teal, 30@40c.; common 25, quail prime trapped ₱ doz $1.25, poor 90@$1, partridge, 40@90 the latter for State. Grouse $ 1 12@1 25, drawn 80@$1, Hares, 30@35, Rabbits, 15@20, Venison, Minn. short saddle, 14@15c.; other 12@14c. Whole deer, 8@9.

PROVISIONS.—Hog products have been freely offered and have ruled as a rule easy.

Mess pork on the spot is quoted $13 75 for old in such lots as are wanted for export, while new in round lots for this month can be had at $13. Bacon at 7⅜ for long clear, and 7¾ for short clear. Lard, Western steam at $8.82½@8 85 for spot lots, $8.85 for December, $8.92½@8.95 for January, Stearine at 9. Tallow at 6½ for prime.

Receipts for week, beef, bbls. and tcs.; 1,000; pork, 13,975 bbls.; cut meats, 43,650 pkgs.; lard, 27,100 pkgs.

Exports for week, beef, bbls. and tcs. 1,150; pork, 4,200 bbls.; cutmeats, 14,221,088 lbs.; lard, 1,478,250 lbs.

SEED.—Clover is moderately active; sales at 7¾@8¾ for western; fair and strictly prime to 9 for extra choice. Timothy is slow at $2.75@2.85.

TOBACCO.—Export trade is better and there is a good home demand, with prices as last week.

VEGETABLES.—Exports of potatoes for week, 6,600 bbls. There has been some call for common sound potatoes; choice marks are firm, sellers holding the best position at the moment. Va, sweets out. Onions a shade off, though prime are steady Cabbages higher; cauliflower scarce; celery higher. Few good counts of pumpkins remain.

Potatoes, E. Rose Eastern double heads $2@4.25 State. $1.75@2; do. in bulk $1.50@1.87; Burbank and prolific $1.87; snowflake $2@2 25; do. in bulk, $1.75@1.87; peerless, $1.25@1.62; peachblows $2@2.25. Sweet Del. $2.50@3. Onions, white, $5@5.50 yellow, $3.25@3.50; red, $3.25@3,50; Chester, $3.25, beets, 75@$1, carrots, $1.25@1.50; marrow squash 40@50; Hubbard, 75c.@$1; cauliflower, $2@5; cabbage, ₱ 100, $4@7; red, do. $6@8. pumpkins, $3@5; celery, per dozen, $1.50@1.75, turnips white, 40@75. Russia 50@75.

WOOL.—Demand is very fair and prices strong but no higher; latest prices are

X and XX. Ohio fleeces at 48@48¼, medium do. at 51 fine western delaine fleece at 48@51, Ohio combing at 50@52.

LIVE STOCK MARKETS

NEW YORK, Saturday, Dec. 11, 1880.

BEEVES.—Receipts for the week 10,510 head; do. last week 12,084 do. Small supplies and no prospect of heavy receipts owing to the severe weather of a day or two past gave prices considerable start. Prime cattle advanced $1.00 per head and common to medium ½c per ℔, compared with Wednesday last. A lot of poor Va. cows sold at 7. to dress 54 lbs State dry cows sold at 2½@2¾ live weight, some at only $11@12 per head, ordinary to fair native steers 8@9½c to dress 55@56 lbs, good to choice 9¼@10¼c, to dress 56@57 lbs. Supply offered no fancy or extra cattle.

SHEEP AND LAMBS.—Receipts for week, 21,919 head; do. last week 31,529 do. Butchers seized the small supply quickly and the market closes strong. Common to choice sheep 4¼@5½, lambs 5¾@6¼, a few at $6.30 per 100, mixed lots sheep and lambs 4¾@5¼.

SWINE.—Receipts for the week, 36,481 head; do. last week 48,829 do. Market firmer with prime Western wanted at the close.

Live hogs corn 4.75@4 87, per 100, country dressed pork light 7@7¾, medium 6¾@6¾, heavy 5¾@6, city dressed State 5@5¾, city dressed Western 5½@6¼, Pork tenderloins in boxes 10.

LIVE CALVES.—With some limit to receipts the market is good for all prime calves. A few extra N. J. live have made 8c. Dressed are quoted full as they are plenty and vary in quality.

Live calves, N. J., prime 7¾, State, prime 7, fair to good 6@6¾, Mt. Holly, heavy, 6@7, medium to light 4@5¼, buttermilk, 2¾@3, grassers, 2@2½c.; dressed calves, choice 9¾@10, fair to prime 7@9, common 3@5.

COWS AND CALVES.—Supplies light, but fully ample for the prevailing quiet market. Late sales quoted $25@42 per head for common to fairly good milkers. Extras would bring previous figures.

FARM IMPLEMENTS & SEEDS.

Call on or write to R. H. ALLEN & CO., New York, for whatever you want of the above. Address 189 & 191 Water St.

THE ATLANTIC MONTHLY

FOR 1881

WILL CONTAIN

Serial Stories,

By ELIZABETH STUART PHELPS, author of "The Gates Ajar," etc.; GEORGE P. LATHROP, author of "A Study of Hawthorne"; W. H. BISHOP, author of "Detmold"; W. D. HOWELLS, author of "The Lady of the Aroostook," "The Undiscovered Country"; and HENRY JAMES, Jr., author of "The American," "The Europeans," etc.

Short Stories and Sketches,

By HARRIET BEECHER STOWE, T. B. ALDRICH, SARAH ORNE JEWETT, CONSTANCE FENIMORE WOOLSON, MARK TWAIN, ROSE TERRY COOKE.

Essays

On biographical, historical and social subjects, by GOLDWIN SMITH; EDWARD EVERETT HALE, on the social, political and religious life of the world in the time of Christ; WILLIAM M. ROSSETTI, on "The Wives of the Poets;" JOHN FISKE, on the "Early Culture, Myths and Folk-Lore of our Aryan Ancestors;" R. L. DUGDALE, on "The Relation of Society to Crime."

Travel Sketches

In Norway, by H. H., and by excellent writers on other picturesque lands and interesting people.

Discussions of Living Questions

in politics, education, industry and religion by persons specially qualified to treat them thoroughly and in an unpartisan spirit.

THE ATLANTIC furnishes its readers in the course of the year as much reading as is contained in *Twenty Ordinary Volumes* of 300 pages each.

TERMS: $4.00 a year, in advance, *postage free;* 35 cents a number. With superb life-size portrait of Longfellow, Bryant, Whittier, Lowell or Holmes, $5.00; with two portraits, $6 00; with three portraits, $7.00; with four portraits, $8.00; with all five portraits, $9.00.

☞ *The numbers for November and December will be sent free to all new Subscribers for* THE ATLANTIC *for* 1881 *who remit before December* 20.

Remittances should be made by money-order, draft or registered letter, to

HOUGHTON, MIFFLIN & CO., Boston.

THE

Rural New Yorker's

REMARKABLE

CLUBBING COMBINATIONS,

For 1880-81.

Read Them.

Six of the most Enterprising Journals in the country Club with the Rural for nearly the price of one.

The Inter-Ocean,
Globe Democrat,
Detroit Free Press,
New York World,
Pioneer Press,
N. Y. Evening Post.

The Greatest amount of Reading Matter and the Lowest Prices of any Clubbing Combination heretofore offered.

The Rural Home fully supplied—The News of the World—the most trustworthy Agricultural and Horticultural Information—Seeds, Plants—All for about the price of one good paper.

THE WEEKLY INTER-OCEAN (Chicago, Ill.) has no superior as a first-class secular and political newspaper. It is a large, eight-page journal, with seven columns to the page, price $1.15. It will be sent one year with the RURAL NEW-YORKER, and the RURAL'S seed and plant distribution, for only $2.75.

THE WEEKLY EVENING POST (New York), the leading weekly independent, political and literary paper of New York, price $1.50, will be sent one year with the RURAL NEW-YORKER and the RURAL'S seed and plant distribution, for only $3.20.

THE WEEKLY DETROIT FREE PRESS (Detroit, Mich.), one of the most popular weeklies in the United States, combining wit and humor with the best literary and secular matter; ALSO the "Household," a bright and sympathetic paper for the home circle, will be sent one year with the RURAL NEW-YORKER and the RURAL'S free seed and plant distribution for only $3.50.

THE WEEKLY PIONEER PRESS (St. Paul, Minn.), the leading secular and political weekly of the great Northwest, price $1.15, will be sent with the RURAL NEW-YORKER one year, and the RURAL'S seed and plant distribution, for only $2.75.

THE WEEKLY NEW YORK WORLD (New York), a live, enterprising and ably-edited newspaper, full of the latest political, secular and literary news of the day, price $1.00, will be sent with the RURAL NEW-YORKER one year, and the RURAL'S seed and plant distribution, for only $2.75.

THE WEEKLY GLOBE-DEMOCRAT (St Louis, Mo), the leading secular and political newspaper west of the Mississippi River, ably edited and in every respect a first-class weekly journal, price $1.00, will be sent one year, with the RURAL NEW-YORKER and the RURAL'S free seed and plant distribution, for only $2.75.

Specimen copies of any of the journals here announced as clubbing with the RURAL NEW-YORKER *will be sent without charge to all who apply. The application, however, must be made to the journal of which specimen copies are desired. Send for them!*

TERMS FOR 1880.

THE subscription price of THE RURAL NEW YORKER is

Single Copy, per Year	$2 00
" " Six Months	1 10
Great Britain, Ireland, Anstralia and Germany, per Year, post-paid	$3 04 (12s. 6d.)
France, " "	3 04 (16¾f.)
French Colonies, " "	4 08 (20¾f.)

Any one sending a club of eight is entitled to one copy, one year, free.

Agents will be supplied with canvassing outfit on application.

Entered at the Post-office at New York City, N. Y., as second-class mail matter.

GENERAL VERTISING RATES OF THE RURAL NEW-YORKER.

Inside (Agate space)	40c. per line.
" 13th page	50 "
Outside or last page	60 "

Discount on 4 insertions, 5 per ct.; 8 ins., 10 per ct.; 13 ins., 15 per ct.; 26 ins., 20 per ct.; 52 ins., 25 per ct.

☞ No advertisement inserted for less than $2.

NOTICE TO AGENTS.

Any respectable person may become our Agent.

Postmasters are requested to act as our Agents.

A Cash Commission of Twenty-Five Cents will be allowed Agents for each yearly subscriber.

One name or a dozen names may be forwarded at any time. Credit is given the Agent for every name sent until canceled by Premium.

Reading for the Young.

FARMING FOR BOYS AND GIRLS.—NO. 7.

HENRY STEWART.

Methods of Plowing.

When one knows why he should plow the soil and how the plow should work, he will soon be able to become a good plowman, if he will use care and observation in his work. "Practice makes perfect," but perfection is only reached by thoughtful and careful practice. Otherwise, a habit of doing poor work may very easily become fixed, which a young man may find it very difficult to break. A good plowman who understands his work will be able to choose his own methods of doing it, but there are certain cases always occurring for which distinct rules may be laid down. For instance, there are some soils that need to be plowed in lands, and some in ridges, and sometimes again, what are called twice gathered ridges are desirable or necessary; in other cases as in laying down upland to grass it is very desirable to leave the ground flat and without ridges and dead furrows

FIG. 460.

By plowing land in ridges it is drained to some extent, as will be explained when we come to consider the subject of drainage; and the wetter the surface is the higher the ridges and the deeper the dead or open furrows are made. Ground is usually plowed in lands and these are made of different widths as may be wished by the farmer. A land is a narrow strip of ground across a field, which is plowed by going back and forth on each side of

FIG. 461.

the first or back furrow alternately. The first furrow should be made perfectly straight and the next which is plowed in returning back to the starting point, is laid neatly against the first one as shown at figure 460. But there are two ways of doing this, one right and one wrong. If the back furrow is placed as shown in figure 461, a hard strip of ground is left unbroken and all the defects of bad plowing will be found along this strip when the

FIG. 462.

crop is grown. If on the other hand the first furrows are turned outward as at figure 462, and the plow is then run under these, as marked by the dotted lines, the back furrow will be left soft and thoroughly broken up as seen at figure 461, and the whole ground will be left in equally good condition.

The first furrow is plowed by guides, usually

FIG. 463.

long stakes set up at each end of the land, as marked at figure 463. The three stakes are set in line and by starting from A the plow will go perfectly straight if the two stakes at B are kept in line. If the horses should swerve from the direct line, they should be stopped immediately, brought in line again, or even backed if necessary, and started again. For it is upon the correct plowing of the first furrow that the even finishing of the land depends. This is so important that the young farmer should practice laying out land and making back-furrows whenever he has an opportunity. The good plowman may indeed feel a pride

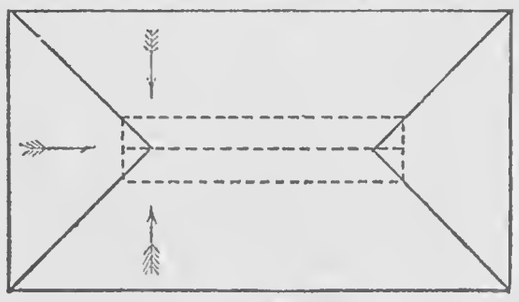

FIG. 464.

in looking at his furrows, straight as a line and even as the rule, because such work is rarely seen, as well as because the full success of all his afterwork depends upon it.

In plowing ridges the first few furrows are the most deeply plowed and laid more on edge, and on approaching the sides of the ridge the furrows are gradually shallowed and laid more nearly flat so as to leave the ridge somewhat rounded in form. Flat plowing without back or open furrows may be done by plowing around the field, or with the swivel, or reversible, plow. In the former case it is bad practice to begin on the outside of the field, because this leaves a disagreeable bank against the fence, which is made larger and broader at each plowing. The field should be laid out from the middle by measuring from each side to find the center line and from each end to find points that are equally distant from the sides and ends, measuring in the direction as shown by the arrows in the diagram, figure 464. A piece of land is then plowed, as shown by the dotted lines, of the same shape as the field and every part of which is equally distant from the fence opposite it. Then by plowing around this the fence is gradually approached, and if the furrows are evenly plowed the field will be finished without a break, leaving a perfectly level and smooth surface, the first back-furrow, even, being unseen, if it is plowed as previously directed.

The swivel plow is an excellent implement for flat plowing. The share and mold board are made to turn upon a swivel and by swinging these round at the end of the furrow the plow which was before a right hand plow, is made into a left-hand one, and the furrows are turned one after the other in the same direction from one side of the field to the other. It is well to begin in the middle of the field, plowing a back furrow as before described, then finishing one half of the field and afterwards the other half; and completing the whole by going around the field and making a headland of the ground upon which the team was turned. The use of this kind of plow may be made very convenient in many cases, and especially when planting needs to be done in a hurry, for as there are no lands, the harrowing and planting, or sowing, may be kept close up to the plow without waiting until the whole field is finished. There is much more to be learned about plowing, by the use of one's eyes and head in the field, than can be told in any book, and it should be the desire and object of every young farmer to study this out for himself, after learning something of the principles of the art which have been here only very partially referred to.

NUT-BEARING TREES—No. 4.

MAUDE MERIDITH.

The Chestnut.

"And a faint white mist, like a ghost was seen
Creeping over the valley green.
Close at the door of each guarded cell
He breathed the words of his wonderful spell,
Up sprang the wind with a loud "Ho! Ho!"
And scattered the treasures to and fro;
And the children shouted "Come away!
There is sport in the chestnut woods to-day."

This very valuable nut tree, Castanea vesca of Linneaus, and Castanea vulgaris of Lamb, is pretty well known all over the world, and in some nations, Italy and Spain, and in Eastern Europe and Western Asia, the chestnut crop is equal in importance to the wheat crop in Ohio. Chestnut bread constitutes the principal food for more than a hundred millions of people—the healthiest, handsomest, and most shiny people in the world. It abounds especially in France, on the banks of the Rhine, and on the slopes of the Jura, the Pyrenees, and the Alps. The chestnut is said to have been found by the Romans first at Castanea, a town of Thessaly, whence the fruit was named by them Castanea nut. The tree grows very thrifty, wild in forests or in the open glade and, when growing in

THE CHESTNUT.—FIG. 465.

the forest in favorable soil grows very tall and straight. In open places it spreads its branches majestically, grandly and prevents a most attractive appearance.

Some of the oldest and largest trees in the world are of this species. One of the most famous is that on Mount Etna, which has often been described by travelers, and can be seen from Acl Reale. It is 160 feet in circumference, and has a hollow trunk, the interior of which serves as a retreat for shepherds and their flocks. It is called the hundred-horse chestnut, from a tradition that Joanna of Aragon once visited it, accompanied by all the nobility of Catania, and that the whole party found protection beneath it from a sudden storm.

One of the oldest trees in England is at Trotworth in Gloucestershire, which was a boundary mark in the reign of King John, and in France there is a remarkable one at Lancerre, which is believed to be about 500 years old, and is still very productive.

Will not every boy of the RURAL reading this, plant a chestnut, and perhaps 1,000 years from now some other boys may have cause to thank him for it, for you know the lines:

"He who a tree doth plant or set
Puts after ages in his debt."

The appearance of the chestnut tree is very graceful, with long patulous boughs and delicate but ample foliage, the leaves being oblong, lanceolate, serrated with pointed teeth and smooth and green on both sides.

It prefers a deep, sandy soil, often growing on the sides of mountains, but always avoiding marshy regions. It thrives well in the most barren soil and chestnut trees 100 feet in hight, and from three to seven feet in diameter, can yet be found on the hill-tops of southern Ohio, growing in soil which cannot be made to produce five bushels of corn to the acre, and where oak, hickory and other trees are mere dwarfs.

The timber of the chestnut is most durable and excellent, and it is believed that the roof of Westminster Abbey and of the church at Great Yarmouth, erected in the reign of William Rufus, are of this timber.

The American chestnut has sometimes been separated from the European as a distinct species, but upon insufficient grounds.

The most esteemed of the French varieties is the *marron*.

The chestnut is found in rocky or hilly woods from Maine to Michigan and as far south as Kentucky. Its wood is highly esteemed for posts and rails in fences, and is also used for various articles of furniture and for house-building, office and household decoration.

The European chestnut was introduced into Virginia by Jefferson in the latter part of the last century.

There is also a smaller American variety, the Chinquapin nut (castanea pumila, Michaux), found from Ohio to southern Pennsylvania, growing from six to 20 feet high, having a solitary nut not half so large as the common chestnut, but very sweet and agreeable to eat. The bark of this tree has also been used as a medicine, its action being that of a moderate astringent and tonic.

The chestnut is eaten either raw, boiled or roasted, or is ground into meal for puddings, cakes and bread. Few persons who have lived in the rural parts of the United States but can refer to some of the most pleasant reminiscences of their childhood days in connection with chestnutting.

In pleasant Autumn days of Saturday school vacations I remember little parties of scholars strolling off to some neighboring hillside, until they reached a cluster of the beautiful trees, and while the girls spread their shawls on the grass beneath, the boys climbed the trees to shake down the plump brown nuts. Many were the merry nutting frolics of our early years. Roasting chestnuts reminds one of the times and times they have sat by the fire and, like "Jean," who—Burns tells us in his halloween games—

"Slips in one wi' tentie e'e;
Wha 'twas she wadna tell;
But this is *Jock* an' this is *me*,
She says it to hersel'."

It was here—

"The auld guid wife's weel-hoordet nit
Are round an' round divided,
And monie lads' and lasses' fates
Are there that night decided:
Some kindle, coutny, side by side,
An' burn thegither trimly;
Some start awa' wi' saucy pride,
An' jump out-ower the chimlie
Fu' high that night."

The chestnut is one of the most rapid-growing trees; is simple and easy to grow. Under favorable circumstances a bearing chestnut tree 25 feet in hight can be grown from the seed in five years. The proper way is to plant the chestnut where it is desired that the tree shall grow. Like the hickory, the chestnut does not take kindly to transplanting.

Any farmer who desires it can have a chestnut grove, or as many chestnut trees as he desires, by planting chestnuts. They should be planted before they become dry and shriveled—within a week or two after gathered—the sooner the better. The chestnut should be about half buried in the ground, and then covered with leaves or litter—barely covered, not buried or smothered. Twenty chestnuts should be planted for every tree desired; for although every healthy chestnut will germinate, and is liable to produce a tree, provision should be made against moles, mice, chipmunks and other vermin.

LETTERS FROM THE COUSINS.

In Mourning.

EVERY one of the cousins will join us in our sorrow and sympathy for the parents and sister of the two interesting cousins whose painful deaths at so young and interesting an age we have to report at this time. The following letter will tell its own sad story.—UNCLE MARK.

DEAR UNCLE MARK:—Two of our beloved girls and your accepted nieces are dead, viz: Josephine and Laura Jane Kenworthy; they had a deep love for the RURAL and talked as much about you as if you had been a real uncle. Laura's letter was in RURAL Nov. 27 she died on the 19 and Josephine on the 15th, of diptheria, Laura looked with eagerness for her letter which came too late to gratify her. When my dear wife and I saw the letter you kindly put in, our hearts felt nigh breaking. Just one week too late for her beautiful eyes to see it. I shall keep that number as a sacred treasure as long as I live; may God bless you for putting it in, we think you have a kind heart towards the little ones, your pleasant fiction gives pleasure to many lonely cottages. Laura Jane was thirteen years old Josephine nine years. One lonely little bird Helena is all we have left. These lines leaves their father and mother in deep sorrow. Yours gratefully.

H. and M. KENWORTHY.

Chebanse, Iroquois Co., Ill.

DEAR UNCLE MARK:—I think it is time to thank you for the seeds you sent me last Spring. I sowed my pinks and, when they were up nicely, a cat upset the box, and my pa said I must tell my Uncle Mark about it. The portulaca never came up, and the phloxes and mignonette ran all over the bed. My muskmelons were splendid. I had three bushels of carrots and I don't know exactly how many of turnips, and 23 pumpkins. I do not have much time to work in the garden, for I am the dairy-maid, and I care for the fowls. I had 40 to kill this year. ANNIE.

Temiscamque, Canada.

DEAR UNCLE MARK:—My papa does not take the RURAL, but I see it at my grandpa's, and read the little cousins letters, and thought I would write one to. I am eight years old, and I have a little brother two and a half years old, and we each have a pet rabbit and duck. I had some flowers last Summer, but our yard is so shady, and the chickens bothered us so, it was hard to save them. Please remember me when you send your flower seeds in the Spring. MYRTIE SWEET.

Armenia Mountain, Pa.

Bad Dreams, Disturbed Sleep, Indigestion, Stomach Gas, all vanishes before Hop Bitters.

Sabbath Reading.

VOICES OF THE LEAVES.

THERE comes a gentle whisper
Amidst the forest trees,
And tender budding leaves are seen
Of fragile form and softest green,
Kissing the Spring-time breeze.

They gladly woo the sunbeam,
They gaily open forth,
And robed in youth, all joy and light,
They deck as with a vestment bright
The pleasant scenes of earth.

Anon a deeper murmur,
The boughs wave to and fro,
And through the crowded forest leaves
And 'twere a mighty sea of leaves,
In an unceasing flow.

The storms shriek 'midst the branches
The midnight tempests wail,
And in the dark leaves' sterner hue
Ye see how oft they've struggled through
Wild conflicts with the gale.

Again, how deep a sighing
The sombre forest hath,
For now the dancing leaves are seen,
With shrivelled form and withered mien,
Scattered around our path.

They crush beneath our footfalls,
They rustle near our door,
And show us in their swift decay,
How joys once cherished fade away
To bloom on earth no more.

What say the leaflet voices
In crisp and dreary tone?
Do they not whisper to the heart
How Spring and Summer must depart
And leave but Autumn's moan?

Do they not tell the story
"Earth's fashions all decay,"
And bid us through our toil and strife,
Look ever to the Tree of Life,
Whose leaves fade not away?

CHRIST'S INTERCESSION.

THERE was one work completed by Christ, the work of atonement. When He bowed His head on the cross, and cried with a loud voice, "It is finished!"

"The great redemption was complete,
And Satan's power o'erthrown."

But there is another work which goes on continually, Christ's work of intercession. Ever since He ascended into heaven, blessing His disciples with His uplifted hands, He has been interceding, praying, pleading before God, with those pierced hands outspread in continual advocacy for His church on earth—His tempted, tried, suffering, sinning church! The Shepherd has never for a moment forgotten His few sheep in the wilderness; He has never ceased to present before the Father His own atoning work, and His perfect righteousness, as the procuring cause of every blessing bestowed on the flock which He hath purchased with His own blood.

That for which a man gives a high price is not likely to be forgotten by him; he cares for it, takes trouble to secure it from evil, puts a high value upon it; so does Christ value His purchased possession. How unlike is His care for us from the heathen idea of godhead! The deities of the most polished nation of antiquity were supposed to sit apart on Olympus enjoying themselves in utter indifference to the affairs of men: whereas, for us there is no care so tender, no love so warm or self-sacrificing as the love of Him who reigns above and yet intercedes above—the "Lamb that is in the midst of the Throne," "a Lamb as it had been slain!"

Let us think for our encouragement of his continual intercession. And let us live as those ought to do who have been redeemed at such a price, and who are of value in the sight of such a Redeemer.

TIMES OF NEED.

WHEN the mind is filled with questionings as to the great and blessed truths which we had held firmly and from which we had derived peace and strength, this is time of most urgent need. Then we should, with deepest humility and intensest earnestness, go to the throne of grace. Oh, if believers did, at such times, only comply with the exhortation of the apostle, and go "boldly unto the throne of grace," how much better it would be than allowing the doubts to do their deadly work in the soul!

A season of adversity is a time of need. Very many of God's people have, within the last few years, experienced difficulties and loss in temporal matters—blow followed blow until it appeared as if all must be taken; many of them found that "prayer makes the dark red cloud withdraw." Let us then come boldly unto the throne of grace that we may obtain mercy and find grace to help in time of need.—Rev. G. W. Humphreys.

GOD knows what keys in the human soul to touch, in order to draw out its sweetest and most perfect harmonies. They may be the minor strains of sadness and sorrow, they may be the loftier notes of joy and gladness. God knows what the melodies of our nature are, and what discipline will bring forth. Some with plaintive tongue must still in lowly vales of weary way; others in loftier hymns sing nothing but joy; but they all unite without discord or jar as the ascending anthem of loving and believing hearts finds its way into chorus of the redeemed to heaven.

CHRISTIANITY is to me, and has ever been, since I learned to live by it, not so much a fresh mystery as a revelation of mysteries—a "mystery shown," not a clouding, but an unveiling; not a new riddle whose glory is that being is the divinist, but a solution of many riddles, although indeed not of all.—Mrs. Charles.

PERSONAL ITEMS.

Nathan Barnes Greeley, brother of Horace, is a poor farmer in a barren part of Pennsylvania.

Prince Bismarck is now so much improved in health that he is laying plans for hunting excursions next year.

The friends of Senator Lamar apprehend that his health will not permit his attendance in the Senate again. He is said to be very feeble.

Mr. Edward Langtry, the husband of the "Jersey Lily," arrived in New York by the steamer City of Berlin on Wednesday. It is said the "Beauty" will also visit us.

Professor David O. Swing, talked about leaving Chicago for New York, but his congregation having raised his salary from $7,000 to $10,000 he will stay with the wicked of the West.

M. Fortado is the largest single holder of French government funds, of which he is the owner of $16,000,000 at par value, the interest on which is one million francs a quarter. This is less than one-half the sum received every quarter by Mr. William H. Vanderbilt from the United States Government securities he owns.

Olive Logan thus describes Mr. Burnand, the new editor of the celebrated comic Weekly, the London Punch. "One would never take Burnand for a humorist of the first water (as he is) by his appearance. His grizzled hair, parted in the middle and decorously smoothed down upon his forehead, his fan-shaped beard, parted also in the middle and brushed away on each side, his wide turn-over collar, beneath which a large black sailor bow takes the place of the more fashionable styles of necktie, all give him the air of a rather serious man of business, who cares nothing for dress except to be clean and tidy."

Mr. John Bright has become a very outspoken champion of republics. In his great speech at Birmingham, on November 16, he said: "For my share, I do not learn from history that everything has been wisely done that has been done by monarchs and by statesmen. On the contrary, almost all the greatest crimes of history have been committed and all the greatest calamities in history have been brought upon mankind through the instrumentality—the direct instrumentality—of monarchs and of statesmen. I would rather leave the judgment of an intelligent and a moral people informed as to their interests and their duty."

"Too Sick to Attend to Business."

Mr. Waldo M. Claflin, a manufacturer of Philadelphia, gives this written testimony to the value of Compound Oxygen: "Two years ago I was sick with what was called *Consumption. I was too sick to attend to business—even to write a letter.* My physicians got discouraged, and took me almost by force to your office. I began to improve very soon, so that all my friends were surprised. In two months I was able to resume business, increasing in weight, strength, and comfort. . . . If there be any disease about me for the last year there is no evidence of it." Full information about this new Treatment for Chronic Diseases will be found in our Treatise on Compound Oxygen, which is sent *free*. Drs. STARKEY & PALEN, 1109 and 1111 Girard Street, Philadelphia, Pa.

New Publications.

MUSICAL CHRISTMAS GIFTS.

Most acceptable gifts to players or singers will be the following elegantly bound books.

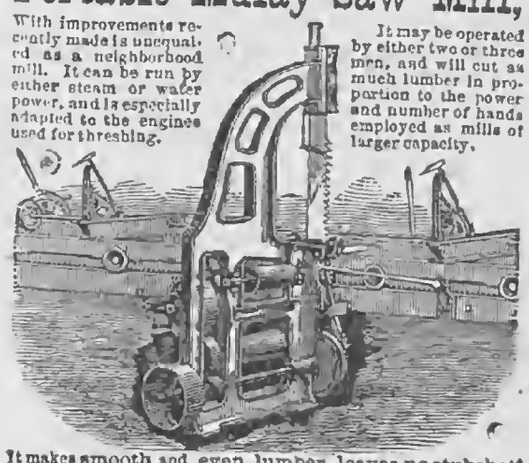
Portable Mulay Saw Mill,
With improvements recently made is unequaled as a neighborhood mill. It can be run by either steam or water power, and is especially adapted to the engines used for threshing.



It may be operated by either two or three men, and will cut as much lumber in proportion to the power and number of hands employed as mills of larger capacity.

It makes smooth and even lumber, leaves no stub shot and will cut any sized log up to four feet in diameter. It may be transported from one locality to another and re-erected ready for sawing in from two to three days, and can be made profitable in localities where there is not sufficient timber to justify the erection of a large mill. Send for descriptive circular, price, etc., to **CHANDLER & TAYLOR, Indianapolis, Ind.**

DO YOUR OWN PRINTING
Presses and outfits from $3 to $500 Over 2,000 styles of type. Catalogue and reduced price list free.

WATCH BUYERS, ATTENTION

The celebrated Borel and Courvoisier Watches were awarded the first prize in London in '62, grand prize at Paris in '67, first prize at Centennial in Philadelphia, and lastly gold medal at Paris in '78. These watches have stood the test for the past 20 years, and pronounced by best judges equal to any made. They all have Nickel Movements, Tempered and Hardened Breguet Hair Springs. Ischronised for railroad use in Key and Stem Winders, with all modern improvements in the art of watch making. Large numbers are in use on the principal railroads in the country. As a guarantee that they are what we claim for them, we refer by permission to the dealers named below who have sold them for years:

Ask your druggist or merchant for it; or write to ask what it is, what it costs, who uses it, where to get it. **WELLS, RICHARDSON & CO., Proprietors, Burlington, Vt.**
USE ONLY THIS THE FIRST AND THE BEST

Humorous.

A MAINE paper says: "The types last week made us say that 'the showers were not sufficient to meet the wants of the 'milkmen,' &c., instead of 'millmen.' "

JUDGE to an unprepossessing tramp: "What are your means of living?" "I am an inventor." "Ah, indeed. And what have you invented?" "Nothing as yet; but I am on the lookout."

A PHILADELPHIA quack informs the public that he is not exclusive: "If a patient wants it gentle and mild, I'm a homœopath; and when anybody wants thunder and lightning, I'm an allopath."

THE editor wrote "An Evening with Saturn," and it came out in the paper, "An Evening with Satan." It was mighty rough, but the foreman said it was the work of the "devil." And it looked that way.—Norwich Herald.

I SAID to my little girl one day—"what a large forehead you have. It is just like your father's, you could drive a pony carriage round it. To which her brother five years old, said, "Yes, ma, but on pa's you can see the marks of the wheels."

"WHAT is your father's occupation?" asked the teacher of a new scholar. "Mum?" "What does he do for a living?" "Oh, he bets on thur election, I guess. Marm told him last night that's all he'd done for a month."—Boston Transcript.

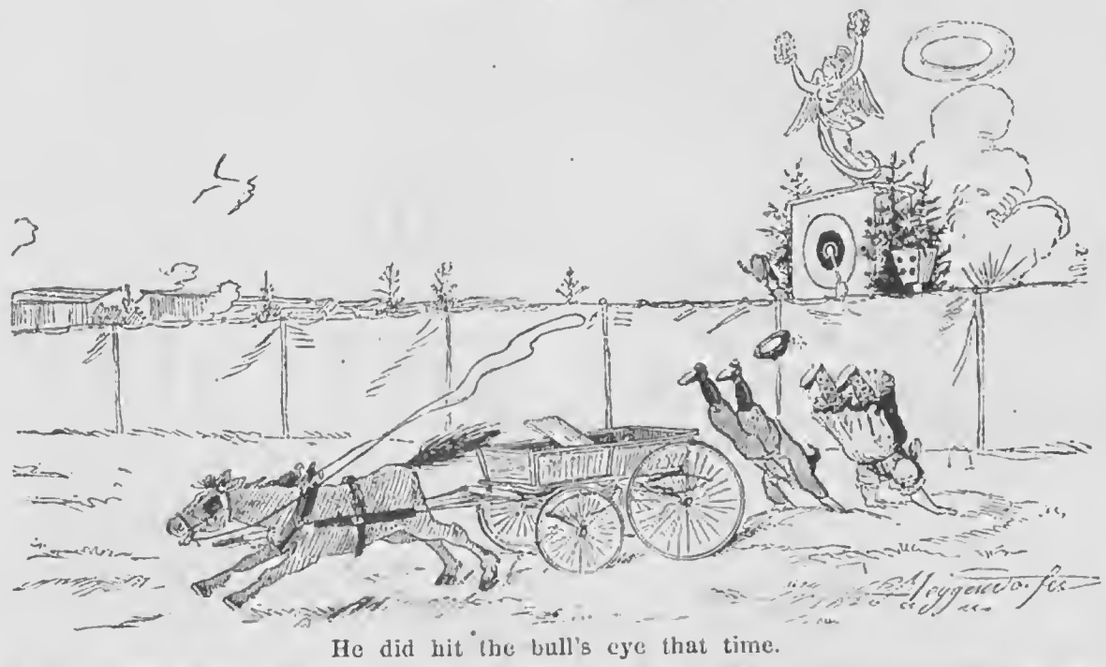
NOTHING maddens a man more than to come down to breakfast and have his wife tell him that he has been talking in his sleep, and refuse to give away what he said. Not that his conscience troubles him; oh, no! he is only after psychological facts.—Lowell Citizen.

"DO YOU love her still?" asked the Judge of a man who wanted a divorce. "Certainly I do," said he; "I love her better still than any other way, but the trouble is she will never be still." The Judge, who is a married man himself, takes the case under advisement.

EVERYBODY has heard of the jolly Dutchman who, when the steamboat was likely to sink, succeeded, after much trouble, in finding a life-preserver large enough to fit him. While he was trying his best to blow it up, a young fellow standing by said: "You can't fill that with wind, it leaks. Don't you hear it siss?" "Ish dot so?" he replied. "Vell, I dinks den, I better keep de vind in myself."

OBSERVING THE TARGET PRACTICE.

Now let's see if he will hit it!



He did hit the bull's eye that time.

Regularity Ensures Health

Of the physical structure. To restore it persons whose bowels are out of order, or whose digestion is imperfect, should use Hostetter's Stomach Bitters, a corrective of disordered conditions of the secretive, evacuative, and digestive organs without a peer. The most serious consequences result from a neglect of reformatory measures, where constipation is allowed to gain headway. For this as for many other disorders usually found in conjunction with costiveness, such as dyspepsia, biliousness, nervous derangement, headaches, vertigo, morning nausea and the like, the Bitters has long been recognized by the public and the medical profession as a genuinely efficatious remedy. Its action is never sudden and griping, like that of a violent purgative, nor does it like the average cathartic, tend to deplete the system and weaken the bowels. On the contrary, it invigorates and soothes while it regulates.

COLUMBIA BICYCLE.

Bicycle riding is an accomplishment easily acquired, and is rapidly becoming the most popular of out-door sports; as a health restorative it is invaluable, bringing into action every muscle of the body, strengthening the lungs, and invigorating the wearied brain. The practicability of the machine is generally conceded throughout the country, and the thousands of bicycles in daily use are constantly increasing in number. Send 3c. stamp for catalogue, with price list and full information. THE POPE M'F'G CO.
59 Washington Street, Boston, Mass.

THE request often made by publishers that readers will mention their journals when answering advertisements, seems to us a very reasonable one. Such mention is a helpful and friendly act to the journal mentioned and enables the advertiser to determine which journals are the best advertising mediums. Reference to our advertising columns will show there is not one advertisement of an exceptional or ambiguous character admitted. In so far as this is possible we hold ourselves responsible for their high-standing and trustworthiness.

Farm Topics.

IMPROVEMENTS OF FARMERS.

RICHARD GOODMAN.

So much is said and done for the advancement of agriculture in its inorganic aspect, and also in the improvement of the various breeds of domestic animals, that we are apt to overlook the status of the agriculturist himself through whom, willingly or unwillingly, these advances and improvements have to be made. The position of the sons of the soil in every portion of the Old World since the Roman conquest, has been so ignoble that they have hardly been accorded any rights which the other classes were bound to respect, and it was only after the settlement of this country that the actual farm laborer was able to enter upon his own land, and the higher idea of property, of exclusive right and ownership was allowed to exalt his conceptions. The early settlers, notwithstanding their severe privations and dangers, were happy in felling trees and cleaning forests to build their houses and make their farms, for they were creating homes and property which would descend to their children, and knew no other landlord than the government, whose rent, in the shape of taxes, was so light and necessary to the general welfare that it was cheerfully borne. Society was not composed here, as in the older-settled countries, of great and wealthy persons who possessed everything, and of a herd of people who possessed nothing. All were animated with the spirit of an industry unfettered and unrestrained, because each person worked for himself, and the farmers were the ruling class, as they were the most numerous and the importance of their avocation to the whole community was realized.

As the country increased in population and wealth, commerce, manufactures and the arts and professions began to come to the front, and the farmer to retire to the background. The high offices of State, the representative and Senate chambers were no longer filled from the agricultural ranks, and it seemed as if the class whose work underlaid the whole fabric of the Republic, was to be relegated to the same position their co-laborers in the Old World occupied. But, happily, that great ennobler, the common school, in conjunction with those higher seminaries called colleges, was accessible to farmers' sons, and the latter were enabled to retain some of the advantages their fathers had gained, and in this more recent period schools especially fitted for their own instruction have been chartered by the General Government in connection with every State in the Union. Farming as a business has become profitable in all its departments, and there is hope that the decadence of the farmer in his social, educational, political and monetary surroundings has ceased, and that he is again to come to the front, breast to breast with the other prominent classes upon whom the prosperity of the country depends.

After the five or six years of depression in all business interests, we have started again as a nation at an unexampled rate of speed on the road to affluence, we have resumed specie payments, our exchequer is filled with gold poured in from abroad, everybody is happy and hopeful who can and does work, and yet few perceive how much of this enhanced situation is owing to the products of the soil and the labor of the farmers—how the gold we receive from England and the Continental nations is in payment for the wheat, corn, beef and other results of the toil of the six millions of men and their families who constitute the great substratum of the Republic. Few realize the importance of the labors of these men and of the necessity of their being educated for their business so as to compete successfully with the cheap labor of the Old World, or else there would no longer be the objections continually to be fought down, even in enlightened Massachusetts and New England generally, to the maintenance of schools for their especial instruction—measures which alone in Germany, France and Europe generally have enabled those governments to possess a body of soil cultivators who can scientifically and profitably furnish food for their home consumption from their worn and impoverished soils.

The very improvements themselves in agriculture fostered, and in many cases, fathered by outside persons — with the introduction of new and valuable breeds of cattle have, in connection with agricultural journals and gatherings, greatly assisted in the growth of the farming community in intelligence, wealth, better style of living and dress, more sociability and a wider horizon of ambition. No person of ordinary character can give his attention to the more systematic and scientific modes of cultivating the soil without an increased interest in the pursuit of general knowledge connected with his calling. No owner and breeder of expensive stock but mends his ways and substitutes neatness for disorder and dirt, regularity for irregularity, and has his mind enlarged because the unwonted expenditure of capital necessarily begets the impetus to make all the surroundings suitable to a profit therefrom, and consequently the animals are treated tenderly, kept cleanly, fed properly, and thus care and attention soon extend to the whole farm.

It isn't a great many years since my herd of Jerseys were received at Tokun Farm through a chorus of jeers *en route*, and a shorter period since the success of my efforts in the State Board of Agriculture to prohibit the thirty-one county societies from bestowing premiums on grade bulls, seemed to threaten a dissolution of social farm life, and one would think from the debates on the subject at the clubs and annual meetings of these societies that a great blow had been aimed at the agricultural prosperity of the State. But the introduction of Jerseys here and elsewhere has led to much greater care in the dairy, in the farm and in the stables than theretofore known, except in special instances. Butter-making has been lifted into a science, and the use of thoroughbred bulls now generally established, has enhanced the value of our ordinary dairy and working and beef cattle from one-third to one-half more than they would otherwise have been worth.

Better than all this, the farmers themselves have grown in mental stature, realized the benefit of these and corresponding advances, and carried their families along with them; the discussions at our farmers' clubs have ceased to be like those of a camp-meeting, the venting of mere personal experiences, but deal with principles and established facts. The necessary care given to the cattle and the farm has extended in doors; the kitchen has ceased—though there are too many exceptions—to be the general drawing-room, pork is no longer king in the larder, pies have in some measure decreased, the girls' complexions have been improved with their manners and habits, and the boys have ceased, in many cases at least, to be gross in their ways and unconcerned about their calling. Scorn as we may the "almighty dollar," that reigns with no more supreme sway on this side of the Atlantic than the other, it is a great educator, and the man or woman who, by honest labor, is steadily earning a support and a little over, is not only happy and contented, but alive to investments and increase of capital and its profitable use. We may laud the parsimony and think of the French peasants who, in the moment of peril to their country, rescued her by their savings, but the very qualities which brought about this result have kept them in gross ignorance and poverty, and allowed their intelligence to be stunted and their condition to be not a whit better than that of the serfs of the Middle Ages. Much better to spend reasonably a portion of their earnings, educate therewith their children, improve their farms, make money out of money, as do our wide-awake farmers, and thus become not only intelligent cultivators but multiply the chances of their children to ascend in the social scale and stand on an equality with the best.

Our farmers have yet much to learn, but education of the proper sort is being forced upon them, and what with the facilities of book-learning at school, money making by new processes of grain culture and dairying, by exports of cattle, sheep and all grain products and other means constantly opening, it will be the coming farmer's own fault if he is not in all respects on a par with his fellows of whatever trade. Farming has ceased to be a mere monkish employment for persons secluded from their fellows, but has become one of the open and constantly improving industries, and he will succeed best in it who adds brains to his handiwork.

WINTER FARM WORK.

It is not an easy matter to arrange for profitable employment upon the farm during Winter beyond the immediate care of stock. The chief object will be to get everything out of the way, which will take up time and interfere with the active labors when Spring opens. To do this everything should be put in readiness for immediate use.

If muck is wanted or other absorbent, it is just as easy to dig it in Winter. A great part of the business of draining is also as well done while but partially freezing. If there be timber to get out; if trees have fallen which should be saved for fuel; if fencing material should be moved; if tools have to be repaired and painted; if a supply of fuel is to be gotten up; if any portion of the buildings needs repairs; if there is manure to haul, then the farmer knows at once the advantage of having these tasks forwarded.

In some instances swamps may be drained as readily in Winter, and if a sand bank be at hand, the clayey soils may receive a coating. If there is no ice-house there should be one made and filled. But to search for new or outside employments upon the farm during the Winter months, and of a character that the farmer may be supposed to be conversant with the pursuit, is quite another thing.

In earlier times the farmer got up and prepared a huge wood pile. He sawed, split and shaved shingles. He prepared a considerable quantity of flax fiber, and the wife spun and wove it. He made his boots and shoes. He pared and dried apples and pumpkins. He made apple sauce. But nearly all of these employments are gone.

If there be cows and a supply of foods for dairy purposes, the most profitable season for butter and milk is in the Winter; also if he have food and can obtain sheep for fattening them, there is profit in so doing. The Winter should be the time of care of stock and marketing of crops already secured, and of recreation and recuperation, and repreparation for the active times of Spring and Summer.

The farm is but a factory for producing a certain kind and quantity of produce, and the calculation, and the preparation of tools, and the procuring of fertilizers are largely Winter labor.

APPLES FOR STOCK.

I notice that there is considerable discussion as to the value of apples for feeding stock; some writers claiming that they are of considerable value, others that they are of very little. This subject is evidently not sufficiently understood. When farmers are willing to draw apples several miles, and sell them at prices ranging from five, to twenty cents per bushel, for cider or evaporating, as they have done this season, they evidently consider them of no more value for feeding. Why should we not trust to "common sense" upon this subject, and be governed by the instincts of our stock?

Our animals eat apples greedily when they have the opportunity and is not this good evidence that apples are valuable for feeding? The appetites of our cows, horses, and hogs have not become vitiated by the use of tobacco, whisky, or highly spiced food, consequently their tastes are to be relied upon to a considerable extent.

My opinion is that apples are worth, at least twenty five cents per bushel for feeding, either, to cows, hogs or horses. Feed lightly at first, as should always be done when changing feed, and increase the quantity until you feed as much as will be eaten freely but still leaving the animal with a good relish for the next meal.

I think that our best authorities are agreed that apples are valuable food for mankind, and it is only when our stock are under consideration that the "doctors disagree."

Why this difference? A celebrated English doctor says: "Apples, our most common fruit, are good food raw, baked, stewed or in a tart, or pudding. Of course, a large portion of an apple, as of all fruits, is water, but the nutritive portion is very pure, and has the best effect upon digestion." Does any one doubt the correctness of the above statements? If not, why doubt the apple being just as valuable, as food for stock? An occasional farmer has discovered that apples are valuable for feeding purposes. One of the largest dairymen in an adjoining county feeds them by the hundreds of bushels, having large orchards and also buying largely of his less well informed neighbors. Another has just set an orchard mostly of Tallman Sweet, for no other purpose than to raise apples for stock feeding. Plenty of such instances could be given, but are probably needless. When people generally understand this subject, apples will be a more profitable crop than at present.

It is of little consequence for feeding whether apples are sweet or sour, but the best varieties for mankind, are also the best for stock, while an apple of too poor a quality to be eaten should not be grown for feeding. Suppose an apple to be mostly water, our stock need water, and can it not be given them as advantageously with their food as in any other way, especially in cold weather? NELSON RITTER.

Onondaga Co., N. Y.

Ensilage.

The question of green food in Winter, or a preservation of food in a more natural state is one in which the farming industry is soon to have great interest.

The health of humanity is much enhanced by the preservation of green, juicy, succulent foods, and there is no question but the condition of all animals would be improved by a preservation or production of a natural condition of food for them so far as possible.

The announcement that vegetables, fruits and meats may be preserved in a preparation of water for almost any length of time suggests the feasibility of the erection of tanks sufficient to cover cart-loads of apples and other green things kept at a temperature above freezing and the withdrawal and use as wanted.

The preservation of beet tops in France is made practicable, and a few experiments in such preservation in this country show favorable results.

The question then arises how to increase the supply of fodder plants and roots and fruits and vegetables at the same time, and which shall be of a character to be thus preserved, and also to complete the experiments with the systems of preservation.

Few things but keep better in cellars or shut out from the air, and many articles keep better in moist cellars or in water. Every good farmer knows the benefit of an underground

cellar for freshness for vegetables, while in many articles, like celery, beets, cabbages, turnips, and the like, if they are set in the ground late in the Fall and wholly covered, top and sides, below frost, both tops and roots are preserved fresh.

Were the fodder crops cut before ripening and carefully cured, a part of the suggestion of more succulent food would be realized and the addition of supplies of roots for feeding with hay and grain would do a great deal more, if it were generally practiced. C. B. C.

Horticultural.

RURALISMS.

THE RURAL lately gave a portrait of the Jefferson Grape, and a fair representative bunch. I have for years been through Mr. Ricketts's grapes, each year taking notes, and I claim to know something about them. As he has sent them out from time to time during the past four or five years, on looking at my notes, I have been compelled to say each time, "Well, Ricketts seems to be keeping his best till the last," and I have said it loud enough to be heard by hundreds. It is so with the Jefferson, which, with the exception of the exotic seedling Welcome, is thus far the best grape Mr. R. has parted with, and of excellent quality it is. It is not, however, his best grape, as the public will some day have the pleasure of knowing. The Jefferson is so good that I hope it may find a congenial home in all parts of the country. If the really good grapes we already have would only meet this requirement, we might be content for a while. I see there is likely to be considerable disappointment unless it be distinctly remembered that the Bacchus is not a table, but a wine grape, and it promises to be one of the best for this purpose.

There are probably few of the readers of the RURAL who have any adequate idea of the magnitude of some branches of the flower trade in the city of New York. Take, for example, the Lily of the Valley, the roots of which are all imported. I had an opportunity lately of examining some statistics carefully collected by Mr. Peter Henderson for his new "Hand Book of Plants;" and it appears from these that a *million* of roots of the Lily of the Valley are forced in Winter in the city of New York alone, for which $50,000 are paid by those who make up the flowers. This business of forcing has reached such a state of perfection, that, by the aid of a refrigerator, flowers of the Lily of the Valley are now to be had every month in the year. If the reader will bear in mind that these Lilies are forced on a corresponding scale in every large city in the Union, he will get some idea of what is annually spent for this one flower alone.

Take another example. It is only a very few years since the white Roman Hyacinth began to be forced for the use of the florist, or, in fact, was known here at all; and yet already over 400,000 bulbs are sold in the city of New York for forcing, and the number is rapidly increasing every year. The bulbs are sold in quantity at four cents each. The white Roman Hyacinth is forced very much in the way that the Lily of the Valley is. Add to these two the roses, carnations, violets, etc., that are grown in corresponding quantities in all the principal cities in the country, and one feels his breath beginning to go.

Of all the small shrubs I have grown, I know of none more beautiful in Winter than Spiræa Thunbergii. Its real beauty is not fully developed, however, till the plant is at least three years old. The spray is small and delicate, and prettily recurved. The leaves are about an inch long, and very narrow and willow-like. The plant is quite dwarf, and rather solidly furnished, except it be thinned out. It is not a plant for the barbarous practice of heading in. Up to the present time, (Nov. 27,) with the ground frozen as hard as a rock, and covered with four inches of snow, the plant does not seem to have lost a single leaf. It is a mass of rich purple and green, reminding me of some of the Japan Maples. To my mind, it is now a much more beautiful object than when covered with its tiny white flowers very early in the Spring. It would seem to be almost evergreen. When you make out your promised list of shrubs, Mr. Editor, please add this to it. It is one of those modest things very likely to be overlooked.

HORTICOLA.

Australian Botanical and Experiment gardens are quite taking the lead in some things. They have 78 varieties of sugar-cane undergoing test, and it is believed that the new sub-tropical nation will, by and by, be a sugar-producing country. Twenty varieties of rice are under cultivation also to test the practicability of growing that cereal. In Northern Queensland horticulturists have 8,000 coffee plants which promise well, and are also planting the cocoa tree.

CHARLES DOWNING tells us in reply to an inquiry that he deems the Caroline Raspberry a very promising variety and worthy of cultivation. The Caroline has not yet fruited at the Rural Grounds—hence the RURAL has no decided opinion to express.

Entomological.

REMEDY FOR CABBAGE WORMS, Etc.

In reading the RURAL and a couple of Western agricultural papers, I notice that the cabbage worm has been plentiful and busy during the past season in nearly all parts of the country, and of the many remedies advertised for the pest, I have tried several with slight success; yet I have hit upon one thing which has proved an effectual safeguard. I had a large patch of more than a thousand plants, many of which were completely riddled, nothing but a skeleton being left when they began to head, but one thorough application of unleached dry wood ashes at once killed every worm it touched and stopped the ravages entirely for several weeks, every plant taking a new and vigorous start. Later on, seeing millers flying about thickly, I made a second application over a part of the plants, and as a result obtained as fine a lot of large heads as I ever saw when no enemy was near. No further attention was required except ordinary tillage, though before I used the ashes I was about to abandon the patch as worthless. According to the size of the plants, from half to a whole shovelful of the ashes was thrown on top of each cabbage, the only care being to cover it well. If cabbage raisers who read the RURAL will employ this remedy next season, they will be certain of a fine crop in spite of any number of cabbage worms. So far from the ashes having had an unfavorable effect on the growth of the plants, these grew more vigorously than ever after the application; every plant seemed to receive new life and health therefrom. This remedy has proven so thoroughly effectual in my case that I wish to impress its importance as strongly as possible upon all cultivators of the cabbage for use next year, satisfied that it will prove thoroughly satisfactory in their case also.

Of the Yellow Ovoid Mangel from the RURAL's free seed distribution, I have a very fine crop, the roots ranging from five to ten pounds each. They are very excellent for table use during the season, and I think they might be fully equal to or ahead of the mangel-wurzel for feeding stock, being fuller of saccharine matter.

The Apiarian.

BEES IN WINTER.

THE problem of successfully wintering bees is one that has perplexed, more or less, our best apiarians, and it does not yet seem to have been satisfactorily solved. Three methods have been advocated with regard to the location of the hives in Winter first, on the summer stands, second, in cellars, and third which is essentially the same as the second, that of burying. The common opinion, we believe, is that bees can be wintered as well out of doors as anywhere provided the necessary precautions are taken.

(1.) Bees should be provided with a sufficient amount of food for the winter. Prof Cook says that to winter safely demands that the bees have 30 pounds by weight, not guess, of good capped honey, though coffee A sugar is just as good. A syrup made of two parts by measure of A sugar, and one of water, fed warm in the cap each evening will be carried down very rapidly. Sticks of plain white candy thrust down between the combs among the bees, before their honey is quite exhausted, will greatly lengthen out their stores. But bees have been known to die even when there was honey in the outer combs. It is well known that with the approach of cold weather, bees recede from the outer combs and gather into a compact mass in the center of the hive, so as to husband their animal heat, but as these central combs are not generally well supplied with honey eing rather for ising the brood, the bees soon exhaust the supply within reach, and die rather than move *en masse* to the combs which they have before deserted.

(2.) Extremes of heat and cold must be avoided. If the temperature of the hive becomes too high, as may be the case when within doors, the bees become restless, eat too much, and if confined to their hives, are distended with their fæces, become diseased and die. Hence the necessity of allowing the bees to have a purifying flight, when the hives are out of doors, when the weather will permit it.

Too low a temperature is likewise detrimental. To keep up animal heat they must consume more food, are uneasy, exhale much moisture, which may settle and freeze on the outer combs, preventing them from getting at the needed food, even if they were so inclined. It is also liable to produce fungus growths.

(3) Particular care must be taken, when hives are out of doors in the winter, to protect them from piercing winds which so powerfully tend to exhaust their animal heat. One authority says that bees, if sheltered from the wind, will endure a temperature low enough to freeze mercury without suffering as much as by exposure to a powerful and long continued current of air, some 40 or 50 degrees warmer. This may be an extreme statement but there is doubtless much truth in it. It is desirable that the temperature should be kept between 35° and 50° Fahrenheit through the entire winter, which may be done by boxing up the hives with straw or chaff, leaving the entrance open for exit.

If bees are kept in cellars they should be moved thither before cold weather and should remain until April or May, though, if there are any warm days in the winter, they may be taken out of the cellar and permitted to fly about. Towards night return to the cellar.

If bees be buried for the winter, it should be done in sandy and well drained soil. Hives should be placed beneath the surface of the soil, then a mound formed above them to afford sufficient protection. Five colonies treated thus in 1877-8 lost all together less than one-half gill of bees.

Scientific and Useful.

A NEW THEORY.

THE growth of plants is accelerated by heat, and retarded by cold, a fact which sugggests the question: in what manner does this affect the tissues, and how is active growth at one time, and either a temporary suspension of growth or the death of the plant at another, produced by extremes of temperature?

Sap is elaborated during the growing season very rapidly and copiously, the increasing heat of the season expands the tissues, making constantly more room for its ready flow through the whole plant. As the extreme heat of Summer comes on, the tissues begin to dry up, to harden; their expansion is sensibly checked; the sap also becomes thicker, less in volume, more sluggish, and as the cool nights of Autumn chill the fibers, and the heat of the day checks their expansion both laterally and longitudinally, the sap channels become hardened, shrink, and prevent the sap from rising; in common parlance, the plant ripens in every part, but more especially in those parts most exposed to the changing temperature of the season.

As the cold of Winter encroaches, the sap is compelled by the obstructions to its upward progress, to descend to the roots which, being below the surface and protected from heat and cold by the soil, offer the only refuge. This evidently causes the first-formed fibrous roots to decay and disappear leaving only the surface roots to increase in size and to put on a bark similar to that of the trunk, able to resist both heat and cold. The effect of cold causes the newly made roots to descend till below the reach of that degree of cold which is death to them. This process has the effect of ripening the whole structure of the plant from root to fruit, except those root fibers which are powerfully stimulated to resist the approach of their deadly enemy, and burrow in the deeper soil to escape him.

The difficulty which novices have in successfully growing house plants, lies in an attempt to thwart the season's natural effect upon their pets; the rooms are kept too hot as Winter approaches; the plant does not ripen, and one night of sharp cold kills outright the plant made delicate by improper treatment at the most critical time of its life. Growth of a plant may, in houses made for the purpose, be continued without any ripening of its tissues, but the plant becomes over-grown, long-jointed, long-legged, with a few leaves at the tips of the branches, and none below, as many no doubt have noticed in the common Fish Geranium, a plant very seldom nicely grown except by very careful and experienced gardeners.

A close observation is necessary to learn the temperature at which each plant "ripens off;" a season of rest must follow that period, and a gentle but regular growth be induced till that period arrives again. To those who love plants, and to grow them handsomely, I recommend their close attention to the habits of each plant. These are as varied as the plants themselves. Soil is not of half so much importance as sensible management. One of our foremost and most successful gardeners has discarded entirely the 29 different kinds of soil recommended by one seedsman, and for years past has used but one soil, but he adopts a management of each variety of plant exactly suited to its natural habits and demands. It is asserted that if the earth were at once relieved of its present extremes of heat and cold, and a temperature of, say, 75° established, one month's time would suffice to smother all animal life with the exuberance of the fungus growth which would take place.

The Garden.

THE FARM GARDEN.

PROBABLY no recollection of the farm is more interesting to the boy, grown to be a man in the busy scenes of the city, than that of the garden of his childhood. And if any picture of Eden ever comes up to his mind, it is that beautiful spot. When rightly cared for nothing is pleasanter, nothing of more interest or beauty, and no portion of the farm of more profit.

This, too, is the part of the out-door work in which the children, the boys and girls and the mother may take chief interest. There is no healthier, pleasanter occupation for women than gardening, and nothing more tends to develop that beautiful love of nature in the mind of the boy or girl than the employment in and the association with the garden as it may be, and should be, upon every farm in the land: both useful for fruits and vegetables, and ornamental for flowers and taste in design.

If one rides in the country of a Summer day, he cannot help feeling impressed with the beauty of the few blooming rose bushes, and the sweetness of the few flowers on the border of the garden, or in a plat by the front door; nor can he help an expression of regret, and a feeling of dreariness where no such examples of taste and thrift are found.

If you would drive the children from the farm, instilling into their natures a dislike and distaste for rural scenes, see to it that there be no flowers to shed their fragrance nor enliven the scene; that there be no pleasant, shady nook, or rural retreat, no taste in green, or arbor, or fountain, to arrest the fancy or the eye. But to the boy or girl reared amid the beauties of nature's scenes, and with a home rendered attractive by fruits, and flowers trellises, walks, and arbors, and an abundance of the good things which may be grown in every garden, no matter how far away his steps may wander, there will be a tender thought for the homestead and a tear of regret that his childhood did not always last, or that his life were not still in the midst of such scenes.

The purpose of the garden should be threefold, to supply the most wholesome portion of the farmer's diet, to afford beauty and attractiveness to the eye, and to cultivate taste in the household, and to afford a plot of ground for the practice of the children in caring for flowers and vegetables and as an incitement to the knowledge thus gained.

All these may be in one and the same locality, or in two or three different places, as preferred. Some place near the dwelling is preferable for the family flower bed, and also for the childrens' garden. The vegetable garden may be by itself further removed, may be large or small, cultivated as a garden, or most of the garden crops may be grown in the field.

The orchard may be to the north and west of the garden for shelter and protection to it, and the vineyard and small fruit garden may be a part of the plot selected. But there should be no mixing nor mingling of fruit trees and vines, nor of small fruits and vegetables, nor vegetables and flowers. Let each have its own allotted space, and let the tallest plants, trees, or shrubs, be on the north and west, and gradually grade down in diminishing hight until the vegetable garden is reached, which should be on the east and south side, with the fullest exposure to sun and warmth. The greater proportion of things grown in gardens are semi-tropical and need abundance of sunshine and moisture.

The garden plot should also be selected with reference to good soil, and good drainage; the soil should be deep, cultivated deep, and thoroughly enriched, and of a just medium of soil and sand, clay and loam, to enable the earth to remain light and mellow, and to hold fertilizing elements. If the soil is not thus constituted, it should be made so by the mixing of clay or sand as required, and all stone should be carefully removed. All this extra labor is required and rendered necessary from the fact that the same spot is expected to remain for a long time in use as a garden, and, because also, many kinds of seeds are very small, and their shoots tender and require a very soft, pliable and mellow soil to allow them to germinate and grow freely.

In the soil where fruit trees, or shrubs an perennial plants are to be set, as well as asparagus, rhubarb and rose bushes, the

soil should be loosened up to a great depth and not only thoroughly enriched but if charcoal, old bones, scraps of leather, chip dirt, or a quantity of coarse sand are placed six inches or a foot below the top or mixed with it, it will tend to keep the soil loose and prevent drought or the drowning out by too much rain, and also enables the roots to obtain an easier circulation. Lightness of soil and a capability of receiving air and moisture are almost as good as fertilizers. S. S. B.

Miscellaneous.

TELL KNOWLEDGE, NOT GUESSES.

GEN. WM. H. NOBLE, BRIDGEPORT, CONN.

Nobody has a right to put forward, in such a journal as the Rural, his whims and guesses. We don't want even thought-out opinions, unless backed up by facts and logic. Most men like to see themselves in print, however crudely and thoughtlessly they write. When the average man spreads himself on the wants and ways, the goods and ills of rural life, we get about as many notions as Mark Twain had from his friends to cure a cold. Some offered cures might help, but a good many would be sure to kill.

The world is old in all the happenings of rural life, yet every little while somebody pops up with a small fact, tagged to a very big but lame conclusion. A man with a fever, drenched in a storm or ducked in a stream, gets well; right-away. This water-cure is set down as sovereign for fevers. Somebody kills the coccus or bark louse on his fruit trees with linseed oil; out comes linseed oil as a cure-all for these pests. So through all that happens in the orchard or on the farm. No one has any right to declare what follows an event, is its logical result. Cause and effect want a good deal closer studying and linking before you ask our faith. The seeming cure may turn out only "a delusion and a snare."

I am a little akin to the sanguine man of whom Col. Ingersoll says: "Show him an egg and right off he sees the air full of feathers." I am so glad to get hold of an insector coccus-killer, that I try it at once. I went for that linseed oil and the coccus, and in the end I think "cussed" the remedy. All I have to say, is, plously, if you want to kill the coccus and your trees, too, paint them, as I did, from top to toe with linseed oil.

Now, what started me out in this foray, after braggart whim-whams and cures, was the self-complacent talk of some one about the woodpeckers which girt, with eyelet-hole platoons, our pear and apple tree trunks and limbs. It was in some rural journal, perhaps the Rural [No, it was not the Rural.—Eds.] that he called the little fellows "sap-suckers," and said, "shoot the rascals." Just which little hammer-head does this business I know not; but it was some branch of the family which he has thus doomed without judge or jury, while he left the rest of the breed with a good name, scot-free. This sentence of outlawry was backed up by the claim that the little hammer-heads made holes either out of pure "cussedness," or to suck the tree sap, which fancied doing got them a bad name.

Now, I don't think, of themselves, that those eyelet-hole bark wound sdothe tree any good; as little do I believe the little fellows plant those platoons around the trunk, either in wantonness or to suck the sap. It's a poor help to wisdom in the orchard to charge a wanton and even a food-sucking act without close scanning of their doings. There may be other sap-heads around, that neither see nor do half as brightly as our lively, gray-plumaged, wintry friends. The woodpecker knows too much to waste his time sucking sap when there is none, or to make those holes just for the fun or the wrong of the thing.

In the first place, no sap flows in the season when the little fellows dig these tiny wells; if there did the sucking of sap would do no harm. The Irishman, seeing their red caps, thought the little fools were hammering their heads all "bluggy" just for fun. Is the man much wiser who deems the industrious rat-tat-too, and busy hammering sheer wantonness?

The woodpeckers are no fools. They know what they are about. The whole tribe are our best helpers in the orchard, rapping for hollow spots to pick out the worms within, sticking their bills under loose bark, to lance with barbed tongue the insect crawler or crysalis. Rat-tat goes the bill into the rotten wood; down the splinters fly; out comes the worm that feasts on and makes decay. Through the currant bushes the little bird flits, and hearkens to the borer's gnaw. Rap goes his little trip-hammer and out comes the tunneling grub. He hunts all over. I saw one the other day getting a meal on a lilac, out of the enemies of its blossoms.

Now, if anybody has studied up this sap-sucker's work, his motive in hammering out these tiny holes, let him tell us, and shame my ignorance. I suppose they are made in digging after insects, but I do not claim to know. But let nobody tell about this what he *thinks*, but only what he has studied and *knows*. If this sap-sucker, like the heathen Chinee, is up to "ways that are dark," and "tricks that are vain and peculiar," lets hoot and shoot him out of the orchard. But first let us kill off the budcating English sparrow.

NEW AGRICULTURAL COLONIES.

The time is fast passing away in the United States when land of a character and in locations desirable may be had for the purpose of planting model communities, as Mr. Hughes and his associates are doing in East Tennessee. In this instance, also, the undertaking is on a scale in which only capitalists can engage. It requires money, and no small amount either. To take up several thousand acres in Texas or Dakota or in other Territories is not, however, a difficult matter, but to carry the authority with it of social regulation, and, added to that, a company coming together with a few hundred dollars each, willing to rough it until their settlement grows, cannot always be depended upon for good order and sobriety.

Character, habits, education and religious belief are not always compatible, even if there would be much of either of these.

In America, too, few persons are willing to be second in any colony or settlement, as by far the larger number in Mr. Hughes's New Rugby Settlement must always be. The highest places must be open to competition, and there must be individual independence.

Tennessee may charter this experiment of establishing a young aristocracy, in which one part of the society are "gentlemen" and the other "coachmen" and "gardeners," but should the latter two branches become most numerous, they might some fine day vote the "gentlemen" out of office.

There is nothing less than the State organization practicable in America, boroughs and shires and model utopias or cantons and duchies cannot now be made to take the place of universal society and good order. The State organization is also increasing in dimensions and threatening to become of national dimensions of industrial good order and good citizenship.

This English settlement of Rugby is, however, doing a good work in directing attention southward, where the best climatic opportunities are now presented for new settlements, and causing a nation-wide inquiry, besides suggesting to the people of the States of Virginia, Tennessee and Kentucky that it will be a very easy thing to invite a well-to-do, intelligent, industrial population, as well as much capital to their midst, by a little judicious making known of the advantages awaiting. Advantages, too, which may be augmented to an almost unlimited extent, for no part of the world has greater natural resources or a more delightful climate. C. B. C.

WANTED, A FIRE-PROOF FRUIT EVAPORATOR.

In this vicinity a new interest was developed this Fall in the direction of drying fruit, apples in particular. Three of Williams's patent evaporators were erected in this county, two at Pen Yan and one at Starkey. The one at Starkey and one of those at Pen Yan ran but a few weeks before they caught fire and were burned. The other has done a fine business, but at what profit, I do not know. At any rate the owners paid out a good deal of money for fruit that would otherwise have gone to waste. There is a job for some inventor to devise some arrangement that is not quite so sure as this to burn up, or down. It must be made of something besides pine boards. The business is not going to be abandoned on account of the combustibility of these machines; for some genius will overcome that. The trade will demand the evaporated fruit for a good many reasons, among which not the least is its economy in use. If properly evaporated in the first place, and properly handled by the cook, it is as good as fresh fruit, without any of the liability to decay, while it takes much less room to keep it.

By-and-by will grow up the necessity of grading the evaporated fruit according to varieties, for there is as much difference in the qualities of apples after drying as before, for no apple that is not good to cook fresh will be improved in the least for that purpose by drying. There are a few varieties of Fall apples that it would be well to cultivate for early drying. Among the very best, I think, is Clyde Beauty. It is a good grower, an abundant bearer, and of the very best quality for cooking, either fresh or dried, and it is just perfection dried. I throw out these hints that those interested may profit thereby.

Yates Co., N. Y. W. H. Olin.

RURAL BRIEFLETS.

In a late number of this journal we made bold to allude to the illiberal spirit which many members of the agricultural press display towards one another. In the current number of his Experiment Record, Mr. Conrad Wilson thus remarks upon our allusions:

"The Rural New Yorker justly criticises the weak, unwise and timid policy of some editors, as shown by their declining to insert the advertisements of rival papers. There are a few journals that carry this principle so far as to refrain entirely from noticing, alluding to, or even mentioning the name of any paper of the same class that succeeds in making itself popular, or that is supposed for any reason to be a dangerous rival. This seems to us a great mistake, as it appears to imply not not only a lack of courtesy, but equally a lack of self-confidence and courage." . . . . .

We had supposed that our agricultural contemporaries would have referred to our immense yields of corn as a mere matter of agricultural interest, produced as they were at a comparatively small cost. The weekly and daily newspapers and several of the magazines spoke of it freely. But we have yet to see any mention of it in purely agricultural journals. Touching this phase of the illiberal feeling displayed by agricultural editors, in general, towards each other, we quote the following (Vermont Watchman) from the pen of Dr. T. H. Hoskins:

Big Crops of Corn.—There are not many things more contemptible than the petty jealousy that exists amongst editors. Amongst political editors the way in which they "run" politics, and the chasm that exists between the political ideas of most of them and anything approaching genuine patriotism or statesmanship, demonstrates the urgent need of the proposed "school of journalism." But that in the liberal profession of agriculture and its journalism a mean and petty jealousy should prevent the acknowledgment and praise of merit, is simply disgusting. The reason, is, perhaps, that most of the conductors of agricultural papers are not farmers, and have no real part in or sympathy with the soul-enlarging pursuit of agriculture." . . . . . .

Dr. Hoskins goes on to state:

The editor of the Rural New Yorker is a farmer and horticulturist. We have seen his farm, walked about it with him and talked with him, and know that he understands the practical side of his business better than most farmers. He has the past season demonstrated this in various ways, but especially by accomplishing the feat of raising, upon different fields, crops of 261 bushel baskets of "Blount's Dent" and of nearly 300 bushel baskets of "Chester County Mammoth" ears of corn to the acre. We have yet to see this noticed in any other agricultural paper on our exchange list. . . . . .

The Niagara Grape.—On looking over the Rural of Nov. 6, I notice this remark about the Niagara Grape, "The quality is no better than the Concord." Now, I have not seen the "Niagara," but I wish to say that if it is *as good* as the Concord, the owners of it may congratulate themselves for having the next best grape there is in the country, for there is none so popular as the Concord in the New York market. C. W. Idell.

333 Washington St., N. Y.

Keeping Grapes—In a late Rural is an inquiry "How to Keep Grapes?" An easy and cheap way is to dip the stems of each bunch into melted, not hot, beeswax, and then wrap each bunch carefully up in cotton and lay away in drawers in a cool, but not cold, room. Care must be taken that the grapes are in perfect condition. Mrs. M. V. A.

Almost the only demand in our large city markets is for new butter. New butter in January and February as well as in June and September, and so far as the dairymen of the country cater to this want, they seem to be successful. Probably twice as much creamery or imitation creamery butter is now sold during Winter as of all other sorts put together, and it brings the highest price because of its fresh flavor.

Mending Cracks in Stoves.

The following recipe for mending cracks in stoves costs nothing and is one that I can vouch for: Equal parts of ashes and salt made into a paste by adding water. Fill in the cracks and it will soon get hard, and you will find your stove as good as new. R. B.

Now let the Rural New-Yorker go ahead in its noble work, and let other journals and other farmers everywhere take the hint, not only for corn and wheat, but for all food staples, and let them take up everywhere the universal refrain, *more food from an acre, and less cost for production*.—[Conrad Wilson in the Business Farmer and Experiment Record for November.

WHAT OTHERS SAY.

Mr. Mechi, of England says, in the Mark Lane Express, that those who have witnessed his wheat crops during the last thirty years must be convinced that on the poorest soils, such as his, great wheat crops can be profitably grown, under the needful conditions, one of them being selected seed; and this he obtains in all his cereal crops by a powerful blower, which, being used after the ordinary dressing machine, leaves only the heaviest and most perfect kernels. After doing this, one is surprised by the large number of imperfect corns that have been blown out. He has grown his largest crops of wheat, over seven quarters per acre, on several occasions on those portions of the field sown, or rather dibbled, with one peck per acre, one kernel in each dibble hole. Wheat crops require a very highly fertilized soil, for, owing to its root formation, Liebig tells us, that in order to produce one full wheat crop, there must be within reach of the roots, the manure elements of 100 wheat crops.

Again he says, quoting Liebig, although the land is not sufficiently rich, or manured to produce a full wheat crop, many rye crops can be grown, and when these fail, oats, which possess a greater number of roots and more exhaustive power, can still succeed after the rye fails. If, then, we are to grow large crops of wheat (and none but large crops can compete with foreign supplies and prices) it must be by enriching our poor lands, by means of a more abundant supply of manure. Land can never be too rich for wheat, provided we do not over seed.

The Plymouth Rock is gaining a reputation in England. A writer in the Agricultural Gazette says: "I hear that Plymouth Rocks are the fowls which either do not moult in November, or which moult and lay at the same time. If so, then we have the coming bird before us, and we shall all hear more of the breed."

THE COTTAGER AND HIS LANDLORD.

A peasant to his lord paid yearly court,
Presenting pippins of so rich a sort
That he, displeased to have a part alone,
Removed the tree, that all might be his own.
The tree, too old to travel, though before
So fruitful, withered, and would yield no more.
The squire, perceiving all his labor void,
Cursed his own pains, so foolishly employed,
And "Oh," he cried, "that I had lived content
With tribute small indeed, but kindly meant!
My avarice has expensive proved to me,
And cost me both my pippins and my tree."
—Vermont Watchman.

A Splendid Early Pear.—Petite Margnerite, says W. C. Barry in the Cultivator and Country Gentleman, is one of Mr. Andre Leroy's seedlings, and it was held in such high esteem by that celebrated French pomologist that he named it after the youngest of his granddaughters. In the year 1863 it was first offered in France, and in this country, it has been on trial several years, but not until recently have its merits been recognized, and its propagation and dissemination seriously undertaken. This shows how much time is required to determine the value and to raise a stock of a new fruit. It is of medium size, just large enough to be acceptable as a dessert fruit; skin green, covered with grey and brown dots, and sometimes bronzed on the side exposed to the sun; flesh greenish white, fine, melting, juicy, acidulous, with a pleasant perfume. Ripening, as it does, about ten days before the Bartlett, it possesses a particular value as an early pear. As a fruit of the very first quality it can be highly recommended to connoisseurs for the table, but it is not large and showy enough for market. Mr. Leroy, in his Pomological Dictionary, describes it as the best pear ripening in August. Mr. Barry believes this statement to be as true in America as it is in France.

Acorns for Animals.—In Saxony and some other parts of Germany, according to the London Ag. Gazette, considerable store is set on oak "mast" as a winter food for sheep, and where other food falls short the acorn crop is looked forward to with no small degree of anxiety. In the New Forest in Hampshire, in Middlesex and in Hertfordshire, large quantities of "mast" are now being gathered in. In the former county whole herds of pigs are turned loose to forage for themselves at this season of the year, and receive but little of any other kind of food. Although tolerant of acorns far above that of beasts and sheep, the practice of allowing pigs an unlimited amount of unprepared "mast" is not to be commended. If given in large quantities for long periods swine become surfeited, and altogether indifferent to them, while at the same time they lose rather than gain flesh, and where pushed too far the system becomes disordered, the lymphatic glands enlarge, and the balance of health is upset. Moreover, used in excess, the meat is rendered hard, stringy, and lumpy, and loses its brightness, succulence, and flavor.

Volney Lacy, of Livingston County, Mr. Green says in the N. Y. Tribune, has 300 acres of good land, and has a reputation for keeping fine cattle. "What benefit do you derive from keeping your stock stabled in the Summer?" asked Mr. Green. "I am at no expense for fences except on the borders. I nearly double the capacity of my farm for producing grain, as I make about twice the ordinary amount of manure, and leave no large range of pasturage in the main idle, or, what is worse, a nursery for the most annoying weeds." "What

is the best method of saving manure from the cattle?" Mr. Green asked. "I permit it to lie in the stable for a few days, the more objectionable part thrown back, so the cattle have a clean bed, permitting the litter to gather to considerable depth. By this method, the floors being cemented, the liquid is absorbed. My ideal method, however, is to let the stock run loose in moderate-sized inclosures, keep them well bedded with straw, and permit the manure to remain for several weeks. The treading of the stock is advantageous. More liquid is saved by this method than by any other."

Everywhere.

RURAL SPECIAL REPORTS.

N. Y., North Lawrence, St. Lawrence Co., Dec. 2.—Last year and this, I received seeds from the RURAL office, and now I am going to report to you how I have succeeded with them. Last year I had Blount's corn which I planted in drills as I usually plant sweet corn. It grew very tall and full of leaves from the ground up, but had not tasseled when we had a severe frost early in August, which blanched the leaves; after awhile it grew again and bore some nubbins, which did not have time to get half grown; last year was an unusually cold season here for corn. I think the seasons are too short here to grow Blount's corn. My Beauty of Hebron potato yielded seed enough last year to produce over a bushel of potatoes this year. The Golden Ovoid Mangels did not grow very large, but I did not sow all my seed and intend to try them again. The little bag of Mold's ennobled oats, produced five pounds besides what the sparrows destroyed. But few of the Telephone peas grew, I saved them all, and have seven ounces for seed. They are very nice, no weevil-eaten ones among them. The cow peas produced a great amount of vine and ripened some seed. I received two Cuthbert raspberry plants late in the Fall of 1879, but they did not survive the winter. I am very glad to have a chance to get the Cuthbert again. I will send stamp to Mr. Lovett at once.

ANNA H. N.

ILL., Baileyville, Ogle Co., Dec. 8.—The year now closing has been one of general prosperity to the people in this locality, though some have succeeded better than others. The weather has been capricious and noted for its many changes, often causing our "oldest inhabitants" to exclaim, "I never saw such weather before!" Crops have varied greatly, both in yield and quality, but there have been no entire failures, and there is much to be thankful for. Many valuable lessons have been learned in the "school of experience" during the past year which should be remembered and heeded. The light of the past brightens the present and illuminates the future; hence all can now see more clearly their way in the march of improvement and progress than those who lived in the past. Last winter was mild and wet, with but little snow, and there were frequent spells of alternate freezing and thawing, especially in March, which killed a large portion of the Winter wheat in Northern Illinois, Wisconsin and Iowa. Many fields were plowed up in the Spring and the ground seeded to other crops, but some escaped and produced from ten to thirty bushels per acre. Wheat that was drilled in on rolling or well drained land, and where the seed bed was properly prepared, did better than what was sown broadcast—a lesson worth remembering. It has also been found that certain varieties of wheat are hardier than others, and the farmers this Fall have been careful to sow those varieties that appear to have become acclimated and have proved the more successful the past few years. Northern Illinois is embraced in what is known as the "Spring-wheat region," and the production of Winter wheat has not been large; but notwithstanding all drawbacks, the aggregate amount produced the past season in this section was greater than that of Spring wheat. The average yield of Winter wheat in this State, according to the estimate of our State Department of Agriculture, for this year, is 18 bushels, and of Spring wheat 9½ bushels. The Spring wheat in this locality promised well for awhile, but was injured by chinch bugs and the hot, humid weather at the time it was maturing. Some fields were not worth harvesting; others yielded from five to 15 bushels per acre. Rye was a fair average crop, but the acreage was not large. It generally does well here and might be raised to advantage and profit, if there were paper-mills, etc., for utilizing the straw. Barley and oats yielded well, but the quality was not good. Corn that was planted early, on dry, rich land, was excellent both in yield and quality, but a large portion was not so good as last year. The average yield here is about 40 bushels per acre. Hay was a light crop and a considerable portion was spoiled by wet weather; hence, good hay is scarce and dear this Winter. Potatoes rather scarce. Apples plenty. Garden vegetables were in no wise scarce, and the cellars are mostly well stored with fruit and vegetables.

Live stock of all kinds has been generally healthy and in good condition. About the second week of November, the epizootic broke out among the horses, but did not prove as severe as in 1873, and is abating. Have heard of a few cases of so-called "hog-cholera" this Fall, but the disease was not generally prevalent.

Winter set in here about the middle of November, being a month earlier than usual, and the weather has been cold and blustering the most of the time since, but very little snow has fallen here, and we fear the late dry, hard-freezing has been severe upon the Winter wheat, etc. The Fall was favorable for outdoor work, and most of the farmers are pretty well prepared for Winter. There were some indications of a thaw last week. Cloudy and foggy on Saturday and rained a little at night, but the weather was only "foolin'," for it soon turned cold and has been of an arctic nature all this week. Had a light fall of frosty snow yesterday. Clear and cold to-day.

To the RURAL NEW-YORKER and its hosts of readers, your correspondent cordially wishes all A Merry Christmas and Happy New Year.

W. B. D.

ILL., Paris, Edgar Co., Dec. 5.—It is almost a year since I received the first number of the RURAL and it has been of much benefit to me, though I am only a common farm hand. I think that if more of us would take some papers of the kind and read them and profit by their instructions we would be better able to fill the place that is allotted us in the agricultural world, and be of more profit to our employers and ourselves. I intend to try and get a few names for the RURAL. The seeds that I received last Spring did not do as well as they should have done owing to dry season here. I received from the oats three pounds of seed and seven pounds of straw, and I think that is very good when other oats were hardly worth cutting. The farmers are behind with their corn shucking on account of the cold and the snow which has covered the ground for the last month. I do not think there is more than half of it gathered yet. The snow all left last night in a heavy rain and at the present time the wheat looks splendid and as green and fresh as though there had been no cold spell at all. I think the wheat looks better this Fall than it did a year ago. There has been about the same amount sown. The corn crop is the best we have had for some years, and the price is good, 35 cents a bushel. I had from between nine and ten acres, 700 bushels. It was drilled in the row eight inches, the rows were three feet and three inches apart. I first harrowed the ground till I got it thoroughly pulverized and plowed it twice and I think it did well for the work done to it. E. B. R.

ILLINOIS, Highland, Madison Co., Dec. 7.—Since the middle of November we have had very cold weather. On the first of December it was warm and staid so for a few days but on the night of the 4th it turned cold again, and now it is about 20 degrees below freezing. Many farmers have got to husk their corn, they could not do it before on account of the cold spell. Corn will not yield as much as last year, and will be of lighter weight. In some sections there is none at all it having been all destroyed by chinch bugs, and drought. The price ranges from 30 to 35 cents per bushel.

The growing wheat does not look as strong as last year as it has generally been sown late, and the weather has been rather unfavorable for it since then, and now 20 degrees below freezing without snow to cover it does not help it much. The price of wheat in this place is $1.00. Roads are now very rough and not much hauling is done except by the ice men who are filling their ice houses. This county has the honor to be the banner county of this banner wheat growing state. The acreage in winter wheat in 1880 was 141,576 and the yield reached the enormous aggregate of 3,539,400 bushels; which will make at least $2,960,000.

C. L. R.

ILL., Champagne, Champagne Co., Dec. 10.—We have three or four inches of dry snow, the fifth or sixth snowfall of the season. This snow came after a thaw, a rain and thunder storm, and gives us the third cold spell of this winter. The mercury went down to 10 deg. below zero yesterday morning, and this, it stands near zero with a change to moderate weather and more snow, probable. There is a coal and a water famine prevailing here as elsewhere over the entire northwestern prairie country, intensified, however, outside of the coal measures. Corn is harvested and turns out half a crop, compared with last year; hogs and cattle have been mostly disposed of; the winter wheat crop is in a very good state of preservation; prices, with fluctuations from day to day, are on the rise and a very general state of health and prosperity prevails. If this season follows many examples set by others, we are pretty sure to have some very severe weather indeed, between this time and Christmas, or a while thereafter. B. F. J.

ILL., Ludlow, Champagne Co., Dec. 8.—Our Winter, which began about the middle of November was interrupted for a few days by mild weather which took off the snow, but on the night of the fourth there were thunder and considerable rain; this was followed by another cold turn which has increased in severity till to-day, which has been the coldest of the season, the mercury standing between six deg. and ten deg. all day. A couple of inches of snow fell last night, which is some protection to wheat. There were six to eight inches of frost in the ground before the thaw, and probably there is about the same now. There is some corn yet in the fields, though a great deal has been gathered during the last two weeks. Corn has been freely coming into market with the prices at 34 to 35 cents for 56 pounds shelled, 32 to 33 cents for 75 pounds in the ear. Beef, alive, $3 to $3 50 per cwt: Hogs $4 20 to $4.25 alive; oats, 28 cents; butter, 20 cents poultry and game plenty and a drug in the market. "G."

WIS., Freedom, Outagamie Co., Dec 10.—Corn was our best crop in this part of the State, and I think it was equally good in all parts of the State. One hundred bushels of ears to the acre are considered a good yield with us. All the corn raised here and more is fed at home and marketed in the shape of beef and pork. The wheat crop was very poor in this county as well as in all this part of the State. Luckily, farming with us is not confined to wheat alone, and most other crops were good. So we hear no serious complaints, as almost every farmer has something to sell for which he has ready sale and a cash market. The lumbering and mining country north of us affords a good home market for everthing in the line of meat. Good butter is worth 20 to 25 cents, cheese 15 cents. We had good weather for doing up Fall work, all plowing is mostly done. Stock of all kinds go into Winter quarters in good shape. Winter has come upon us earlier than usual and very cold but not snow enough for sleighing yet. The Mold's oats grew rank but rusted badly. Black oats are not in favor with our farmers and they will not sell. The Golden Mangels grew finely and produced some pretty large roots, a fifteen pounder being the largest, I cannot say if they are better than the Orange Globe, the kind mostly grown here. The Cuthbert raspberries failed to grow. I think they were dry when received. J. R.

MISSOURI, Greene Co., Nov. 16.—Ordinarily, in Southwest Missouri, our Autumn season is most delightful and very *long*, with scarcely any real Winter earlier than the 15th to the 20th of December. Now, November 16th, we have six inches of snow with the mercury 10 deg. below zero, colder than at *any* time last Winter. This is 30 days, at best *earlier* than our usual Winters. Some farmers and others are surprised and not ready—not so with Nature, this time a prophet, foretelling us of this early approach of Winter by an early and thorough preparation of all things under her control. All fruits, vegetables and grain ripened about 30 days earlier this year, in this locality, than usual. The young wood in vineyard, orchard, and forest was fully ripe. Our budding, in nurseries, was cut short. The happy singing birds, refusing leafless trees, left us early for their Winter home in the "Sunny South." From instinct, animals left their Summer range for Winter quarters before the hasty season came. Were all these "Signs of the time coming" which we should have discerned and been ready for? Though Winter has come early and may be long, there is an ample supply of food for "Man and beast." Never, perhaps, has there been such abundance of all the products of the soil, here, in any one year before. For this evidence of the care of Him who feedeth even the "Young ravens when they cry," we trust we, as His people, are not quite ungrateful. On later examination I find fruit buds killed on the peach, pear and cherry. Much loss has fallen to gardeners, unharvested vegetables being frozen and lost. Fruit growers and shippers, many of them, have lost heavily of apples; one farmer lost 400 barrels. Many farmers lost theirs from bad storage.

"JOT."

IOWA, Oskaloosa, Mahaska Co., Dec. 4.—I was in hopes that some one from Mahaska County, better able to wield the pen than I am, would have contributed a mite to your valuable paper, one of the best papers in the Union, both a news and an agricultural paper in one. Every farmer should have it. Every department in this part of the country is prospering, and will be likely to continue if our present finances hold on, thanks to our Secretary. We have had remarkably cold, dry weather for the last month. Stock water is getting scarce, and it is feared that wheat has suffered. No snow in these parts. Hay is scarce and worth fifteen dollars per ton; potatoes are scarce at 40 cents; apples plenty at 25 to 30 cents; corn, 30 cents, and oats, 25 cents. There is some dairying done on a small scale, but no extensive dairies in this part of the county. Cheese is worth from 14 to 16; butter, 20 to 25 cents. A. B.

UTAH, Glenwood, Sevier Co., December 1.—The RURAL comes regularly to hand, and is cut open and each member of the family that is old enough to read has a portion, one the story, another the correspondence from the cousins, and another, your humble servant, the chapters on fertilizers, &c., till it is pretty thoroughly read; then it goes to the neighbors that have any interest in such things. The first six weeks of Autumn were very pleasant and a great deal of plowing was done ready for Spring sowing, most farmers believing that they realize from five to ten bushels of wheat per acre more when Fall plowed. The land is usually well irrigated first so as to soften the under crust. The frost works up the soil better when it is wet, and the stubble rots quicker.

Wheat was about an average crop, and brings now 75 cents to $1. Oats and barley 1½ cent per pound. Corn was of a fair growth but a severe frost on the 19th of August killed it outright. So with all tender vegetables. Our Dixie neighbors bring into our valley a good deal of dried apples, peaches, grapes, &c., and "Dixie wine," which compares very favorably with California wine of 20 years ago. But why will people convert their grapes into wine when the juice might be made into delicious jelly.

Fruit-tree labels seem to draw a good deal of attention now-a-days. The best arrangements I ever found for distinguishing the kinds of fruit trees was to cut the initials into the bark of the tree with a sharp knife, as R. A. for Red Astrachan; R. I. for Rhode Island greenings, &c.; it takes but an instant and can never be lost or misarranged. The best apple for drying I have found to be the Porter, giving about eight pounds of dried fruit to the bushel of 44 pounds; Red Astrachan the poorest, only giving between three and four pounds.

Of Smut in Corn: I manured a narrow strip of my garden with smutty chaff, and it was a "caution" how the smut appeared in the corn—planted on it—scarcely an ear missed; some balls were as large as one's head. The tassels were covered with smut, and it broke out in knots and streaks all over the stalks. The corn adjoining was uninjured and showed no signs of this fungus. Does not this point to some unaccountable freaks in smut in wheat?

It seems to me that the centrifugal plan of separating the cream from the milk is wrong in principle; we find water in rapid motion carries sand, gravel, pieces of wood and even rocks and holds them there; but when it comes to rest, these articles drop to the bottom or float on top; why not the milk in motion hold the globules of cream in solution notwithstanding the centrifugal force that tends to separate them. It seems to me that subjecting the milk to a pressure of several atmospheres would compress the substance of the milk to a smaller compass and cause the globules of cream to rise to the surface rather than suffer the pressure of the surrounding medium. The smaller globules, which vary in buoyancy in proportion to the cube of their diameters, I presume would have a greater tendency to rise in a dense medium.

I do not think that salt has any value as a fertilizer unless it is on land containing lime, which, we are aware, separates the elements of the salt, and forms nitrate of soda, taking the nitrogen from the atmosphere or other sources. I assure you I have plenty of salt in the soil of my homestead but I find no fertility in the soil till the salt has been dissolved out by constant watering and draining. In the north of this Territory, where there are mountains of limestone and the soil is full of such deposits or in the form of lime cement, the soil is very rich and good for cereals and vegetables, and the salt is replaced by soda; but in this county, 300 miles south we have mountains of salt, gypsum, burnt granite, sugar stone etc., on the east side of the valley, and red and gray sand stone on the west. The land on the west side is much richer than on the other. Wherever the soil is red, it is good for grain. W. M. C.

FLORIDA, Rock Ledge Home, Indian River, Nov. 25.—Being a subscriber to the World, has placed in my hands the liberal joint offer made for the two papers. My attention is particularly attracted by the free offering of valuable seeds and plants. I happen to occupy a position which makes me particularly desirous to possess all of the different growth to be had for testing their value in this new and undeveloped country. We have certainly the most delightful, genial, and healthful country known to man. Travelers say our climate is much dryer and more equable than that of Italy, and consequently more healthy. We have a deep, sandy loam, in many instances, of a dark, snuff color, rich in decomposed vegetable mould, and underlaid with decomposing shell and coquina, with a dense growth of Live-Oak, hickory, hackberry, mulberry, marlbush, grapevines; and in special localities, the more tropical Indian rubber, gum-olimbo, break-ax-torchwood, wait-a-bit, iron-wood, palms, etc. The idea of extended areas of lands, hundreds

of acres for the cereals at the north, and with the southern planters, for King cotton, is entirely discarded with us, and we propose to realize an income of thousands, from only acres, instead of hundreds of acres. Upon our lands, we aspire to have Orange groves yielding at 10 years old, $1,000 per acre, and at 20 years old, $2,000 per acre. Rev. Mr. Thomas, of Penial, sells from one acre, from $1,800 to $2 600 worth annually from a grove 25 years old. I have trees eight years old with 1,200 to 1,500 fine fruit per tree—some growers have a larger yield from trees of the same age. These lands are also first quality for garden vegetables, guavas, casava, bananas, etc. The more tropical localities, Merretts Island Hutchinson, and particularly Jupiter Island, on the east of Indian River and washed by the rolling billows of the ocean on their eastern shore, are attracting our especial attention. In ten years Jupiter Island will be an extended grove of orange, banana, cocoanut, mammee apple, mangoe, and sappodilla with thousands of pine apples, and paying its happy possessors thousands of dollars. Added to this there are beautiful sites for residences, 30 to 40 feet in hight and over-looking the ocean on the east, and fanned by the balmy breeze of the trade winds. I propose to set 500 cocoanuts, 50,000 pines, 1,000 banana and mangoe, avocado-pear, sappodilla, tamarind and mammee apple, and would like to procure the cherry-mollier, mangostine and one pound of coffee seed. Manatee, northwest and about two deg. colder than Jupiter Island, is raising coffee quite successfully. We solicit settlers from the best class of people from North, South, East or West. We need labor and capital to develop our country into the Eldorado of the South. C. B. MAGRUDER.

TEXAS, Waco, McLennan Co., Dec. 3.—We are just at the end of a three weeks "Norther," during which we have had some extremely cold weather, as cold as I have ever seen it at any time in the State. The ground froze about two inces deep, and sweet potatoes that were still in the ground have been much injured. After harvesting my early crop of Irish potatoes, I selected the very small ones about the size of hickory-nuts, and planted in the same ground. I had a furrow made by a small turning plow and dropped these small tubers about 18 inches apart, and owing to a press of other business, they were not cultivated at all, and of course I did not expect any potatoes, but I never have had a better crop, and what seems most singular, there were no very small tubers. The fact is, we can always raise two crops of potatoes on the same ground, unless there is an unusual drought. I planted my sweet potatoes in ground upon which I raised a crop of Irish potatoes, and raised a splendid crop. My Eunobled oats rusted so badly that I saved but little seed, owing, as I think, to being planted too late. The Mangels did very well, but I failed with most of the flower seeds, from some cause that I cannot account for. I received a few cuttings last Autumn of the Le Conte pear, from Mr. H. H. Sanford, of Thomasville, Ga., and they have made a most remarkable growth, two or three of them are fully six feet high, with strong and healthy trunks. It does seem, that if pears can be grown so easily from cuttings, it would be far the better plan to propagate them, as you are then sure of what you have, and more certain of a healthy tree. Last season I grew the Sharpless and Forest Rose Strawberries; each of them did well, but the Forest Rose, I think, is the hardiest, as it suffered less from the effect of drought. I planted tomatoes between the rows of strawberries with a view to sheltering the ground from the heat of the sun, but it proved to be all wrong. Wherever I had a good stand of tomatoes, the strawberries died out, while where there were no tomatoes, none died, but continued to grow and remain fresh and green during the whole season. I also planted tomatoes between some of my young grapes, and wherever the tomato vine was near the grape, the latter made little growth, while others separate from the tomatoes made a vigorous and healthy growth of vine and foliage. My experience is that the further the tomato is grown from the grape and strawberry, the better it will be for them. Now, Mr. RURAL, accept a bit of praise, if you please, for you keep so full abreast of the times that I anxiously await the receipt of the RURAL, and read it through at one sitting often times. I receive several agricultural journals regularly, and have had specimen copies of many others, some no doubt of those who were not willing to dispel the "bliss of ignorance" of their readers to enable them to grow wise by reading the best. A. S. S.

TEXAS, Dallas Co., Dec., 5th.—November has been a disagreeable month with us away down in Dixie; we have had two severe snow storms during the month, and the rest of the month cloudy, drizzly, and cold; and now the mud is so deep the roads are almost impassable. The corn crop was good so far as it went, but there was not enough planted. A good many planters think they can raise cotton to buy corn and meat and make more money than they can by raising corn and hogs, but I think some of them have already seen the error of so doing and more of them will, I think, before they make the cotton crop pay for their corn and hogs for another year. The yield of cotton was an average one but a considerable portion of it is yet in the patch, and is badly damaged, and unless December is an open month it will remain in the patch. The hog crop is rather short, pork is selling at from eight to ten cents per pound, corn 35 to 40 cents per bushel, the sweet potato crop was very heavy, but a good many of them got frozen before they were dug. So they will not keep but a short time, those that did not freeze will not keep well on account of their being chilled in the ground. N. H.

TEXAS, Belle Plain, Callahan Co., Dec. 6.—We have had unusual cold weather for the past four weeks. Sweet potatoes all frozen. Much of the late cane frozen; of five varieties the Early Amber takes the lead for feed. I cut three crops from one planting. My mangels were a failure as the bugs were too fond of them; the Raspberries were so long on the way that they also perished. Corn crops very good and selling for $1 per bushel; wheat but little sown and that for pasture, will plow up and plant to corn in the Spring. This place is filling up with sheep, mostly Improved Mexican, we use Merino bucks. The last cold spell has developed a few cases of scab, otherwise, flocks look well. F. P.

The Querist.

ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention.]

Soil, Climate, etc. of N. C.

NOTE. The letter of inquiry to which the following is a reply was forwarded to Dr. D. E. McAboy, who resides in the section of North Carolina, inquired about. The Doctor returned to us the answers appended, but not the letter of inquiry—so that the usual initials, County and State of the writer are necessarily omitted. The letter of inquiry requested that the Editor of the RURAL NEW-YORKER should, himself, answer the questions contained therein. But he begs to state that ill-health, which induced his visit to the so called "Thermal Belt" prevented his acquiring a sufficient knowledge of the Country to enable him to answer several of them. The Doctor says:

I have your note with letter to be answered enclosed, and I hasten to give you all the light I have on the soil, climate, productions, etc., of North Carolina. Should your correspondent want authoritative information, he will find it in the Hand Book of the State, published by the Commissioner of Agriculture of the State of North Carolina.

1. What part of Polk County did you visit? Ans.—Tryon Township, at the foot of Tryon Mountains—Lynn P. O., N. C.

2. Is it a clay or loam soil? Ans.—The upland has much clay mixed with sand and mica. The creeks and rivers are a loam soil with micaclous sand. We have red clay and yellow, and in some places, the white or blue used for stone ware.

3. Can raise cotton. The cotton belt runs up half way to the top of the mountain. We are proposing to put in 50 acres of cotton next year.

4. Can raise peanuts. They are not grown largely here for the markets, but on our sandy land they grow finely.

5. Cannot answer from my own knowledge how many can be raised per acre.

6. The climate is healthy. Free from all malaria and malarious diseases, and is now considered as one of the most popular health resorts for Summer or Winter.

7. Have no long-continued droughts. The mountain's attract the rain showers.

8. The water is soft.

9. There are many Springs, some of them highly mineral.

10. No limestone in Polk County; good limestone is found 28 miles north, near Hendersonville, and south in Spartanburg, South Carolina, 50 miles due south on the Air Line Rail Road.

11. Lime is easily obtained by railroad from Henderson County, North Carolina, or from South Carolina.

12. Good bottom land, is hardly ever offered alone, generally the farms consist of hill and upland as well as bottom land. When sold alone they are valued all the way from $25 to $100 per acre, while 50 acres of bottom land with 200 or 300 acres of fair upland (cotton land) will be offered at $10 per acre.

14. The land titles are *good*, very little litigation about titles.

15. The Spartanburg and Asheville Rail Road runs through Polk County, with its Tryon Station on this farm.

16. Produce realizes good prices here. Corn at our Station 55 cents per bushel; wheat $1 25; hay, $20 per ton. We are at the head of the upland cotton belt and corn is always high and all the other products, for the simple reason, that everybody is engaged in cotton raising below, and they come up to these rich valleys for corn and produce.

17. The local freights are high. We pay from 12 to 25 cents per 100 for our goods from Spartanburg, South Carolina, 27 miles. But freights by the great through lines are very reasonable from New York this way by Richmond, Virginia, or by the ocean route by Charleston from New York. Passenger rates, local, five cents per mile, *tourist* rate three cents per mile.

18. The Public School System of the Northern States is the law of the land, but here, as they have large districts, and schools kept but a few months, we depend mostly on private schools. Churches are not plenty. The Baptist and Methodist Churches predominate. The country is too thinly peopled yet for churches and schools. The farms are too large, think of it, for seven miles along this highway there are but three farms, one of 2,400 acres one 600, and the other, this of 2,250. On these lands are over 300 people, and except three or four families, they are not the class to support either schools or churches.

19. The white population predominates in Polk County, and more so in the counties north of us. When you get in South Carolina the black race predominates, so also in the coas regions of the North State.

20. Labor is plenty and cheap, average of males $10 per month with board, and $13 to $15 and board themselves. Females, $6 per month and board.

21. Good land is found in very many places all along the base of these mountains. The land on North Paccotee is considered richer because it runs along the base of the mountains, and the valleys are made of the mountain *debris* and washings constantly coming down year by year. There are may desirable sections for corn, cotton, wheat, peanuts, and tobacco, and many that have fine water. All the Piedmont lands of N. and S. Carolina are well-watered, and on the top of the mountains there are abounding springs of the very best water.

But the climate of this valley is peculiar, "*sui generis*." Yesterday, December 7th, the mercury stood 25 deg., while 10 miles above at Saluda, it stood at zero, and at Hendersonville, the same. We are in mid-Winter with no sign of snow yet, though the mountains north of us have several times been white with snow. Our railroad facilities are now very good, we have a daily mail each way. To those who seek a country for agriculture, all the south side of these mountains offers great inducements. But for fine fruits, which seldom fail, good air and water and health, we are honestly of the opinion this Tryon region is not excelled any where. Yours truly.

Lynn P. O., N. C., Dec. 9. DR. D. E. MCABOY.

Four Months too Long to Go Dry.

V. B., Canaseraga, N. Y., writes, I have a Jersey cow 5 years old. She has been milked a year and seven months continuously, and will come in again 13th next March. She is in good order, but gives only a teacup of milk twice per day. If now dried she will go dry about four months. She has no slop. Shall I slop her and milk her or let her go dry now?

ANS.—We wish our correspondent had mentioned whether she was a large or small milker when fresh in milk, what her feed now is etc. Jerseys usually hold out their milk remarkably well—it often being more difficult to dry them off than to keep up their milking. Four months are too long for a cow to go dry, unless in the case of a very deep milker that has given milk as long as this cow, and may need rest to recuperate. This cow, however, seems to be in no need of a long rest, and it may be an injury to go dry so long. Should advise that she be fed one quart of oil-meal or six quarts of bran or middlings per day, wet up with hot water and allowed to cool. This should be given in two feeds with about 1½ ounces of salt. Begin with half this quantity and gradually increase so as to reach this amount in one week. The greatest care must be taken to milk the cow perfectly clean. Milking has much to do with a cow's holding out her milk. If this plan had been adopted a month or six weeks earlier it would have fully accomplished the object. If the cow shall have become so near dry before this reaches our correspondent that her milk cannot be recovered, then the best plan is to give her one pint of oil-meal per day until five weeks before coming in, when she should have a slop of about three quarts of bran per day in one feed until the last week, when this should be reduced one-half; and, the first week after coming in, she should have a slop of a pail full of tepid water with one quart of bran, morning and evening. After that she may be fed well. This plan will be likely to develop her milking capacity.

Miscellaneous.

Newton Hatcher, Dallas Co., Texas, asks, 1, what ails my land, my sweet potatoes will rot before they are half matured! the vines even will rot off just below the surface of the ground. The cotton plant will die on the same spots before the plant matures half a crop. Apple, cherry and pear trees will not live three years on it. The peach and plum will thrive on the same spots six or seven years and then die, they die first just below the surface, on the main root, the bark, both the inner and the out side will be dead commencing about one inch below the surface, running down three or four inches, then there will be live bark below and above; the gum exudes from the tree by the pint, so thin it will run on the ground, and the bark peels off of the dead part and has the appearance of being frost bitten when the sap starts in the spring. Now don't say borer for I hunt the borer twice a year and know how to find him. Besides other trees, the umbrellas, china, catalpa are effected in the same way; and the borer don't like either of them to my knowledge. Now what is the cause, and the remedy? 2, does the borer come out of the tree as a fly or a beetle, if so how long does it remain in the tree as a grub.

ANS.—The trouble is doubtless due to what is known as alkali in the soil. Alkali spots are frequent through all the prairie region from Texas to Colorado. These alkaline salts are usually sulphate of magnesia, an impure kind of Epsom salts, with which the soil is more or less saturated; they are usually springy, and the salts are deposited by the water in which they are sometimes so plentifully contained as to be unfit and dangerous to drink. The remedy is to drain the spots, to plow deeply, to summer fallow, stirring often, and to have patience until the soil is slowly freed from the impurity. Further west in Texas many hundreds of square miles are made barren by the same cause. 2. As a beetle. It remains as a grub about 15 months. It throws off its grub skin and becomes a pupa usually at the close of the second summer. Thus it lies through winter, changing to its perfect form the following spring. It then cuts with its jaws a smooth round hole of the exact size to enable it to crawl out of the tree. The sexes then pair, and the female deposits another crop of eggs.

D. E. S., Norton, Kas., asks, will you describe in the RURAL, your mode of "flat" cultivation? 2. Which do you prefer, the Doura or Branching Sorghum? 3. The B. S. is such a vigorous grower, are not the roots worse to get rid of for next crop than those of common sorghum or broom corn?

ANS.—1. There is little to describe. We use a shallow cultivator which does not throw the soil into ridges. The hoe is the only other implement used. The men are instructed not to hill up in the least. 2. The "Doura," as it is called, is not worth sowing as a forage plant. It has but one stalk and that is large with fewer leaves than corn. The seeds (which ripen freely in this climate) are good for chickens. The flour may prove of value when mixed with other flour or treated in some new way. 3. No, we think not.

R C., Upland P. O., Ontario, says that in the RURAL a few weeks since I noticed "Insect Powder Pyrethrum," highly recommended as a protection against mosquitos. On referring to my dictionary I find Pyrethrum is an order of plants to which Feverfew belongs. Is the common Feverfew obnoxious to mosquitos? How is the Insect Powder prepared and how used?

ANS.—The Chrysanthemum Roseum is the variety used for the preparation of the Persian Insect powder It is from Persia and North Asia, and grown somewhat as an ornamental plant. The pulverized flower-heads furnish what is used to destroy insects.

H. L. W., Newbern, Va., wants to hear something of the Queen of the Prairie corn, knowing we tried it at the farm last year.

ANS.—We did. But the fence of the field in one part was broken down and the cattle destroyed it.

A. B. C., Rock Spring, N. C., asks where he can obtain seed of the Rural Branching Sorghum.

ANS.—At present it can only be procured through the Rural Free Seed Distribution.

A. J. J., Midland Co., Mich., sends a leaf of a plant for name.

ANS —It is a Stonecrop—Sedum—but we cannot give the specific name from a leaf alone.

All Monthly prostration and suffering by ladies is avoided by using Hop Bitters a few days in advance.

THE
Rural New-Yorker,
PUBLISHED EVERY SATURDAY.

Conducted by
ELBERT S. CARMAN.

Address
THE RURAL NEW-YORKER,
No. 34 PARK ROW, NEW YORK.

SATURDAY, DEC. 25, 1880.

SPECIAL NOTICES.

AS ALREADY announced, the SPECIAL CORN NUMBER of the RURAL NEW-YORKER will be dated January 1st.

SUBSCRIBERS who receive the RURAL without any NUMBER appended to their names or address, may know that their subscription terms expire *with* this Number.

OUR PRESENT Plant and Seed Distribution will be begun about January 15th and continued until further notice. The WHITE ELEPHANT Potato will be mailed separately in a little wooden box as the weather permits. Subscribers are advised to place it in sand and keep it in a temperature as near 32° as practicable.

DOMESTIC ANIMAL SHOW.—The American Institute which has just finished its forty-ninth highly successful annual fair, and during many years occasionally held cattle shows, and field trials of agricultural implements, is now discussing the advisability of an exhibition next season of all domestic animals, useful, ornamental and otherwise. It is intended to comprise all the farm animals, quadruped or biped, and their products, as well as dogs, cats, birds and all other pets, not forgetting bees with all their complement of queens, hives, honey, wax, etc. There is here scope for one of the most interesting shows ever witnessed in this country or indeed, anywhere. A general gathering together of all domestic animals will be a new departure, and may if successful, be but the forerunner of many such displays.

AND so the year is closing. It is hard to realize that this is the last number of the RURAL NEW-YORKER for 1880. How quickly the year has flown! And thus life flies. It is rather strange that the longer we live the shorter life seems. We wish our friends a Merry, Merry Christmas. To many who read these lines we shall not have the opportunity of saying "Happy New Year!" How well soever the RURAL may have served the interests of its readers; how kindly soever they may feel towards the RURAL, yet, for reasons more than one, many of them will cease with this year to be its subscribers. Our lists are increasing faster than ever before in the experience of the RURAL NEW-YORKER. This is gratifying—very. Nevertheless we part with old friends with regret. We wish them especially a Merry Christmas, and, anticipating a few days, a Happy New Year, as well.

A GREAT loss in the importation of the celebrated thoroughbred horse, Blue-Gown, from England, has just been sustained by Mr. James R. Keene, of New York. He paid $20,000 for the horse, and he was shipped for this port about the middle of November. The steamer met with fierce, stormy weather, and pitched and rolled so badly during the voyage as to cause the death of the poor animal, after long suffering. Losses in cattle shipped abroad continue fearful, and it is astonishing that they are still kept up; in fact, notwithstanding all this, are rather on the increase than diminishing. Grown animals should only be sent to sea during about five months out of the year, say from April 15 to September of the same date. Fierce storms do not often occur on the Atlantic Ocean during this time, and little danger of loss from them is consequently to be apprehended.

A BUSINESS MAN, whose knowledge is varied as regards everything but farm work, whose mind has been trained to the methodical and accurate ways of business, takes a farm and in a short time reduces its irregularities to order, its work to a system, and its conduct to a profitable result. He succeeds by virtue of these business methods, which have made the acquisition of practical knowledge easy, and have given a habit of scanning, with the greatest carefulness, every expenditure, and of suddenly stopping every leak through which profits might be frittered away. The best of improved stock, improved implements, drainage, the best arranged buildings, improved plants and seeds, effective fertilizers and the most improved methods have many of them been introduced into farm practice by business men who have become farmers, but who meanwhile have suffered derision and detraction at the hands of those who were glad afterwards to benefit by their example.

SILK CULTURE has had its short periods of favor with the American public, followed by long terms in which it appears to sleep the sleep of death. It is now once again occupying the attention of many. In the manufacture of silk goods, furnished as they are with the imported material, our mills have no superior. Our silk fabrics are by many rated as the best of the world, as it is not our custom to weight them nearly so heavily as are the imported dress goods. When a splendid satin is able to stand alone be sure that it is not all silk, for sometimes only one-third of the weight comes from the silk-worm, the remainder being one of the secrets of the trade.

As far as known no silk raised in our country finds its way to its 300 factories. Efforts are being now made at the South to increase the food supply of future worms by largely planting the mulberry tree, the leaves of which are the favorite food of the common silk-worm. The difficulties heretofore found in the way of successful silk raising have been more practical than theoretical, and we shall, hoping for their removal, lend our aid to forward this important industry.

CONGRESS AND THE CATTLE DISEASE.

ONE of the most important subjects that will come before the Agricultural Committee of the House during the present session, is that of the cattle disease known as pleuro-pneumonia. Already a large number of petitions have been referred to the committee urging immediate action on the question, prominent among which was that of the National Grange, advising that such laws be enacted as will not only arrest its spread, but effectually exterminate the disease from the country.

Various constitutional questions seem to be involved in any attempt to embrace the entire subject under a national legislation without infringing upon the rights of the several States, but we have no doubt but that some satisfactory solution of the problem will be arrived at, at an early day.

Commissioner Le Duc recently submitted to the President the report, already referred to, of Mr. Charles P. Lyman, which contained the information called for by a Senate resolution of the 7th inst., relating to contagious diseases in cattle. In this document Mr. Lyman shows what districts are most infected by the disease, and he considers that all large cities are diseased centres. He recommends a restriction on the movement of cattle from the infected districts as the best means to check the contagion. Immediate action in this matter, on the part of Congress, will be eagerly looked for.

HOW TO MAKE THE BEST SACK OF FLOUR.

THE Millers' Newspaper informs us that some three years ago a National Association of British and Irish Millers was formed, and that on May 10, next, and the four following days, at the Agricultural Hall, London, they will have on exhibition all the different processes at work, together with every variety of machinery which they can obtain from all parts of the world, also in operation for the production of samples of wheat flour. In this way they hope not only to get that of the best quality, but also at the cheapest and best method of manufacturing it.

To show the interest now taken in this matter, applications are already made for 559 patents for improvements in machinery, etc. Of these Great Britain and Ireland have 103, Austria 46, Belgium 31, France 34, German Empire 69, United States 221, Canada 27, Italy 10, New South Wales 5, Ceylon 1, Spain 6, Victoria 2, India 1, Norway 2, Sweden 1.

We are glad to see our own countrymen so wide awake as to improvements in the manufacture of a superior article of flour, for it will be a very important assistance in obtaining a good market for our large and constantly increasing wheat crop.

Of the above 559 applications for patents, it seems Americans have made nearly one-half. We trust in addition to this many of our millers will attend the above exhibition, to come off next May in London, for in doing so they will learn much for their interest and improvement.

STEAM PLOWING.

MUCH as we excel the rest of the world in agricultural implements, both for cultivation and the after-gathering of the crops, steam plows, which are highly extolled and constantly used in Great Britain, do not prove a success here. Our patent office reports, for many years, show how persistently our inventors have pursued this subject, and how they have built traction, stationary or locomotive engines in a, so far, vain endeavor to solve the problem. The Fowler plow in England appears to be one of the usual requirements of a large farm, and cumbersome as it is, it does its work in a satisfactory manner. Here, where the almost measureless fields seem to invite this improved labor, horses yet are entirely depended upon to till the ground, and we do not see in any reports of farm proceedings any evidence of steam being now employed in this manner.

However, the matter is not dead, and Mr. Peter J. Macdonald of San Francisco, has lately patented a new device, which presents some novel and apparently better features than any of the other plows. His machine is locomotive, a boiler with steam engine attached working the plowing portion, which consists of two arms each about fifteen feet in length meeting in the center behind the boiler, and running at right angles to it, and supporting each two plow-shares, which are pulled toward each other, turning the soil as they move. When they reach each other, they are automatically run backward to the ends of the transverse arms, and the whole machine moves over the unplowed ground two feet, and without any assistance in the change from plowing to motion these operations are repeated. As the plowing has no tendency to move the machine in any direction, it need not be made so heavy as to offer more resistance by weight than the plow-shares do in their motion, and as it is not traveling and plowing at the same time, less steam power is required than when these efforts occur simultaneously. This plow is quite new, and if these points are not offset by some unforseen objections, may make a long step in the indicated direction.

STRIVING FOR THE UNATTAINABLE.

WHEN Mr. Samuel Patch first contemplated his notorious leap, he remarked that "Some things can be done as well as others." He lived, or rather died, to prove that he was mistaken, and that some things are impossible. The American citizen is a sanguine person who, to a great extent, believes that all things are possible—at least to him. So there is a general restlessness prevalent, an ambitious desire to emulate, and surpass, if possible, every startling occurrence. This is observable in every direction. When Dexter made his wonderful record, and some men thought the highest possible speed had been obtained, others set about reducing it, and at short intervals we have been surprised by announcements that this and that record has been lowered, until now a mile has been trotted in 2:10¾. By and by it will be down to two minutes, perhaps. And will that be the end? Who can say, in view of what is passing before us in every direction, what the unattainable may be? A noted cow yields nearly 700 pounds of butter in a year, the value of which, at the ordinary market price for the best creamery only, would be $210. Such a fact is like lead to the aspirations of the average dairyman. Can he ever attain to such success himself? And he makes up his mind that it is beyond hope, and goes on in a sort of desponding way with his 150-pound cow and his $30 a year as her income, and gazes on vacancy in his thoughtfulness with a very sad countenance, because some things are beyond his reach. And in other directions other men feel similarly. But is this a right and proper determination? By no means. If men had never striven after what is unattainable, they would never have reached what has been attained. Years and years ago the old alchemists spent their lives in efforts to transmute base metals into gold, and to discover a liquid which should make life self-sustaining and snatch the victory from disease and death. For centuries men have worked and worked to discover perpetual motion. It may be safe to say that these laborers could never have reached what they desired to attain. But the whole science of chemistry and mechanics is based on the discoveries of those old investigators, made during those futile efforts, and we are to-day reaping the rewards of their labors; and it is the same to-day as it was, and it will ever be as it is to-day. Therefore let no one be discouraged or despair because something is presented to him which he fears may be unattainable. Let us all strive for the very highest point. If we do not reach it we shall make some progress towards it, and that will be reward enough to give us hope and courage.

BREVITIES.

IT would appear from various tests made with Early Amber Cane in the middle portions of New York State that the production of molasses from it is considered profitable.

A SUBSTITUTE for leather is now clearly demanded as one of the new industries of the country. Over $30,000,000 worth of raw hides were imported during the past year.

SOME of the least exhaustive products for export from a country are glucose and starch as made from Indian corn. They carry no mineral fertilizers, being wholly the product of the atmosphere.

RESPECTFUL notice, with many thanks, is given to our correspondents that the CORN NUMBER of the RURAL NEW YORKER is fully supplied with articles, and those, too, of a class that cannot fail to instruct every thoughtful reader.

THE importations of sugar for the past year were to the value of $75,000,000, representing 75,000,000 bushels of wheat sent away to pay for it. With the half dozen beet sugar factories now in successful operation, and something over 200,000 acres of sorghum grown the past season there is a promise that the time of this outgo may be limited.

THE want of amber cane mills of a character to do exact work, and of sufficient capacity to ensure the economical grinding, evaporation and reduction of the product, is seriously felt all over the Western States at this time. A crude product for home use may be made by each farmer, but there is economy in a mill that will do the work for from 25 to 50 farms.

As we have noted in our news columns, a flock of sheep in New Jersey was attacked during the night by dogs, and sixty-one killed and twenty-one mutilated. Facts like these should be kept before the public. It was but a short time since that the flock of Mr. Farwell, (Iowa), was attacked, by a lot of curs, nineteen of which were killed and several more or less mutilated. Some were driven into the river and others driven far away.

TWENTY-SIXTH ANNUAL MEETING. — The Twenty-sixth Annual Meeting of the Western New York Horticultural Society, will be held in the Common Council Chamber, (New City Hall,) Rochester N. Y., commencing Wednesday, January 26, 1881, at 11 o'clock, A. M., and continuing two or three days. Farmers, Fruit Growers, Nurserymen, all who are interested in Horticulture, and citizens of Rochester and vicinity, are cordially invited to attend. All will be free to participate in the discussions.

OF the many causes that contribute to the future prosperity of Kansas not the least effective is the constitutional amendment lately adopted, prohibiting the manufacture or sale of intoxicating liquors within its borders. The law is being rigidly enforced against the manufacturers of liquor, and in many of the cities local dealers are voluntarily abandoning the sale of it. The Governor believes that by the middle of January there will not be a distillery and rectifying establishment or saloon in the State. What a fine example this, one of the youngest of our States, is setting before its elders—and in the West, too, the West which has the reputation of being a heavy drinker.

THE alarming prevalence of diptheria suggests the publication of several remedies. As a preventive where the disease is feared, a mixture of equal parts of carbolic acid and glycerine, and putting 15 drops of the mixture in a glass of water, and giving a teaspoonful three or four times a day, is recommended by Brooklyn physicians. If sore throats, gargle with 15 drops in a glass of water. The following is given as a remedy in the early stages of the disease. "Stir a teaspoonful of flour of sulphur in a wine glass of water and give it to the patient to gargle the throat with. In ten minutes the patient will show improvement. In extreme cases, when the fungus has grown to such an extent as to preclude the possibility of gargling, blow the sulphur down the throat with a quill. This may cause the fungus to contract, and then gargling should be resorted to. Or take live coals in a shovel and sprinkle a couple of spoonfuls of the sulphur on them, and let the patient inhale the fumes. This will kill the fungus."(!?)

THE National Board of Trade in session at Washington, state in their reports on the public health, that they have investigated the purpose and scope of the National Board of Health, and recommend that Congress should make an appropriation for continuing the work already begun, and to enlarge the scope of the board in a series of original investigations concerning the prevalence and causes of our most fatal diseases, and also to a series of analyses bearing upon the adulteration of food, which are now being made in different parts of the country. The board recommend to Congress the passage of an act prohibiting any person or corporation from selling or offering for sale any article of food or drugs adulterated within the meaning of the proposed act, and defines carefully what shall be deemed to be adulteration. In order to carry into effect the provisions of the act in regard to the examination of imported and domestic food and drugs, the Secretary of the Treasury is authorized to appoint, from names submitted to him by the National Board of Health, suitably qualified persons as public analysists and as special inspectors to examine and report violations of the proposed law.

Literary Miscellany.

CHRISTMAS CAROL.

ELAINE GOODALE.

Our walls are wreathed with trailing pine,
And hemlock boughs are leaning
Dark where the blood-red berries shine,
With leaves of Autumn's gleaning;
Yet ah! how pale the Summer's pride,
How barren field and fallow,—
For why? the year must be so wide,
And Summer still so narrow!

Our chimney's glow with generous heat,
And all our lamps are burning,
We list the music wild and sweet,
With dance and song returning;
Yet oh! the vaster dark outside,
How cold and dumb with sorrow!
For still the world must be so wide,
And joy, alas! so narrow!

Our home throws wide its doors to-night,
Our threshold laughs with greeting;
With clasp as warm and step as light,
The old-time friends are meeting;
Yet oh! the few who stand aside
Bowed down by hopeless sorrow,
And weep that hearts should be so wide,
And love, alas! so narrow!

Nay, further press the strong desire,
The questioning, swift yet tender,
And lifted ever strangely higher,
Divine a holier splendor;
On Christmas-day, whate'er betide,
We have no room for sorrow,
For though man's needs be e'er so wide,
God's help grows never narrow.

INMATES OF LESTER HALL.

(Continued from page 838.)

There was a silence then, during which they both watched Cecil as she stood talking to Mr. George, with a smile on her lips and a shadow in her eyes.

"I know little or nothing of Cecil Lester's history," said Mrs. Brayburn, earnestly, as she left the doctor's side, "but there is a turned-down leaf in the book of her life on which is written a very sad story, believe me!"

She moved away from him as she spoke; and Dr. Carewe left the drawing-room, and finding his way to the deserted hall, threw himself into a chair before the fire and gave himself up to a train of deep thought.

Dr. Carewe leaned his head on his hands, and thought with all his might. Was Mrs. Brayburn right? Was Cecil really unhappy? If so, what was the cause of that unhappiness? Could it be true that she did not love the gallant young lover who was so devoted to her? Could it——

At this juncture a light touch on his arm broke the thread of his reverie; and looking up with a start, he saw Cecil standing before him. He started to his feet, and looked at her in silence. She was very pale, and her hand shook as she said, hurriedly:

"Dr. Carewe, may I speak a few words with you?"

"Certainly, Miss Lester," he replied, with a stiff bow.

And without taking a seat, she went on in the same hurried, troubled voice.

"I have been wishing to do so ever since I came here," she said. "But in a house like this it is so difficult to find an opportunity. You think we shall be free from interruption here?" she added glancing round with some apprehension.

"I think so," he said, coldly.

"I was so eager to speak to you," she continued, with a faint smile, "that to-night, when we were acting, I dared to say one word to you. I hope—I think you did not hear it."

"I heard it, Miss Lester," he rejoined, very coldly and steadily, although his face was as pale as her own.

"Then you did not understand?" she said, with a pitiful, repressed eagerness. "It was not Guinevere asking King Arthur to forgive her. It was Cecil Lester asking pardon of you! "Oh! Dr. Carewe," she went on, passionately, as she clasped her hands in her earnestness, and drew nearer to him. "I have been so unhappy! I cannot tell you how I have suffered, nor what my life has been since I knew the truth! Not that the wretched mistake I made excuses my cruel conduct, but——"

Her voice failed her, and the beautiful head sank low in her shame and distress.

"It almost killed me to see how I had misjudged you!" she said, in a moment, and her voice was faint and broken. "I know how you must despise me—I know how you must hate me—but"—she put her hand upon his arm for a moment—"by the memory of the love you once gave me, forgive me now!"

"You have chosen an unwise plea," he said, coldly. "What memories can that love bring to me, Miss Lester, when I think how you threw it aside—despised, mocked, scorned it!"

"I was mad!" said Cecil, piteously, "I was mad! Do not be hard upon me! My repentance has been bitter enough, Heaven knows—let it suffice!"

"I told you that I forgave," he answered, averting his face from the agonized entreaty in her eyes.

"I cannot be content with such a forgiveness as that!" she said, passionately. "Spoken in such a tone—given so grudgingly. I want you to look at me kindly; I want you to say, with my hand in yours, "Cecil, I have forgiven—I will forget.'"

He made no answer, but the proud face softened; and creeping closer to him, Cecil put her trembling hand upon his arm.

"Do you remember," she said, tremulously—"do you remember that night, and what you said? You said"—the sweet voice grew soft as music then—"Cecil, I love you as woman was never loved, and to win you I would give my life—my very soul!' Lawrence"—the beautiful face sank forward until it rested on his arm—"Lawrence I want to hear you say those words again!"

For a moment there was a dead silence, broken only by the hurried breathing of the young girl as she stood bowed before him; then, with a sudden passionate movement, he shook her from him, and turned to her fiercely as she stood cowering before him, pale and trembling.

"Love you!" he said, in a tone of bitter contempt. "I never loved you! I clothed another being in your beauty! I gave it honor, and you have none—I gave it a heart, and you have none—I gave it truth—you do not know the meaning of the word! I never loved you, I say! but now I despise your beauty, which has deceived me, and deceived that poor lad who loves you, and whose wife you have promised to be! Is this your allegiance? Is this your loyalty? Shame, thrice shame upon you!"

"Lawrence, have pity!" she moaned, faintly, "I am punished; mine was the sin, let mine be the punishment—but it is hard enough to bear without such words from you! Ah! don't you see—will you not believe—that unworthy as I am—I love you?"

Her voice died away in a low wail of pain, and Lawrence Carewe turned from her with a passionate exclamation of anguish; his face was pale as death, and his hands shook even as hers did.

"I have never known a happy moment since I sent you from me!" she pleaded, faintly. "Will you not say one word of pardon, one word of pity——"

"Silence!" he said, with sudden passion. "Silence! How dare you? You, the promised wife of another! How can I pity you? How can I do anything but loathe and despise you! As I do—for your falsehood, your treachery!"

They were bitter words, but Cecil bore them—proud Cecil Lester, whose pride was as conspicuous as her beauty was great. She answered nothing, but she shivered and shrank away from him as if a blow had struck her.

"Have you forgotten?" he said, coldly, "who you are? Has it escaped your memory that you are the affianced bride of a noble and honorable man, who trusts you as fully as I myself would have trusted you in that past, which I have forgotten—which I will not remember!" he added, fiercely.

"But which, while I have life, I shall remember!" she said, faintly, as she raised her head and lifted her great, tragic, solemn eyes to his; and at the intensity of anguish in her glance his angry words ceased, and the fierce gleam died out of his eyes.

"I thank you," she said, in a moment, standing erect again, but steadying herself by the mantle shelf. "I thank you that you have recalled me to my senses, Dr. Carewe. As you say, I am—the affianced—bride of a good man"—she smiled drearily as the words left her lips slowly. "Dr. Carewe, will you not say good night?"

She held out her hand to him with a smile, which was more mournful even than her grief had been. He hesitated a moment, then drew back slightly, and bowed low.

Cecil started; there came into her face a sudden wondering gleam; then her hand fell heavily to her side.

"It does not matter," she said, with proud bitterness in her voice. "Go, Dr. Carewe."

He made no answer—it may be that he could not trust himself to speak; but even his lips were white as she turned away from him with a slow, steady step; and there alone, Lawrence Carewe hid his face in his hands, and these words came from his lips in a broken whisper:

"If I had touched her hand I could not have let her go! I dared not—I dared not!

The next morning, Christmas day, when the guests assembled at breakfast, one among them was missing; and Mrs. Brayburn showed evident vexation at Dr. Carewe's departure.

"He was called away by some very urgent case," she said, referring to his note; is it not provoking?—on Christmas day. I wonder how he will spend it!"

"Ten chances to one he will be coming back," said Ernest, leaving the window where he had been standing, looking at the snow-covered park. "It has been snowing heavily all night, and the snow is several feet deep in places."

"Perhaps you will be a little more gracious to me now, Miss Heriot," said Captain Tyrrell, as he sat down beside her. "It is an ill wind that blows nobody good."

"You—well, you will do very well for a makeshift," said Miss Heriot, saucily; but her eyes contradicted her words, and Captain Tyrrell's appetite was in no way impaired thereby.

Meanwhile, unexpected—and faithful as his servants were, unwished-for—Lawrence Carewe had found his way back home. His cabman's rat-tat at the door had disturbed his servants at their Christmas dinner, and Jackson answered the summons with an irate look upon his face, which changed to an expression of intense surprise when he caught sight of his master.

"I beg pardon, sir," he stammered. "We did not expect you to-day."

"I suppose not," said the doctor, grimly, as he passed into his study, in which, fortunately, there was a good fire, and where he threw himself into an arm-chair in an attitude of weariness, dissatisfaction and languor.

CHAPTER XXVI.

THE WEDDING-DAY.

"Cecil, Madame Rudolph has sent to know which of these two silks you will prefer for your going-away dress? She thinks the lighter of the two is the prettiest."

She turned from the window as her sister entered the room and took the patterns from her hand with a languid indifference which rather puzzled Mattie.

"I do not care," she answered, "tell her to use her own judgment, it does not matter."

"It matters a great deal," Mattie said. "You ought to be anxious to appear well, Cecil. The newspapers will chronicle all the details of the beautiful bride.

"My charms are of the past," she said.

"Oh! foolish child," replied Mattie. "Ernest says you grow more handsome every day."

She put her hand to her face and said drearily, "do you not see the change in me? Ah! you cannot deceive me," she said with a sad smile. "You need not be afraid to hurt me by speaking the truth; it does not matter now how soon my days are ended."

"What do you mean, Cecil?" said Mattie gently. "You are a little paler and thinner, but—"

"A little paler and thinner!" echoed Cecil, with a bitter laugh. "A veritable scarecrow you mean! Look here, Mattie!"

She threw back the sleeve of her dress, and bared her arm.

"It is lucky ball-dresses are not made *decollete* this season," she said. "I am afraid if they were, I should disgrace my—my—husband——"

The word was jerked out as if it cost her an effort.

"But, dear Cecil," said Mattie, gently, "you say you are not ill and you are not unhappy?"

"Unhappy!" repeated Cecil, with a laugh—"unhappy! Why should I be unhappy? I am a very fortunate woman, am I not? I am so happy—so happy!" she went on, clasping her hands, and beginning to pace up and down the room, so happy, that for the last fortnight I cannot eat, or sleep, or rest, thinking of that happiness!"

"Cecil, dear Cecil, you frighten me," said Mattie, gently, at a loss to understand this frantic outburst.

"Frighten you! Well, I frighten myself sometimes," she said, with a laugh. "I wonder if you ever felt so when you were going to marry Edgar, Mattie? Did you sleep well at night, I wonder? or did you spend all the hours pacing up and down the room as I do, until my strength fails, and I fall from very weakness? Did you feel sometimes as if you must scream out loud, or that you would go mad? It is all happiness, you know, but sometimes I have that feeling; it comes up in my throat, and threatens to choke me; and I have to run out of the room, afraid you should notice it. But it is all happiness—all happiness—all happiness, Mattie!"

She fell on her knees beside her sister, and hid her face on her lap, clinging to her with quick, nervous hands, and choking back her sobs with a wild, passionate vehemence, which alarmed Mattie dreadfully.

"But, my darling, if you are not happy it is not too late," she said, gently.

"I tell you that I am happy!" said Cecil, fiercely—"happy as the day is long! How could I be otherwise?"

She sprang up as she spoke, and rushed out of the room, leaving Mattie startled and puzzled at the dreadful agitation she had evinced, and with a vague fear at her heart that something was very wrong with Cecil—a fear which she imparted to Edgar, with tears in her eyes, over his dressing-room fire that evening.

"I dare say she is a little nervous and hysterical," said Edgar, calmly. "It is quite natural, little wife: but I really don't think there is anything else the matter with her. I daresay she feels leaving your uncle, she is so much attached to him."

But Mattie was not satisfied; her quick womanly instinct told her that Cecil was not ill only, but intensely wretched—and she watched her closely.

The wedding, at Mattie's earnest request, was to take place at Thorn Lee. Mr. Edgar had been so kind and cordial that Cecil had acquiesced without difficulty.

"A wedding is always so much prettier in the country," Mattie said. "I hate city weddings—stately, pompous affairs!"

So it was settled that Cecil should be married from Thorn Lee, which was a great old spreading mansion, affording ample accommodation even for the large party of guests who were to be gathered together for the occasion.

The wedding was to be a brilliant one, for was not the bride a reigning beauty, and the bridegroom rich and noble? No trouble, no expense was spared to make it all that it should be in magnificence and splendor, and the wedding was to be preceded by a dance, which was to serve to introduce the guests one to the other, and put them on a friendly footing.—[To be continued.]

TRIPLET MAXIMS.

THREE things to do—think, live and act.

Three things to govern—your temper, tongue and conduct.

Three things to cherish—virtue, goodness and wisdom.

Three things to love—courage, gentleness and affection.

Three things to contend for—honor, country and friends.

Three things to hate—cruelty, arrogance and ingratitude.

Three things to teach—truth, industry and contentment.

Three things to admire—intellect, dignity and gracefulness.

Three things to like—cordiality, goodness and cheerfulness.

Three things to delight in—beauty, frankness and freedom.

Three things to avoid—idleness, loquacity and flippant jesting.

Three things to wish for—health, friends and a contented spirit.

Three things to cultivate—good books, good friends and good humor.

For Women.

CONDUCTED BY MISS RAY CLARK.

THROUGH THE "HOLY DAYS."

DORA GOODALE.

GLAD the light of Christmas comes,
Merry is the Christmas feast,
Through a thousand happy homes,
North and South and West and East;
Blithe the song the traveler sings,
Blithe the wish the reveler says,
Lifting hearts to happier things
Through the Christmas holidays.

Other dear desires were ours,
Few fulfilled and many lost,—
Though we catch, in rarer hours,
That which we have longed for most;
Life hath found a fuller measure,
When we tread forgotten ways,
In the sudden stress of pleasure,
Through the Christmas holidays.

In the future we shall see
Much to promise and forget,—
There are tendencies that be
Which we cannot fathom yet;
Still a song the traveler sings,
Still a toast the reveler says,
Trifling with familiar things
Through the Christmas holidays.

TO FRIENDS!

THE current number being largely devoted to the publication of the yearly index, the following one, the "Corn Number," to that particular subject, necessitates encroachment on the "Literary and Woman's Department;" succeeding issues, however, will be continued as heretofore, with the exception, we hope, of improvement.

In the issue of January 8th, we will give an article on a *Table Spread* with illustrated cut to assist in making, also one on *Window Furnishing—Inexpensive Screens, &c.*

Occasion is here taken to extend thanks to all friends of the RURAL who have shown their interest both in deeds and words.

It is with exceeding regret that we announce the continuance of the story, "Inmates of Lester Hall;" the calculation was to end it before or at the expiration of the year, but it has been impossible to carry out our intentions, owing to a short allowance of space which has at times been unavoidable.

RAY CLARK.

SOME RECOLLECTIONS.

BERTHA A. WINKLER.

My first Christmas-cake—and I vowed it should be my last—had proved a miserable failure. There it stood, lead heavy, at zero in the pan, with my burning face beaming with anger and despair upon it, I concluded in loud thoughts that Christmas caused more worry than cheer to some folks.

"Why, Auntie!" chimed in a childish voice, "its always Tris'mastseer of tourse, sus''magine what's tomin' then! Oh! doodness me!" Here the vision of "doodies and beautiful dings" was contemplated with an exhaustive sigh and I good-naturedly resolved to try again. While the second cake was in vigorous progress and little "hopeful" was skipping around the table in high glee. Some recollections of my own childhood brought before me the vivid contrast of the past and present life, in the old world and the new.

My first Christmas-tree was a mere wisp suspended from the ceiling over the table. A few nuts; a very small fruit-cake; half a dozen gingersnaps; a gaily-colored neckerchief; and a pair of new shoes was all Saint Nicholas brought. And yet, what a world of wealth was mine in the sole possession of that handful! How often I opened the little pine chest for a look at my treasures and counted how many weeks—remember—they might last; though each week lessened the heap considerably. That day, queens on their thrones never felt more royal than I did on the platform of the Sabbath-school, declaiming the chapter of the three wise men of the East, in the full magnificence of my new shoes. But the mills of the gods ground very fast that time, for, just as I felt myself, exulting in the proud smile of parents and teacher I finished with, "and they presented unto him gifts; gold, and—and *a pair of new shoes.*" A confused vision of big words, new shoes, and laughing faces floated before me and later in the day I divided my fruit-cake, the last of my wealth among schoolmates who promised not to tease me about that declamation.

My next Christmas was equally memorable being in the western wilds of the new world with scarce a crumb to eat. Mother said we could not expect Santa Claus to come away out there; he might possibly send a letter and some things in a box. That day and the next the post-office clerk and baggage-master were vainly besieged by two persistent little dutch magpies as the latter, quite out of patience, called Sophy and me. In spite of all, however, that same official found us both standing on the platform in a driving snow-storm as the evening train rushed up to the station. He held the glaring lantern in front of our faces for a moment, then gently hustled us off the platform and as gently promised that if Saint Nicholas' box came he would send his boy with it in the morning. Wide awake in our little trundle bed we talked the matter over; Sophy wisely suggesting that the expected box might not be large enough to hold the tree. Accordingly the early dawn found us, armed with a hatchet, wading through the snow in search of a tree. When mother was receiving the box at the front door, we were tugging the tree in at the back. We crowded around in breathless interest as the box was opened. "Dresses and shoes, I hope," mother murmured. "Dolls, I 'spects," Sophy said. "Books rather," I shouted, as the lid flew open and eager

eyes beheld heavy counter-panes, thick shoes and coarse dresses. All welcome and needed things to be sure, but, oh, such strange gifts for a jolly Saint to send! The big tree which was finally adorned with rosy apples and walnuts, covered with silver paper taken from the necks of old bottles and secured with the wire of an old mouse-trap made quite a fine appearance, especially at night when it was illuminated with little sticks of pine wood.

Since then I have seen all kinds of Christmas ces, but none has ever out-shone or even quailed that pride of our western home. For, had we not exercised our ingenuity and inventive faculty to the utmost? And was it not the object of admiration of every visitor during the following week? And had we not the satisfaction of hearing that every log hut for miles around had an apple and nut-covered tree the ensuing Christmas? It was a cheap but genuine Christmas joy in the depth of the wilderness and the hearts of the humblest backwoods-man.

HOMELY ACCOMPLISHMENTS.

There are a few of the accomplishments prized by our grandmothers which even in those days of machinery, of co-operation, and of luxurious living, we cannot afford to have classed with the lost arts. Among these is the art of plain sewing. In the olden times the sampler and patchwork made girlish fingers early acquainted with the use of the needle, and though no one can care to see those particular industries revived, yet there are few women who do not find sooner or later that in their lives "the needle bears equality with the beautiful craft of the pencil and the mighty power of the pen." Whether it is cheaper or not to buy ready-made under-clothing is not the question. The point insisted on is that every woman should know how to make her own clothing neatly, skillfully and readily. She may add to this knowledge that of embroidery and lace making, just as she may add to a practical knowledge of bread making that of making cake and desserts. There is a great effort made now-a-days to acquire accomplishments comparatively useless and the neglect of those which are of first consequence. The little girl may begin her apprenticeship to the needle by making doll clothes, and as patterns for all manner of lilliputian garments are for sale in pattern stores, she can learn to cut out and put together at the same time. Of course she must have instruction, direction, assistance: to give these is one of the purposes her mother was specially created for. By and by the juvenile seamstress may be promoted, and permitted to exercise her skill on larger garments and later be taught machine sewing. But before this she should master all the mysteries of "over and over" stitch, of hemming, felling, overcasting, catstitch, backstitch, gathering and facing down. Little folks always want to do what they can't do, and a promise of permission to undertake a difficult task will often stimulate a child to do well that which is entirely within its power. Then they should be permitted to enter upon larger undertakings.

Mending is another accomplishment possessed by very few young ladies. This branch of domestic industry is usually relegated to the mother or grandmother of the family where there is a grandmother, and the young ladies play the piano or embroider when they would be more usefully employed in mending. This imposes a great deal of drudgery on the one who has all the mending to do, and releases from what should be a pleasant task, those most able to perform it. No matter how wealthy a young lady is, she should know when her wardrobe is in perfect order and be able to keep it so with her own hands.—Religious Herald.

WHAT TO TEACH OUR DAUGHTERS.

Teach them self-reliance.
Teach them to make bread.
Teach them to make shirts.
Teach them to foot up store bills.
Teach them not to wear false hair.
Teach them to wear thick, warm shoes.
Bring them up in the way they should go.
Teach them how to wash and iron clothes.
Teach them how to make their own dresses.
Teach them that a dollar is only a hundred cents.
Teach them to cook a good meal of victuals.
Teach them how to darn stockings and sew on buttons.
Teach them every day, dry, hard, practical common sense.
Teach them to say No, and mean it; or Yes, and stick to it.
Teach them to wear calico dresses and do it like queens.
Give them a good, substantial common-school education.
Teach them that a good, rosy romp is worth fifty consumptives.
Teach them to regard the morals and not the money of their beaux.
Teach them all the mysteries of the kitchen, the dining room, and the parlor.
Teach them that the more one lives within his income the more he will save.
Teach them to have nothing to do with intemperate and dissolute young men.
Teach them that the further one lives beyond his income the nearer he gets to the poor-house.
Rely on it that upon your teaching depends in a great measure the weal or woe of their after life.
Teach them that a good, steady mechanic is worth a dozen loafers in broadcloth.
Teach them the accomplishments, music, painting, drawing, if you have time and money to do it with.
Teach them that God made them in His own image, and no amount of tight-lacing will improve the model.—The Advance.

Too Much Noise.—A writer in the Journal of Science remarks that noise is a contributor to the tear and wear of modern city life to a very grave degree and wonders why, while a steady war is waged against many other anti-sanitary agencies, no really serious and persistent attempt has been made for the abolition of superfluous sounds. No complete and satisfactory account has yet been given regarding the cause of the injurious effects of sound in excess upon the nervous system. Nervous irritability and cerebral disease appear to keep pace with the multiplication of sounds, especially among thinkers. He proposes, therefore, as a palliative, the absolute prohibition of street music and of church bell ringing, and the prevention of such sounds as proceed from dogs which bark persistently, and from harmonious organs, and wind instruments in general, except in houses which are detached.

ABOUT WOMEN.

Mrs. Hayes has, it is reported, invited Mrs. Garfield to visit her at the White House this winter, in order that she may see something of the responsibilities of the Presidential household before she assumes them.

Miss Anna Dickinson has read her new play, "Aurelian," before a Philadelphia audience, and the Press, at that city, says she had "a most cordial reception, and the closest attention, broken only by applause, was given to her play."

Mrs. Mary Lincoln, the widow of President Lincoln, has returned to the United States. Her stay abroad was extended over three years, with the hope that her health would be improved, but she is in a very feeble condition, and will make her home with her son Robert, in Chicago.

Lucretia Mott died at her home near Philadelphia, on Thursday, Nov. 11, aged eighty-eight. She was buried on the 14th. The body, plainly dressed, was encased in a plain walnut coffin. Appropriate services were held at the house. The body was interred in Fair Hill Grounds according to the rites of the Friends.

Oh, how refreshing, palatable and reviving is a draught of cool water with Hop Bitters in it, to a fever patient.

News of the Week

HOME NEWS.

Monday, Dec. 20, 1880.

Among new bills in Congress are those imposing a duty of at least one and one-half cents per pound on all fresh-water fish called hard fish, and one-half cent on all fresh-water fish called soft fish imported into the United States caught in Canadian waters; providing for a commission of five Representatives, four Senators and five experts to revise and readjust the tariff; repealing the export tax on tobacco, snuff and cigars; making the trade dollar a legal tender; for the prevention and suppression of pleuro-pneumonia; to provide for the regulation of commerce by railroads; proposing a constitutional amendment on the subject of free schools and of election; and to reduce the postage on letters to two cents..... The steamer Cotton Plant, valued at $7,000, belonging to the Old Dominion Steamship Company, was burned on the 11th, while lying at Tarboro, N. C., together with 140 bales of cotton and other merchandise.....A special from New Philadelphia, Ohio, says: "The petrified child of this place, and the wonder of this section, died on Saturday, Dec. 11th. In death as in life the flesh on its body is almost as hard as stone. To the surprise of every one the child lived in this condition nearly a year. The parents, Mr. and Mrs. J. A. Knisely, are in great distress for fear the body of the child will now be stolen. It was deposited in a strong vault, which will be carefully guarded.....Not long since a child escaped from the almshouse at Salem, Mass., and went to work for wages at Saxonville, but the authorities arrested her and sent her back, but the Massachusetts Society for Lost, Stolen or Abused Children has interfered in her behalf, and the city officials of Salem are willing that she should be put at remunerative employment again..... On Sunday the 5th, Ort Hendrickson, residing in Todd county, Minnesota, twelve miles southeast of Wadena, started deer hunting with his brother, and they parted company in the woods two miles from home. In about half an hour three shots were heard, and when the brother reached the spot he found Ort's dead body with three rifle balls in it and a knife plunged to the hilt through the body in various places. The brother followed the trail of the murderers six miles and then lost it. The cause of the crime is unknown.

Elisha Estes, a farmer, was fatally shot by J. W. Alverson, another farmer, near Cascade, Pittsylvania county, Va., for trespassing on the latter's premises on horseback.....It is not believed that anything will be done by Congress regarding the sugar question until after the Christmas holidays.....A resolution requesting the President to invite France to participate in celebrating the Yorktown surrender has been presented in the House.....It is said that a funding bill will be passed by Congress at this session, but it is by no means certain that Secretary Sherman's sugestions will be closely followed

FOREIGN NEWS.

An explosion occurred at the Pen-y-Graig colliery in the Rhondda valley in Wales, and it is believed that between eighty and ninety persons perished. An exploring party discovered sixteen corpses, and search was impeded by the after-damp and debris. The pit is about a mile from the scene of the great explosion in the Dinas colliery in the same valley, January 13, 1878, when sixty persons lost their lives. Later—It is now ascertained that eighty-six of the persons in the pit at the time of the explosion are dead. Two bodies have been recovered thus far and thirty-four more have been seen in the pit..... The arrival of emigrants has decreased since the 1st of November. According to official figures, the number who have arrived here during the last 11 months is 304,248. There were 247 deaths and 140 births on vessels landing steerage passengers at Castle Garden. Germany sent over the largest contingent, as the following figures will show: England, 25,307; Ireland, 56,224; Scotland, 7,472; Wales, 2,495; not specified, 66; Germany, 70,550; Austria, 3,493; Hungary, 4,607; Sweden, 20,183; Norway, 8,286; Denmark, 4,432; Netherlands, 2,592; Belgium, 1,002; Switzerland, 5,493; France, 3,226; Italy, 6,991; Sicily, 1; Greece, 20; Spain, 1,027; Portugal, 17; Russia, 5,925; Poland, 1; Luxemburg, 409; Bohemia, 4,680.....Mr. Gladstone has summoned the members of the British House of Commons to attend Parliament on important business.....There have been upward of 1,200,000 applications for Panama canal shares in Paris since the subscription list was opened..... .....The Pope has conferred on D. J. Murphy, a wealthy merchant of San Francisco, the hereditary title of Marquis, in recognition of his great services to religion in America and Europe..... The St. Petersburg Gaios, supposed to echo the sentiments of the Russian foreign office, insists on energetic and decisive measures in relation to the Chinese question.....Seventeen transports with 9,000 men left Arica on the 15th ultimo to enter upon a campaign against Lima, Peru.

A sad and dramatic eviction took place in county Wicklow on Wednesday. An old man named Arthur Kavanagh, in feeble health, who had a cabin on the property of Earl Fitzwilliam, had fallen behind in his rent. A decree of ejectment was obtained by the earl. His gamekeeper with two bailiffs went to execute the decree. They had to carry Kavanagh out of the house, and as he was crossing the threshold of the cabin the poor old man gave one gasp and died in the gamekeepers' arms. His body was laid by the roadside. Over it for hours sat his only mourner, a granddaughter. Kavanagh was formerly in a good position. He had been unable to work for two years, and was bed-ridden for some time.....The Times' financial says: "The finances of the United States may excite the envy not only of England, but of Europe. The unprecedented rate of redemption is having its natural effect in raising the credit of the United States to a level with the most staid and best paying communities of the Old World. In reaching that level the United States will only attain its rightful position. A country which is so faithful to its engagements, whose resources are so limitless, and whose population increases with such remarkable rapidity, ought to enjoy the best credit accorded to any State. In all probability, should the conditions remain favorable, Secretary Sherman will accomplish his refunding operations at a rate nearer three or four per cent. The very rapidity with which he is able to pay off the debt must aid him most materially by reducing the supply of stock. This, acting *pari passu* with the augmenting demand for sound investments, will give him an incalculable advantage in his operations."

[Des Moines Iowa State Register.]

Hon. S. H. Yoder's Position.

A representative man's opinion on other than political matters, is often of great use to his constituency. The Hon. S. H. Yoder, of Globe Mills, Pa. has thus recorded his opinion on a subject of popular interest. I have been selling St. Jacobs Oil for the last year. I have never heard a person speak of it except as a splendid medicine, and as the great specific for rheumatic affections, whether inflammatory, acute or chronic, swellings, sores, sprains, burns, wounds etc. I sell more St. Jacobs Oil than of any other kind of liniment and it gives universal satisfaction. I will always keep it on hand. The farmers say, that for man and beast, they find nothing to equal it.

AGRICULTURAL NEWS.

While most of the Eastern States have suffered from drought during the past season, the Mississippi Valley seems to have had an unprecedented amount of rain, which the Vicksburg Commercial says aggregates 90.09 inches for the eleven months ending December 1.....The Weatherford (Tex.) Herald says that G. W. Wakefield, a one-armed farmer, is cultivating, unaided, thirty-three acres of corn, eight acres of cotton, one acre of watermelons, and one and a half acres of sweet potatoes.....An Orange County, Fla., gentleman expects to make forty tons of cassava starch this year.....The Constitution of Florida provides that after 1880 the Legislature shall pass a law making an educational qualification for voters..... .....Sheep-raising is said to be the principal industry of Geneva County, Ala.....In Birmingham, Ala., more than 100 houses have been built in six weeks.....In leisure time during the Winter the farmer should go over the orchard and destroy the eggs of the tent caterpillars. They are easily discovered in clusters around the small twigs. Three or four hundred eggs are in one cluster, and its destruction saves the tree from the ravages of as many voracious worms in Spring.....The House Committee on Manufactures has heard the protest of produce merchants against the sale of oleomargarine and other imitations of butter. The manufacturers of oleomargarine are on hand, and there promises to be a regular butter war..... Twenty-seven artesian wells are in Fort Worth, Texas.....The senate has passed a bill providing for the sale of the remainder of the reservation of the confederated Otoe and Missouri tribes of Indians in Nebraska and Kansas to actual settlers of said lands, with the consent of said Indians, the proceeds to be placed to the credit of the tribes, and a new reservation to be selected for them, they desiring to quit their present reservation.....The rate of passage into the interior for emigrants is now so low that a very much larger number of those who come from other countries either have purchased through tickets or do so upon arrival, and it will be much easier for farmers to obtain a supply of willing help than during previous years..... Mr. M. B Hershey, Muscatine, Iowa, has recently imported seventy-three head of Short-horn cattle..... A million and a quarter pounds of honey goes from San Diego County, Cal., this year.....Wood sold on the streets at Fort Worth, Tex., during the snow-storm at $20 a cord.

Distance all Competitors.

The dairyman who uses Gilt-Edge Butter Maker will increase his product 6 per cent., improve its quality 20 per cent., and distance all competitors who do not use it. 25 cents' worth of the powder will increase product and market value of same $3,00. Can you make a better investment? Sold by grocers, druggists and general storekeepers. Send stamp for "Hints to Butter-Makers." Address, Butter Improvement Co., Buffalo, N. Y.

Tropic-Fruit Laxative removes Habitual Costiveness and all kindred complaints. It is composed entirely of concentrated fruits and medicines. Druggists sell it.

Druggists say that Lydia E. Pinkham's Vegetable Compound is the best remedy for female weakness that they ever heard of, for it gives universal satisfaction. Send to Mrs Lydia E. Pinkham, 233 Western Avenue, Lynn, Mass., for pamplets.

A Rare Treat.

The American Publishing Company of Hartford, Ct., (as per advertisement in another column) have in press and will soon issue a new book entitled "*My Wayward Partner*," from the pen of the popular author Josiah Allen's wife, who has heretofore so pleased the public with her spicy books "*My Opinions and Betsey Bobbet's*, and *Samantha at the Centennial*," over which many a hearty laugh has been had. This new volume promises to surpass in many respects her previous works, and we with other readers may expect a rare treat when the volume is out.

Shippers of produce will find the advertisement of Messrs. E. & O Ward in this paper. Their advertisement did not appear in last week's paper, as then stated.

"That medicine goes right to the spot, refreshes, revives and cures."—A patient on Hop Bitters.

Burnett's Cologne received the highest award at the Centennial Exhibition. It is filled in elegant bottles—glass and cork stoppered, and basket covered—and is for sale by all first-class Grocers and Druggists.

The Markets.

SPECIALS FROM THE CHIEF CENTERS

Until Saturday, Dec. 18.

Boston.—Wool.—There has been a large number of mills represented in the market the past week, and manufacturers have looked over the ground carefully for weak places. They generally complain that, at the present price of goods, they cannot afford to pay the recent advance in wool, and that fine fleece must be bought at lower figures. Some small lots, of ten to twenty thousand pounds, of fine Ohio and Pennsylvania have been sold within the past three days at 47c., which is just about a cent below what dealers held their wool at two weeks ago; but the same sellers would not have sold 100,000 pounds lot at that price, as they have confidence that the market for this description will show more firmness after the new year opens and a more active trade sets in. The general tone of the market is strong, and on certain grades of wool no concession would be granted to effect sales, but with a dull trade there will always be a little advantage to a buyer in good credit, and as a good many consignees like to have their consignments closed out at the end of the year, manufacturers have secured some advantage. The sales of fine fleece have been 142,000 pounds, at prices ranging from 47@48c., but the market to day for X and XX Ohio cannot be quoted above 47@47½c., although there is a good deal of wool that could not be bought for these figures. The demand for Michigan has been light, and not enough has been sold to establish quotations. Combing and delaine selections show no change, and there have not been any choice lots of combing sold. Pulled wools are firm, and flannel manufacturers have taken hold quite freely. Butter—The business in this article is confined to supplying the immediate wants of the trade, as no one is disposed to anticipate the future, and most grocers want a fresh article. Stale lots of Northern and Western butter are dull, and there is quite a wide range of prices. We quote fine Northern and Western creameries at 33@35c; early-made do at 28@30c, fine Western dairy made at 25@27c., with one or two brands at a higher price; summer-made Western dairy at 22@24c.; long dairies of Northern butter at 22@26c; Western dairy packed at 20@23c. for choice and 16@18c for common. Cheese—There is a steady demand for small lots for immediate use at 13@13½c for fine Northern, and 13c for Ohio, while fair to good cheese ranges from 11@12½c.

Chicago.—Spring wheat. The trading was very fair, but the amount offered was excessive, and a decline of upward of 1½c was suffered. No. 2 sold for forward delivery at $1.01⅞@1 03 for seller December; $1.02⅝@$1.03⅝ for seller January, and $1.03½@$1.04⅝ for February. December wheat closed at $1.01⅞; January at $1.02⅝, and February at $1.03⅝. Seller March was about 1@1½c, and seller May 6½c over January. Cash wheat sold to a moderate extent as follows: In Store—5,000 bu. and 12 cars No 2 at $1.01⅝ 10,000 bu. at $1 02⅝, 10,000 bu, and 39 cars at $1.02, 5,000 bu. and 37 cars at $1.02⅛, 5,000 bu. and 3 cars at $1 02½; closed at about $1.01⅞; 2 cars No. 3 Spring Central receips at 86½c, 12 cars do. at 87c, 13 cars Iowa and other good houses at 87½c Flour—Buyers appear to be badly demoralized, and the amount sold was insignificant. Prices ranged as follows: Choice and fancy white winter extras, $5.75@$6 25; common to good white winter extras, $5.@$5 50; winter superfines, $3.75@$4.50; good to choice western spring extras, $5@$5.50; low to fair western spring extras, $4@$4 75; choice to fancy Minnesota spring extras, $5 75@$6.50; common to good Minnesota spring extras, $5@$50; poor to fancy Minnesota spring patents, $6@$7 75; low to fancy Minnesota spring patents, $6@$7.75; low to choice spring superfinesg $2.50@$4.; rye flour, $4.85@$5.; buckwheat, $5.35@, $5.50. Corn—Prices for this cereal averaged ½@

¼c lower. The weakness in wheat seemed to bear rather heavily on the market, which was weak and in a legitimate way, slow. Speculators bought to some extent to cover outstanding contracts, but shippers were light buyers, and the legitimate business transacted was limited. For forward delivery No. 2 sold at 39¾@40c for seller December; 39¾@40¼c for seller January. OATS—In sympathy with the drop in wheat and corn, this grain was weak and 3-8@¼c lower, the demand being mainly of a moderate speculative character. RYE—This grain was firm, the offerings being light Seller December was salable at 87½c, and sales were made of seller January at 88½c, and seller February at 89@91c. Cash sales were made of 6 cars of No. 2 at 87½c, besides sales by sample of 2 cars of No. 2 on track at 88½@89½c, and 5 cars of rejected on track at 83@85c. BARLEY—No. 2 was very scarce and an urgent demand caused an advance of 6@7c, followed by the loss of most of the appreciation, No. 2 cash closing at $1.15@$1 17. PROVISIONS—A weaker feeling in the hog market developed more than an ordinary desire to sell, and on mess pork prices averaged about 20c ₮ bbl. lower; on lard 5@7½c ₮ 100 lbs, and on meats 5c ₮ 100 lbs. Speculation was quite moderate while in the line of legitimate business there was no activity to demand any attention. The general trade, in fact, was a little slow. Cash Mess Pork was dull. No sales were made and price closed at $11 65@$11.70 for old and $12.75@$12 80 for new. Option pork sold at $11.80 for seller December; $12 87½@$13 10 for seller January; $13 02½@$13.27½ for seller February, and $13.20@$13 41½ for seller March. January pork closed at $12.92½@$12 95; February at $13 07½@$13 10, and March at $13 25@$13 27½. Cash Lard sold to the extent of 500 tcs. at $8 30, and 500 tcs. at $8.35, closing at $8 32½@$8.35.

BUTTER.—The position of the market remains about the same in all respects as noted in our last report. The stocks are fair and the receipts rather in excess of the demand, and stocks are slowly on the increase. There is a moderate business in all fresh-made stock, and prices are steady, but old stock is in liberal supply, exceedingly slow, and prices weak. Shippers are doing very little, and about the only inquiry is for supply of the local retail trade, and to meet a few orders from outside points. We once more quote: Choice to fancy creamery 32@33c, ₮ lb; fair to good do 28@30 fine to fancy dairy 25@28c; good to choice dairy 22@24; medium to fair dairy, in shipping lots, 18@20c; ladle-packed, good to choice, 19@21c; fair to the best packing stock 14@16c; grease butter 8@10c. Fair to choice roll butter sells at 16@20c.

Obstructions of the kidneys and attendant organs will prove fatal if not removed by Hop Bitters.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Dec. 18, 1880.

BEANS AND PEAS.—Supplies of beans arrive heavily, but as yet have made no impression upon prices; for that matter strictly choice mediums are very firm. Green peas plenty and dull at $1.70@1,75. Southern B. E. peas quiet at $2 ₮ 2-bush. bag.

Marrow beans choice $1.90, do, other $1.75@1,82½, medium choice $1.72½@1 75, do. other $1.60@1.70, pea $1.60@1 80 white kidney $1.85@2, red do. choice $1.75@1.80, do. other $1.60@1.65, black $1.60@1.65, lima $4@5.

BUTTER—With the strong prices that are ruling buyers are very fastidious and best marks of any style are subject to close scrutiny before trading occurs. There are few straight upper grades in market and many creamery buyers have left that line for selected half tubs. State dairies have an easier tone and all under grades are rather pressed for sale. Western butter is not up to a good standard: best dairy hangs at the high price and factory is lower.

Creamery, Western choice 35@36c, fair to prime, 20@34c State poor to best 22@33c.; sweet cream :8@32c.; State dairies, entire choice, 26@; fair to prime, 28@30c.; firkins, 18@25c; pails and half tubs, choice 28@29c.; fair to prime, 25@27c.; poor, 18@22c.; Welsh tubs, fresh 26@27c; other 18@24c.; Western imitation creamery, 24@26c.; dairy, choice, 25@26c., fair to prime, 21@25c; poor 16@18c.; factory, late made 21@22c.; common to prime 15@20c.; rolls choice, 22@23c.; other, 20@21c.

Receipts for the week, 29,563 pkgs. Exports for the week, 3,418 pkgs.

CHEESE—The market has tended stronger this week, making a gain of about ½c, and closed firm on a better demand for export and more moderate receipts. The shipments of the week have been 35,700 boxes. Quotations are for

State factory, fancy, at 13@13½c.; do. good and prime, 12½@12¾c.; do. fair to good, at 11½@12½c.; do. half skimmed, 8¾@10c.; Wisconsin factory, fine, 12½@12¾c do. good to prime, 11¾@12½c.; do. fair to good, 10¾@11¾c.; Ohio factory, fine, 12½@12¾c.; do. good to prime, 11¾@12½c.; do. flat, fair to good, 10@11¾c; do. poor to fair 7@10c.

Receipts for week, 40 346 boxes.

Exports for week, 35 493 boxes.

Liverpool cable price, 65s.

Steam for dairy produce to Gt. Britain 35@40s.

COTTON—The market has ruled weak and only moderately active. Latest prices are for

December at 11 84@11.86c.; January at 11.98@11.99c.; February at 12,16@12,17c.; March at 12.34@12 35c.; April at 12,48@12.49c.; May at 12.60@12.61c.; June at 12.71@12.72c; July at 12.79@12.81c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

DRIED FRUITS.—Apples have had little attention, prices being above buyers' views. Peaches meet with a fair demand and rule firm. Small fruits are generally at strong prices. Quotations are for

Evaporated apples at 8¾@9¾c. for better qualities; sliced apples at 5@6¼c. for good to choice North Carolina; 3¾@4¼c. for Va. apples, 4@4¼c. for Tenn. do; 4¾@5¾c for State do; 3¾@4¼c. for western Ohio and Mich. Peaches at 2¾@3c. for evaporated peeled; 11¾@13c. for unpeeled do.; N. C peeled at 20@21c.; for the better qualities, unpeeled peaches at 6¾@7¾c. for halves and 6¾@7c. for quarters. Plums at 15@16c. Blackberries at 8c. Cherries at 8c. Raspberries at 25c. Whortleberries at 12@12¾c.

EGGS.—Receipts for the week, 15,179 bbls.; do last week 5,345 do. Prices for fresh are restrictively nigh and the light supply is not sought for so eagerly. Stored fresh are quiet, limed are firm and active when quality is right.

N. J. and near points 34@35, State and Pa. 31@32, Western fresh 30@31, Southern 30@32, stored 27@28, limed State 21½@22½, do. Canadian 20@22, Western 20@21¾.

FLOUR—Has sympathized with wheat and it has been possible to sell only by making concessions.

Latest prices are: $5.30@5.60 for very inferior to fancy superfine State and Western; $4,30@4 75 for poor to choice extra State and Western, odd lots and lines; $4.75@5 00 for choice to fancy do.; inferior to good whites wheat, trade and family extras, $5 60@5 80; good to choice do. at $5.10@6.25; (fancy do. up to $6.75;) red and amber winter wheat inferior to choice trade and family, at $4 60@6 00; round hoop Ohio $4.60 5 00; mixed trade and family brands of do at $5.00@6.50, the latter for fancy; St. Louis at $4.25@5.50 for inferior to good extra; $5.50@6.50 for good to choice and $6.50@6.75 for choice to fancy brands; Minnesota clear, inferior to very choice at $4,60@6.00; Minnesota "straight," poor to fancy, at $5 60@7.25, and patent inferior to fancy at $5.75@8.50; city mill extra at $5.50@5.65 for fair to very choice for the West Indies; do. for England, $4 50@6 for poor to very choice spring wheat, and $4.90@5.15 for winter wheat product; do. trade and family extras, $5.75@7; do. for South America, $5.65@6.00; the latter for fancy; No. 2 at $3@3 65 for inferior to strictly fancy.

Receipts for week, flour, bbls. 180,950; corn meal, do. 2,000; wheat, bush. 575,000; corn, do. 367,514; oats do. 175,000; rye, do. 13,436; malt, do. 55 200; barley, do. 62,450; beans, do., 13,284; rice, pkgs 2,313.

Exports for week, flour, bbls. 100,500; corn meal, do. 3,531; wheat, bush 758,079; corn, do. 204 941; oats, do, 3,115; peas, do. 3,436; beans, pkgs. 752; rice, 385.

BUCKWHEAT—Quoted at 57@59, and buckwheat flour at $2.20@2,45.

FRESH FRUITS—Exports of apples for week 10,351 bbls. The market for apples is strong, but only for well-protected stock. Receipts are discouraged as railroad stock varies so in price.

Baldwins $1.87@2; Greenings, $1.75; Northern Spy $1.50@1 75; Spitzenbergs, $2@2,25 Lady apples, choice, $1@8; other, $3@5; sweet apples firm for market brands. Cranberries quiet at the moment, Cape Cod fancy bbls., $7.50; poor to choice, $4@7. N. J., boxes $1.50@2. Florida oranges very dull stock lacking its usual attractive quality. Choice half bbl. boxes, $3.25@3.50; fair to good, $2 50@3. Boston pears nominally $4@6. Catawba grapes 5@6c. ₥, cases or bulk. Peanuts in fair demand. Va. hand-picked 4½@5, other, 3½@4¼, shelled 4@4¼. Hickorynuts ₮ bush. of 50 lbs, $1.75. Western butternuts 60@70. Black walnuts 50c. Pecans 9@9½c.

FURS AND SKINS—The tendency of the market for domestic skins is low, as the catch will be heavier than usual according to country reports. Skunk, mink and muskrat will be most affected.

GRAIN.—The visible supply of wheat this week has increased to 1,701 000 bush, and the arrivals at all western centers show a marked increase; consequently prices have declined. Exporters have taken about 800 000 bush. The latest prices are for

No. 1 white at $1 17½@1.18 do. December at $1.17¼@1.17½, do January at $1.18@1.18¼, do. February at $1.20½@1.20¾, ungraded white at $1.03@1.20, mixed Winter at $1.17¼, No. 1 red at $1.25@1.28, No. 2 red at $1 19¼@1.20¾, do. December at $1.19¼@1.19¾, do. January option at $1.20¼@1.21¼, do. February at $1.22¾@1.23¼, do. May at $1.24¼@1.24½, No. 3 red in lots at $1.16¾@1 17¼, ungraded red at $1.06@1.25, No. 3 Spring at $1.14@1.14½, ungraded Spring at $1.06.

Corn has been freely offered at lower prices; shipments for the week 403,011 bush; latest prices are for

New York No. 2 at 57¾@58¼, do. December at 58¼@58¾, do. January at 58¼@59, do. February at 59¼@59¾, ungraded mixed Western at 55@58¼, No. 3 55¾@56¾, New York steamer mixed at 56¾@57, No. 2 white at 58¼@58¾, yellow Western at 57½@58, white Western at 58, steamer white at 57.

Oats are also lower and in fair demand; latest sales are of

No 1 white 47½, New York No. 2 white at 44¾@45, No. 3 white at 43@43¾, New York No. 1 at 44, New York No. 2 at 43¾@44, do. January at 41¾@41¾, do. February at 45½@45¾, No. 3 at 42¾@43, ungraded white Western at 43@47, ungraded mixed Western at 40@44, white state at 49, No. 2 Chicago quoted at 43¾, No. 2 February at 44¼@45½.

HAY AND STRAW.—Supplies are very fair with prices scarcely as strong. Demand is moderately active. Latest prices are for

Selected retail State hay $1.25@1.65 per 100 lbs other grades of timothy at $1,20@1.25 do, grades for railway and shipping wants at $1.10, clover mixed at $1.10@1.15, clover clear at $1@1.05, salt hay at 70@75c. Straw—long rye, $1.10@1.15, short rye, oat, wheat and barley 70@85.

Exports for the week 1,107 bales.

HONEY.—The market is disappointingly dull for the approach to the holidays.

White clover, comb, single, 17@18c.; larger pkgs. do. 15@16c.; buckwheat 12@13c.; extracted 7@11c. as to color.

HOPS.—There is very little interest shown by exporters and the home demand is moderate, with prices generally unchanged. Quotations are for

	Cents per lb.
New Yorks, crop 1880, prime and choice	22 @23
Do. medium	19 @20
New Yorks, crop 1880, low to fair	16 @18
Eastern, crop 1880	18 @22
Wisconsin, crop 1880	18 @22
Yearlings, crop 1879, choice	14 @20
Olds, all growths	4 @12
Bavarians	30 @35
Bohemians	35 @40
Pacific coast, new	20 @24

LEATHER.—Hemlock sole quoted 22½@24 for light, 23½@25 for middle, 23½@25 for heavy and 21@22½ for good damaged.

OIL CAKE.—Western is quoted at $30.50 per ton.

POULTRY AND GAME.—The market has had an unsteady run; quality has turned out very irregular in lots of remote shipment. Each day has shown a surplus and even bright fresh stock has suffered some in quotations in consequence. It is hoped next week will clear the market and leave it in better shape.

Turkeys, N. J. choice, 11¾@12, State do. 11@11½, good to prime 10@10¾, Western, choice, 10@11, good to prime 9@10, fair to good 8@9. Phila., dry-picked, 11@13, Chickens do. 12@13. Bucks Co. 10@12, N. J. 9@11c.; State scalded, 8@10c.; Western, do., 8@9c.; good to fair 5@7. Fowls, Phila. dry-picked, 10. N. J., 9@10, scalded, do, 8@9; State and Western prime, 7@8; poor to fair 5@6, Ducks, choice 12@13 other 7@10. Geese, choice 10@11; other, 7@9. Squabs, light ₮ doz. $1.75@2 dark $1@1,25. Mixed lot of Chickens and fowls, Western, 5@8.

Supplies of live are light, but little is wanted in the way of fowls or turkeys

Fowls and chickens 6@8, roosters 3@4, turkeys 7@9, Ducks choice 6@7c, other 40@50. Geese extra $1, 87 other 80@$1 02 Pigeons 20@25,

The market is well supplied with game of all kinds and the demand is growing to be active with the present popular prices. Rabbits extremely low.

Wild ducks, canvas back $1.50@2, red heads, 75@87, mallard 60, teal, 40@50; common 20@30; quail prime trapped ₮ doz $1,12@1 25, poor 20@31, partridge, 60@80, the latter for State. Grouse prime $1@1.15, drawn 80@90, Hares, 25@30, Rabbits, 10@20, Venison, Minn. short saddle, 13, other 10@12 Whole deer, 8@9. Dressed saddles of venison do not meet with favor here; some from St. Louis brought only 7@9.

PROVISIONS.—Hog products have been fairly active and prices weak.

Mess pork is quoted $13 for spot lots, $13 75 bid and $14.40 asked for Jan. and $13.90 bid and $14.30 asked for Feb. Bacon at 7¼ for long clear, and 7¾ for short clear. Lard, Western steam at $8.90 for spot and December, $8.92½ for January, $9 01@9.05 for February and $9.12½@9.15 for March. Stearine at 9 for choice. Tallow at 6¾@6¾. Beef hams at $16.50@17. Beef at $18@20 for city India mess, $9.50 for extra mess, $8 50 for plain mess.

Receipts for week, beef, bbls. and tcs.; 1,154; pork, 5,698 bbls.; cut meats, 35,500 pkgs.; lard, 32,224 pkgs.

Exports for week, beef, bbls. and tcs. 2,700; pork, 5,375 bbls.; cutmeats, 13,539,483 lbs.; lard, 5,770,600 lbs.

SEED.—Clover is firmer on small receipts and a better demand. Western is quoted 8@8¾ and extra choice at 8 49¾. Timothy is quiet at $2.7.@2,45,

TOBACCO.—There has been a quiet and steady market. Quotations unchanged.

VEGETABLES.—Exports of potatoes for week, 5,100 bbls. Small potatoes sold at 180 lbs. to the bbl. The supply is larger and outside prices are not so readily obtained, still choice well-kept and packed lots are not pushed on the market. Other items fairly firm when free from frost.

Potatoes, in close Eastern double heads $2@2 25 State, $1 75@2. do. in bulk $1.62½@1.87; Burbank and prolific $1.75@1,87; snowflake $1.62½@1 81; peerless, $1.37½@1.75; peachblows $2@2.25 Sweet Del. $2.50@3 Onions, white, $5@5.50 yellow, $3.25@3.50; red, $3.25@3,50; Chester, $3.25; carrots, $1.25@1.50; marrow squash, 40@50. Hubbard, 75c.@$1; cauliflower, $2@5; cabbage, ₮ 100, $4@6; red, do. $1@7 pumpkins, $3@5; celery, ₮ dozen, $1.00@1.60; turnips, white, ₮ bbl. 50@75, Russia 50@75.

WOOL.—There is a very fair demand and a steady market without further change in prices. Quotations are for

Ohio, Penn., and W. Va. XXX and picklock 49@51, XX, 48@49c.; X 47½@49c.; No. 1 49@51c.; No. 2 44@47c.; common 40@43c.; combing and delaine 49@53c.

Mich, Ind. and Wis. X and XX 43½@46c.; No. 1 47@48c.; No. 2 and common 40@44c.; combing and delaine 47@52c.

N. Y. N. H. and Vt. X and XX 40@43c.; No. 1 45@47c.; No. 2 and common 38@42c.; combing and delaine 45@51c.

Iowa, Ill. and Western X and XX 40@43c.; No. 1 45@47c.; No. 2 and common 38@42c.; combing 44@49c.

LIVE STOCK MARKETS

NEW YORK, Saturday, Dec. 18, 1880.

BEEVES.—Receipts for the week 9,747 head; do last week 10 510 do. The week preceding Christmas has been seldom so liberally supplied with fancy steers. Both Wednesday and yesterday showed that special feeding had become a thing of the past, for it was predicted this Fall that no heavy high-fed lots would appear this season. Exporters and first-class butchers have had all they wanted in the way of show beef and have paid good compensating prices. The general market was strong under the small total. Prices ¼c. higher at all the yards. About 400 head sold yesterday at 11@12c. and above. Rough State Michigan oxen and stags 6¾@7 to dress 54@55 lbs; similar Kentuckys 7¾; poor State cattle 7¾@7¾; common to choice 8¼@11¼ to dress 55@57 lbs; extra and premium steers 11¾@13. With the style of stock of the week classification is somewhat special.

COWS AND CALVES.—Market regarded fair for the season; stock selling at full old ranges.

SHEEP AND LAMBS.—Receipts for week, 25,083 head; do. last week 21,903 do. Supplies have been very short and prices for all decent stock have ruled firm. Coarse ewes sold at 4@4¼, good to choice sheep 6¼@6¾; lambs 5½@7.

SWINE.—Receipts for the week, 34,133 head; do. last week 35 481 do. Market dull, as dressed pork furnishes a good portion of the city cutting trade.

Live hogs, corn, $4.50@4 75 per 100, country dressed pork light 7, medium 6¾@6¾, heavy 6¼@6¾, city dressed State 5¾@6¾, city dressed Western 5¾@6, Western dressed 5¼@5¾. Pork tenderloins 10¾.

VEAL CALVES.—Live calves are somewhat scarce and prime are very firm. Common live are slow, as retail butchers have a good offering of dressed to draw upon. Market steady for dressed.

Live calves, N. J. prime 7¼, State, prime 7, poor to good 5@6¼, Mt. Holly, heavy, 4@5, medium to light 6@7¼, buttermilk, 2½@3, grassers, 2@2¼c.; dressed choice 9¾@10, fair to prime 7¼@9, common 3@5.

THE
Ladies' Floral Cabinet
AND
PICTORIAL HOME COMPANION.
The Handsomest Illustrated Journal of Household Art, Flowers, and Home Literature in America.
PUBLISHED MONTHLY.
A large 16 page finely illustrated Monthly Journal.
Eight pages are devoted to *Practical Floriculture*, and the remaining eight to short stories, spicy selections, and household topics of general interest. A choice selection of music is given with each No. To each subscriber is given a rare premium. (*Send for premium list.*) See what "The Christian at Work" says of it:
A GEM OF A JOURNAL.
"Since the *Floral Cabinet* has entered on a new career in the hands of the present publishers, with a radical revolution in its editorial management, it has rapidly risen in public favor, and has enjoyed a largely increased circulation, as it richly deserves. The *Floral Cabinet* is one of the best guides to flower culture and home adornment. It tells all about flowers and everything that is akin to flowers, and shows the difference between management and mismanagement. With the aid of the *Floral Cabinet* any lady may easily make her home beautiful. The use of exactly such a publication as this among the young people of a family leads to refinement of taste, and to an acquaintance with all that makes home happy. The *Cabinet* is full of sunshine from beginning to end, rich with original contributions both in prose and poetry, and elegant with choice woodcuts made expressly for its pages by most eminent artists. Its price is only a dollar and a quarter a year, with premiums enough in the way of valuable seeds to set up a garden or conservatory. No home ought to be without the monthly visits of the *Floral Cabinet*."
The above is only one of many notices of the same character.

Reading for the Young.

GOOD GRAMMAR.

THREE little words you often see
Are articles—a, an and the.

A noun's the name of anything,
As school or garden, hoop or swing.

Adjectives tell what kind of noun,
As great, small, white or brown.

Instead of nouns the pronouns stand—
Her head, his face, your arm, my hand.

Verbs tell of something to be done—
To read, count, sing, laugh, jump, run.

How things are done the adverbs tell,
As slowly, quickly, ill or well.

Conjunctions join the words together,
As men and women, wind r weather.

The prepositions stand before
A noun, as of or through a door.

The interjections show surprise,
As ah! how pretty—oh! how wise.

The whole are called nine parts of speech,
Which reading, writing, speaking teach.

CHRISTMAS.

ESTELLE.

CHRISTMAS! What a magic word, and how closely it is connected, in the eyes of little folks, with Christmas trees and bountiful feasts of good things! How, even in their dreams, dolls, small Saratogas containing their wardrobes, little cook stoves, kitchens, sets of dishes, drums, tin engines ferry-boats, knives, skates, and all the many beautiful playthings float like a panorama before their eyes.

How the excitement of the little ones carries me back to a time in my childhood, when poor mamma had her hands full to find bread and shelter for my two younger brothers and myself. As Christmas drew near our talk was of little else but a tree, would we have one, or not?

We had a dim idea that this was different from our other Christmases, before the cruel war killed papa, but whether we were too poor to have a Christmas tree was a problem we were unable to solve, but which troubled us greatly. Mamma's eyes would fill with tears, and she would look so sad whenever she heard us talk; and once, when we ventured to ask her if she thought Santa Claus would remember us if we tried to be good, even though we were poor, she sobbed right out, as if her heart would break, but soon controlled herself, wiped away the tears, and for our sakes smiled and looked pleasant.

At last the eventful night came, and we were in a quandary as to whether we had better hang up our stockings. The boys were for hanging them up, but I, feeling the weight of my three senior years, thought we had better not, as Santa Claus forgot all about children when they became poor, and it might make mamma feel bad and cry again. But she, seeing our trouble, told us to hang them up. It wouldn't do any harm, and we might get something if we didn't make any noise but went to sleep early. So, after our prayers were said and we were tucked up warmly in our beds, she kissed and left us.

It was hardly light, Christmas morning, when I awoke, quickly jumping up I awoke my brothers, and we three in night-dress and bare feet made our way to where we had hung our stockings. They looked as if they were full for a bundle was sticking out of the top of each. On seeing them, we uttered an exclamation of joy, which was turned to one of bitter disappointment, as we found on taking hold of them, that they were nearly empty, only containing a few candies and an odd-looking bundle, which proved to be a doughnut doll-baby, with queerly-proportioned arms and legs. In my heart I had really thought Santa Claus would not forget us, and now the disappointment was so bitter, that I threw the doughnut baby on the floor, breaking one of its arms.

"Stella!" It was mamma's voice, as I looked in her face I knew she had seen me, and felt sorry about it. In a fit of remorse I ran to her arms and had a good cry; when my sobs had ceased, she said, "go and raise that curtain in the corner." I obeyed, and could we believe our eyes, there stood a tree loaded with beautiful toys, besides a number of boxes on the table.

With eyes bright with pleasure, we stood fascinated by the bright scene until aroused by a hearty voice, saying, "why don't you take them off?" Turning around, we beheld a man in the dress of an officer of the navy. Seeing we did not recognize him, he said, "come here, little folks, and kiss your uncle;" after which proceeding, he unloaded the tree.

Such a lot of presents from Uncle Will, then there was a present for each of us from mamma. Mine was a little toy cooking stove, with all the apparatus for cooking. How that stove had haunted my dreams both waking and sleeping, for a long time, and how many times when on my way to and from school, and when sent by mamma on errands, I had gone out of my way to go by the stove and gaze in the window that contained it. And now it was really mine. I was afraid I would awake and find it all a dream.

Little did we then know how poor mamma had worked early and late to get our presents; but we soon learned how Uncle Will, mamma's brother, came after we had been put to bed, and frightened her very much, as she thought he had been killed in the war. He did not forget mamma's Christmas, but gave her our old home, where we used to live when papa was alive. And now we are living there and are so happy. Among the relics of my childhood none are so dearly prized, as that little stove, and a one armed doughnut doll

LETTER FRON HONOLULU.

DEAR UNCLE MARK:—I fear you will think that Hawaii nei has forgotten you altogether; far from it. I often think of you all and have started several letters to you, but writing to ones' friends and to a paper are two different things. I write so rapidly and carelessly, that I have to go over my composition, correct it and rewrite, and it takes time, and with me just at present it is a scarce article. Last July my parents left me for a visit to California to see if papa would derive any benefit from a change of climate. After a four months trial he was thoroughly examined by one of the best doctors, Dr. Cole, and his statement is, pulmonary consumption, both lungs affected. A mild climate and no more medicine is prescribed. This week I received news of their home-coming, and by friends I am told to prepare myself for a great change in my dear father's appearance. And loving him as I do it is hard to think that the time may soon come when I shall no more have a father, but though he be taken, a Heavenly Father remains. He is about to send me the severest trial I have ever known. I have murmured against it but now I feel that God knows best and He will be sure to comfort us; so now my whole aim is to make our truly beautiful home as lovely as possible.

I have been housekeeper for my cousin, my adopted sister and a young married couple, friends of ours, for four months, no! the young couple have only been here two months, still I have been busy, very busy all along with a large home like ours, and I alone at its head to direct. It is no easy task and I am glad to so soon welcome home my loved ones. So you see, Uncle Mark, my time has been fully occupied and I know you will forgive my silence.

And now allow me to thank you for the seeds you kindly sent me. I planted them all with such care and some bloomed so nicely; then I was very sick and my plants were neglected. I felt so sorry to find some dead whilst others I have petted back to life. If any seeds are sent to me next year I hope to have better success.

I intended to have sent you an autograph of our King's this time, but I have not found time to pay him a visit, and several of my young lady friends are waiting patiently with their albums for his autograph.

I have just written a long letter to L. L. Lewis, a Rural cousin and a very interesting correspondent. I also correspond with Rachel E. Moore and enjoy her letters. I await one by the next mail.

And now my final paragraph and the real cause of my writing to you. Our great wonder, the volcano, is giving us a grand break-out, the first since '68. It is impossible for me to attempt a description so I have asked my cousin to try and procure a paper and mail it to you, and you will find a splendid description as witnessed by a gentleman of our acquaintance; the sight must be grand, and I hope if possible to visit it.

My parents were on Hawaii in '68 and mamma says she never wishes to go through another time like that. They could not get away for the schooners could not get to land, and besides papa was the sole manager of a plantation and not another white person within twelve miles. Not a blade of grass, not a drop of water but what was brought by the natives from the mountain three miles away. The sun was like blood, and for days sometimes it was not to be seen on account of the dense smoke. For months they slept in the open air and could feel the ground surging under them and all was so hot. Earthquakes, too numerous to count. Cattle that had been wild became tame. The trees waved and snapped like whips, stone walls fell everywhere. It was a fearful time. All this time I was in a convent boarding school and received no home letters, and wondered and fretted at my parents' silence. This eruption does not seem to be accompanied by earthquakes, drought, etc., and yet the sight is grander than any previous. Hoping Uncle Mark and the cousins will enjoy the perusal of this letter and also the paper, and with best wishes for a Merry Christmas and Happy New Year, Hawaii nei bids good night. FRANCES M. LACK.

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK:—I wish to thank you for those seeds which you so kindly sent me. They all came up nicely. The china pinks were beautiful, as was also the phlox; my favorite phlox was a pale pink one. The cockscomb was something new, being variegated, buff and crimson. We had good success with the RURAL seeds. We were all very much pleased with the beautiful flowers of the Lemon Hollyhock, which we received in 1879. I have an Oleander four years old, and eight feet high, it was full of flowers from May till September, there are three seed pods on it at present, and is getting more. Do they often get seed? I have never heard of it before. The muskmelon seed all came up, but did not do as well as they might on account of not having much rain. I had one nice large one of which I saved all the seed. Uncle Mark, can you tell me which is the best method of treating the Calla lily; so that it will bloom during the winter.

Your affectionate niece,

Wayne Co., O. ANNA CROUSE.

[It is not common for the Oleander to have seed pods in this climate. The Oleander is easily propagated by putting cuttings into a bottle of water where they form roots in a few weeks. You are aware that the Oleander is very poisonous and that none should ever put the leaves or flowers in the mouth. The Calla lily requires thorough drainage, yet frequent waterings. U. M.

DEAR UNCLE MARK:—Please add my name to the Horticultural Club. We have a great many house plants this winter, among them an Oleander, several different kinds of geraniums, both sweet-scented and other kinds, an Oxalis that is always in bloom, fuchias, a double rose petunia, callas and others. We had about 40 different kinds of roses last summer, and a balsam that came up self-sown in our rose bed, and grew to be a beautiful shaped tree about three feet high and over eight feet in circumference, and it was a perfect beauty when covered with nearly all white blossoms with a little sprinkling of red.

Love to all, ESTELLA B. HUNTER.

Hartford Co., Conn.

DEAR UNCLE MARK:—I am a little girl nine years old, my pa has taken the RURAL a good many years and I like to read the letters from the cousins very much and I would like to join the horticultural club for I am very fond of flowers. I live on a farm and my pa keeps horses and colts and cows and pigs and poultry and I like to help him take care of them. I can unharness a horse and tie him in his stall and feed him and my pa sometimes calls me a Tom Boy, but I do like to be out of doors and among the flowers and in the fields, and I drive the cows to and from the pastures.

From your little nicce,

Schenectady Co., N. Y. ALICE CONDE.

The Literary Revolution.

Victories are won every day. In January, 1879, "The Literary Revolution" was inaugurated by the publication of one small volume. At present, its list, published and in preparation, comprises nearly 175 volumes of standard books. It gives employment to about 500 hands, and now has facilities for delivering to purchasers over five tons of books a day. To meet the popular demand for the coming twelve months at least **2,000,000** and probably **3,000,000** volumes will be required. The almost wonderful success which the "Revolution" has achieved is, doubtless, to be attributed to its leading principles, which are:

I. Publish only books of real merit.

II. What is worth reading is worth preserving—all books are neatly and strongly bound.

III. Work on the basis of the present cost of making books, which is very much less than it was a few years ago.

IV. Books have commonly been considered luxuries; in a free republic they ought to be considered necessities, and the masses will buy good books by the million if prices are placed within their reach.

V. To make $1 and a friend is better than to make $5 only, and 1000 books sold at a profit of $1 each give a profit of only $1000, while 1,000,000 books sold at a profit of 1 cent each give a profit of $10,000; and it is more pleasure as well as more profit to sell the million.

LIBRARY OF
UNIVERSAL KNOWLEDGE.

Large Type Edition. A verbatim reprint of the last (1880) London edition of Chambers's Encyclopædia, with copious additions (about 15,000 topics) by American editors; the whole combined under one alphabetical arrangement, with such illustrations as are necessary to elucidate the text. Printed from new electrotype plates, brevier type, on superior paper, and bound in fifteen elegant octavo volumes of about 900 pages each. It will contain, complete, about 10 per cent more than Appleton's, and 20 per cent more than Johnson's Cyclopædias, and, though in all respects important to the general reader it is far superior to either of them, its cost is but a fraction of their price. Volumes I. to VI. are now ready, and other volumes will follow, at least two each month, the entire work being completed by April, 1881, and probably sooner. Price, per volume, in cloth, **$1.00**; in half Russia, gilt top, **$1.50**; postage per volume, 21 cents.

AN AMAZING OFFER.

It has been our custom in previous publications to offer special inducements to those whose orders are soonest received. In pursuance of that policy, **on or before December 31 only**, we will receive orders, with cash, for the set of 15 volumes complete, for the nominal price of **$11.00** for the edition in cloth, and **$16.50** for the edition in half Russia, gilt top. The price during January will be advanced to **$11.50** and **$17.25**, and a further advance will be made each month till the work is completed. Volumes will be shipped as may be directed, as soon as they are issued, or when the set is complete.

Chambers's Encyclopædia.

As a portion of the Library of Universal Knowledge, we issue Chambers's Encyclopædia separately, without the American additions, complete in 15 volumes 16mo. In this style it is printed from new electrotype plates made from very clear nonpareil type. Price, Acme edition, cloth, **$7.50**; Aldus edition (finer, heavier paper, wide margins), half Russia, gilt top, **$15**. In this style it is now complete and being delivered to purchasers.

What is the Verdict?

Anybody can afford to own a cyclopædia now.—*Press*, Ellenville, N. Y.

We can only repeat our hearty commendation of a scheme which places in the hands of the people the best literature at a merely nominal price.—*Traveler*, Boston.

The day of cheap and good books is once more with us, and the American Book Exchange merits the praise for it.—*Episcopal Register*, Philadelphia, Penn.

Has some rich relative left you a colossal fortune which you are spending in publishing books for the people at nominal prices? If so, I admire your taste. But won't the old-line publishers be glad when it is gone!—B. F. CONGDON, Randolph, N. Y.

At these rates any man may, and every man should, have a library.—*The Alliance*, Chicago, Ill.

[illegible] wonders in book-making. A few dollars will purchase a good library. We pronounce them the best [illegible] the money that ever came to our notice.—*The Watchman*, Boston.

[illegible] matter of wonder how such books, in firm binding with good paper and good type, can be offered at such a price.—*The Standard*, Chicago, Ill.

It is a mystery which we will not attempt to explain how the American Book Exchange can afford to publish such a remarkably cheap series of books. Other publishers may be inclined to sneer at them, but so long as the Exchange publishes a book at one-tenth the cost at which it is offered elsewhere, sneers cannot hurt them.—*Courier-Journal*, Louisville, Ky.

We have heretofore given generous notices of this work, because we believe we are doing a favor to our readers in so doing.—*Herald*, Utica, Ohio.

It entirely obliterates the excuse offered by many who really want a good encyclopædia, but are unable to get one of the expensive editions. Quite a number of our readers are subscribers for it, and express themselves highly pleased.—*Times*, Cochranton, Penn.

We know of no publication of recent date that deserves so large a share of public encouragement as this one.—*Sunday Chronicle*, Washington, D. C.

The American Book Exchange is doing a very remarkable work in the reproduction of standard books at absurdly low prices.—*Journal*, Boston.

The character of this marvelously low work is too well known to need much elaboration of its merits.—*Telegraph*, Pittsburgh.

They are well printed and bound. Their form is vastly more convenient than the usual unwieldy quarto or octavo, and their price is cheap beyond all precedent in book-making.—*Sunday Capital*, Columbus, Ohio.

It has been prepared with the greatest diligence and skill, and the literary graces which have been lavished upon it makes its longer articles pleasant as well as thoroughly instructive and trustworthy studies. Nothing seems to have been omitted, and especially in the scientific, biographical, and historical articles, everything is brought up to the very latest date. Chambers's, in fact, is the cheapest, the most complete, and in all senses the best encyclopædia.—*Saturday Night*, Cincinnati, 1880.

It has given me great pleasure to recommend your noble enterprise throughout Virginia. Your names will have to stand with those of Howard, Cobden, Nightingale, Morse, Fulton, and Edison, as reformers of the nineteenth century.—R. S. BARNETT, Richmond, Va.

The books are received. I am well pleased with them. Your company is worth more to the common people than the Peabody Fund. It makes me feel good to look at your catalogue. You deserve the praises of all classes of the people.—Z. B. WARNER, Yadkin College, North Carolina.

Thousands of blessings on the man who invented printing, thousands more for him who uses that invention for the benefit of his fellow-countrymen. The books which I have received from you are wonderful volumes for the money.—D. B. CONKLING, Pastor Congregational Church, Whitewater, Wis.

Standard Books.

History. Macaulay's "England" reduced from $7.50 to $1.25; Gibbon's "Rome" from $9.00 to $2.00; Grote's "Greece" from $18.00 to $2.00; Rollin's "Ancient History," $1.75; Mommsen's "Rome," Green's "England," Guizot's "France," Menzel's "Germany," Carlyle's "French Revolution," Schiller's "Thirty Years' War," Creasy's "Battles of the World," preparing, equally low in price.

Fiction. *One* book by each of the great authors who have won classic fame—life is too short to read all their works, but you can read *one* of each. Extra cloth bound, large type, 30 to 50 cents each. Scott's "Ivanhoe," Dickens's "Copperfield," Eliot's "Romola," Bulwer's "Pompeii," Kingsley's "Hypatia," Ebers's "Uarda," Hughes's "Rugby," Irving's "Knickerbocker," Cervante's "Don Quixote," Hugo's "Les Miserables," Thackeray's "Newcomes," Cooper's "Mohicans," Le Sage's "Gil Blas," Goethe's "Wilhelm Meister," Richter's "Titan," De Staël's "Corinne," Macdonald's "Alec Forbes," Mulock's "John Halifax," Bronte's "Jane Eyre," Turgenieff's "Father and Son," Reade's "Love Me Little."

Biography. Twenty-eight standard books reduced in cost from $43.50 to $8.50; among other works being those of Carlyle, Macaulay, Gibbon, Lamartine, Michelet, Smiles, Plutarch, Liddell, Arnold, etc.

Poetry. Shakespeare, large type, 3 vols., $1.50; Milton, 40 cents; Dante, 30 cents; Virgil, 30 cents; Homer's "Iliad," 30 cents; Homer's "Odyssey," 30 cents; "Light of Asia," fine edition, 25 cents; Hemans's, 60 cents.

Literature. Chambers's "Cyclopædia of English Literature," reduced from $9.00 to $3.00; Taine from $10.00 to 60 cents; Macaulay's "Essays" from $7.50 to $1.50; "Modern Classics," five vols., from $5.00 to 40 cents; Froissart's "Chronicles" from $3.00 to $1.50, "The Koran" from $2.75 to 30 cents; "American Patriotism," 50 cents.

Juvenile. *Finely Illustrated*, at 40 cents each. "Arabian Nights," "Robinson Crusoe," Bunyan's "Pilgrim's Progress," "Æsop's Fables," "Munchausen and Gulliver's Travels," "Cecil's Natural History," reduced from $3.75 to $1.00. Stories and Ballads, 50 cents, "Kurl in Queer Land," 50 cents.

Religious. Young's Great "Bible Concordance" (Spurgeon says Cruden's is child's play compared with it), reduced from $15.00 to $2.00; Geikie's "Life of Christ," from $8.00 to 50 cents; Kitto's "Cyclopædia," from $10.00 to $2.00; Smith's "Bible Dictionary," from $3.00 to 50 cents; "Josephus's Works," $1.50.

Miscellaneous. "Pictorial Handy Lexicon," 250 illustrations, 17 cents, "Health by Exercise," 40 cents; "Health for Women," 30 cents. "Cure of Paralysis," 30 cents. "Sayings by author of Sparrowgrass Papers," 30 cents. "Leaves from Diary of an Old Lawyer," $1.00.

Beautiful Homes. Scott's "The Art of Beautifying Suburban Home Grounds," reduced from **$8.00** to **$3.00**, one of the finest books ever published in this country. Beecher says: "There is no other book that can compare with it for the wants of common people." Geo. Wm. Curtis says: "Is so full of good sense and fine feeling that it should be in every village library."

Revolution Pamphlets.

Only books of the highest class are published by us, and the prices are low beyond comparison with the cheapest books ever before issued. To illustrate and demonstrate these truths, we send the following books, all complete and unabridged, post-paid, at the prices named:

Macaulay's "Life of Frederick the Great." Former price, $1.25. Brevier type, price 3 cents.
Carlyle's "Life of Robert Burns." Former price, $1.25. Large brevier type, price 3 cents.
"Light of Asia." By Edwin Arnold. Former price, $1.50. Beautiful print, brevier type, price 5 cents.
Thos Hughes's "Manliness of Christ." Former price, $1.00. Beautiful brevier type, price 3 cents.
"Mary Queen of Scots' Life," by Lamartine. Former price, $1.25. Brevier type, price 3 cents.
"Vicar of Wakefield." By Oliver Goldsmith. Brevier type, beautiful print, price 5 cents.
Bunyan's "Pilgrim's Progress." Bourgeois type, leaded; beautiful print, price 6 cents.

Descriptive catalogue sent free on request. Remit by bank draft, money order, registered letter, or by express. Fractions of one dollar may be sent in postage stamps. Address

AMERICAN BOOK EXCHANGE,

JOHN B. ALDEN, MANAGER. **Tribune Building, New York.**

AGENCIES: Boston, R. L. Hastings; Philadelphia, Leary & Co.; Cincinnati, Robert Clarke & Co.; Indianapolis, Bowen, Stewart & Co.; Cleveland, Ingham, Clark & Co.; Toledo, Brown, Hager & Co.; Chicago, Alden & Chadwick, 224 State street; in smaller towns the leading bookseller, only one in a place.

PERSONAL ITEMS.

Justice Hunt, of the United States Supreme Court, is slightly improving.

Justice Clifford, of the United States Supreme Court, suffers from softening of the brain.

Col. Mosby, United States Consul at Hong Kong, will arrive in this country in February next.

Capt. Joseph Wilson, on the Alabama during the war, was killed in a Florida railroad accident.

Mlle. Jeanne Bernhardt, sister of the famous Sarah, arrived in New York on board the French steamer Labrador.

D. J. Murphy, a wealthy resident of San Francisco, has been given the title of Marquis by the Pope in recognition of his great services to religion.

Judge Key, ex-Postmaster General, with his wife and daughters, has arrived at Havana from Cedar Keys. They expect to remain three or four days.

Some of Senator Lamar's friends doubt very much if that gentleman will ever be able to reoccupy his seat in the Senate or participate in its proceedings.

Professor W. H. Jordan, of the Maine State Agricultural College, has been elected to the Chair of Agriculture and Agricultural Chemistry in the Pennsylvania State College.

By direction of the President, Major-General Winfield S. Hancock, U. S. A., has been assigned to duty according to his brevet of major general, to date from December 4, 1880.

Mrs. Senator Logan superintends her husband's correspondence, dictating to a stenographer for hours at a time. She also assists the Senator in collecting materials for reports and addresses.

Mr. Longfellow can take a worthless sheet of paper and by writing a poem on it make it worth $50. That's genius. Mr. Vanderbilt can write fewer words on a similar sheet and make it worth $50,000,000. That's capital.

[Pittsburg Evening Chronicle]

Dangers to Iron Workers.

Mess. H. Esterbrook & Sons, City Iron Foundry, Boston, Mass., speak on this point as follows: Two or three of our men were badly burnt in working. They were, however, immediately cured by using that valuable remedy, St. Jacobs Oil. All our men are highly pleased with it, and we shall always recommend it to those afflicted with pains or rheumatism.

New Publications.

KIDNEY-WORT

The Only Medicine

That Acts at the Same Time on

The Liver, the Bowels and the Kidneys.

These great organs are the natural cleansers of the system. If they work well, health will be perfect; if they become clogged, dreadful diseases are sure to follow with

TERRIBLE SUFFERING.

Biliousness, Headache, Dyspepsia, Jaundice, Constipation and Piles, or Kidney Complaints, Gravel, Diabetes, or Rheumatic Pains and Aches,

are developed because the blood is poisoned with the humors that should have been expelled naturally.

KIDNEY-WORT

will restore the healthy action and all these destroying evils will be banished; neglect them and you will live but to suffer.

Thousands have been cured. Try it and you will add one more to the number. Take it and health will once more gladden your heart.

Why Suffer longer from the torment of an Aching back? Why bear such distress from Constipation and Piles?

KIDNEY-WORT will cure you. Try a package at once and be satisfied.

It is a dry vegetable compound and

One Package makes six quarts of Medicine.

Your Druggist has it, or will get it for you. Insist upon having it. Price, $1.00.

WELLS, RICHARDSON & CO., Proprietors,
10 (Will send post paid.) **Burlington, Vt.**

Liquid KIDNEY-WORT

In response to the urgent requests of great numbers of people who prefer to purchase a **Kidney-Wort** already prepared, the proprietors of this celebrated remedy now prepare it in liquid form as well as dry. It is very concentrated, is put up in large bottles, and is equally efficient as that put up dry in tin cans. It saves the necessity of preparing, is always ready, and is more easily taken by most people. Price, $1 per bottle.

LIQUID AND DRY SOLD BY DRUGGISTS.

CLARK'S IMPROVED ROOT CUTTER

PERFECTION OBTAINED IN

CUTTING ROOTS

This Cutter has *received* the First Premiums *at every Fair,* and has no *equal.* Do not fail to examine it.

The Neatest, Strongest, Simplest, Cheapest, and most Perfect Root Cutter in the Market.

This Cutter is built with a heavy oak frame, well bolted together; is staunch and strong, neatly finished, handsomely striped and ornamented. The cutting apparatus consists of *twenty-five steel knives* (gouge shaped), so arranged on a wrought-iron shaft that they are perfectly secure; no chance of becoming loose or breaking. The roots are neatly cut in pieces suitable for feeding. No coarse, ungainly pieces are left by this Cutter. A boy can easily cut 35 to 40 bushels per hour, so easily does it do its work. ☞ Don't fail to examine it.

We are manufacturing three sizes, designated by numbers.—1, 2 and 3.

Nos. 1 and 2 designed for hand use.

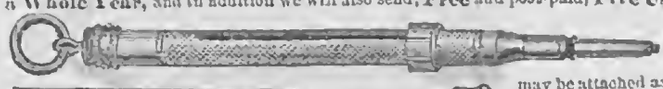
The Greatest Offer of the 19th Century!

TWO Periodicals for the Price of One, and Five Valuable Premiums FREE! Wishing to introduce our two charming literary and family periodicals, **The Fireside at Home** and **The People's Home Journal,** into every household in the United States where they are not already taken, we make this grand unparalleled offer: Upon receipt of **only One Dollar** (the regular price of *The Fireside at Home* alone), we will send **Both Periodicals for a Whole Year,** and in addition we will also send, **Free** and post-paid, **Five Useful and Valuable Premiums,** as follows:



1. An Elegant Rolled Gold Propelling Pencil. This beautiful pencil is of fine rolled gold plate, handsomely chased, warranted to wear for years, suitable either for lady or gentleman, may be attached as a charm to your watch-chain with excellent effect, and is altogether a most useful and valuable article. **2. A very Handsome Autograph Album,** neatly bound with handsomely embellished covers, and containing over 60 pages of fine, heavy paper for autographs, sentiments, etc. **3. A Beautiful Amethyst Finger Ring,** the band being of fine gold plate and the setting a beautiful amethyst stone; the ring is suitable either for lady or gentleman and will be admired by all. **4. A Useful Specie Pocket Purse.** This purse is made of fine grained leather, with steel clasp, is strong and durable, and will be found of the utmost convenience for carrying silver and small change. **5. A Handsome Silver Plated Thimble,** heavily plated with pure coin silver, will last for years, and looks just as well as a solid silver thimble. Our two periodicals are the largest and finest published, and are just what is needed in every family for amusement, entertainment and instruction. *The Fireside at Home* is a large and charming magazine of 16 large, 3-column pages, with handsome cover; *The People's Home Journal* is a large, 16-page, 48 column paper. The contents of the two are entirely different, and they contain, in every number, hosts of beautiful illustrations, Serial and Short Stories, Sketches and Poems by the best authors, Useful Knowledge and Valuable Information upon every subject, Wit and Humor, Household Decorations, Fashion Notes, Sermons by leading divines, Farm and Garden Topics, Household Receipts, Puzzles, Games, News of the Day—in fact, everything to delight, amuse and instruct the whole family, and all strictly pure in moral tone. *Remember, for One Dollar, we send a year's subscription to both these valuable publications, and likewise the entire list of five splendid premiums.* This is the greatest and most liberal offer ever made by any publisher in the world! None should fail to take advantage of it! We guarantee every one **Three Times the Value of Money Sent,** and *to all who are not perfectly satisfied, the money will cheerfully be returned.* As to our reliability, we refer to any publisher in New York. Now is the time to secure this unparalleled bargain! To any one who will show this advertisement and get up a club of five, we will send an extra subscription, with the premiums, free! Address, **F. M. LUPTON, Publisher, 27 Park Place, New York.**
